Tworig molding 'Ponky' to its original stature

The Metropolitan District Commission-run facility was not a priority. Ponky became almost legendary for its scruffy appearance. It was also cast in a less-than-flattering light in a Sports Illustrated piece.

What had caused the decline of this once-proud golf course? The almost unanimous answer: politics.

"The MDC neglected it," said Dick Haskell, executive director of the Massachusetts Golf Association. "It generated money, but they never put the money back into the course."

Former Ponky pro Kenny Campbell tells a story that typifies the lack of care the course received. When the course's aerator was beyond repair, the superintendent put in a request for a new one. "The MDC said they had money in the budget to repair, but not to buy," said Campbell. So the superintendent called the maintenance people at the other MDC course, Leo Martin Memorial in Weston, and asked if he could borrow their aerator.

"They laughed," he said. "Said theirs had broken three years earlier, so they hadn't aerated the greens in three years."

Then there was a February '91 fire, and the facility's 80-year-old clubhouse was destroyed. Despite the abuse heaped upon Ponky, the elder Tworig couldn't discourage his son from taking on the challenge.

Tworig accepted the job and went to work last Sept. 1. "I look at it this way: How many guys get the chance to work on a Donald Ross course? That's a thrill. To try and bring it back is a challenge."

Thus far, he seems to be more than up for the challenge. "I've

If you can imagine

Behind every remarkable golf course is a remarkable imagination. And at JacklinGolf, we don't think your design should be limited by anything — least of all your grass seed.

JacklinGolf was created exclusively to take your course farther than it's ever been before.

With advanced seed and the technical resources that help your turf establish faster, look better and play longer. From the first proprietary seeded bermudagrass and innovative zoysiagrasses to improved perennial ryegrasses. And breeding and research

ORLANDO, Fla. — Want to put a nice "finish" on your sand bunkers? Check out the "broomed" traps at Grand Cypress Golf Club. But beware, warns superintendent Tom Alex, once golfers play out of them, they won't want to go back to hand-raked bunkers ever again.

Taking an idea from former assistant Steven Sorrell and working with shop manager B.J. Spinks, Alex has modified a John Deere bunker rake, putting a weighted broom, that is hinged and floats, on the back. Voila! Sand bunkers that are consistent and without furrows.

"As a golfer you get real spoiled by these bunkers," Alex said. "You can really put a nice finish on them with the brooms."

The brooms, he said, "create consistency."

The biggest problem with regular bunker rakes is the furrow they make, he said. "For one golfer, the ball might sit up and be perfect. For the next guy, the ball might be in the furrow. So you get inconsistency within each bunker. "Also, the correct bunker is designed so balls get to the flat portion. Nobody wants an uphill lie on a steep face. So you want a firm surface so when a ball lands in the bunker, it trickles all the way down and doesn't get hung up in a furrow."

When Grand Cypress used the brooms for the Chrysler tournament last fall, "it worked well," Alex said. "Now we've incorporated it into our maintenance practice."

The idea came about one day when Sorrell, who is now superintendent at Colleton River Plantation in Bluffton, S.C., "was playing around with a little push broom and said, 'Boy, that's a great finish.' We just took it one step further," Alex said.

Experimenting with brushes of different widths, Alex decided 24- or 18-inch are best. No wider, he said, "because as you work the faces, with too wide a broom you start bridges and not the middle."

It takes about the same time to groom a bunker as with a regular rake, Alex said.

The only drawback with the broom method, he said, is that some bunkers may firm up too hard because maintenance crews are working less than the top half inch of sand. "So wet bunkers, especially, can get hard," he said. "We just watch them. If they start to firm up, we go back to the regular tractor manufacturer's rake for awhile. And we hear gripes about it when we do."

Alex said the brooms can be used the majority, if not 100 percent, of the time. "It works well in our sand. But it depends on different situations," he said. "It won't work so well in wet or powdery sand. "In the Northeast it's a lot different. But it's easy to find out. Just experiment with a hard bristle push broom."

Ponky's Tworig

Continued from previous page

never seen the course in better shape," said one member. "The greens are excellent," said Neville. "Rich has made it a great place to play again."

Tworig understands that money doesn't flow as freely when the state controls the purse strings as it would at a private course, where rich men will okay nearly any expenditure if it assures them pristine golfing conditions. At Ponky, he has 11 full-time workers for 36 holes. The irrigation system needs replacing, and there's always equipment he'd like to have. His job would be easier if 700-800 rounds weren't played every day.

"It's a public course," he reasoned. "You just do the best you can. Jane has been great, and I've got no complaints."

"You don't turn around in one year and fix 20 years of neglect," said Connolly. "We want to put Ponkapoag on par with other good public golf courses, and fortunately we've been given the tools to do it."

Now, she said, 45 percent of the revenue generated by Ponkapoag will go back into the course, where before it went into the general fund — to be used for anything from pools and skating rinks to education and welfare.
