Johnson on his own, eyes int’l canvass

By MARK LESLIE

MT. VERNON, Wash. Despite what he calls a "glut of golf course architects" around the world, Tom Johnson is testing the waters by opening his own design firm here.

The 39-year-old North Carolinian, who has worked the past seven years with Denis Griffiths and Associates in Braiselon, Ga., is concerned about the future of his profession.

"Weekly, there’s somebody putting up their shingle," he said. "There is a glut of architects, not only in the U.S. but around the world. Is it going to take a golf recession to slow that down? I question whether the business can support all these people. How long is it going to last?"

Johnson already has three projects in planning — one in the Seattle suburb of Conway and two in Japan, where he has worked for most of the past 13 years, first with Gary Player and Ron Kirby from 1981-83. The North Carolina State graduate, with degrees in turfgrass management and landscape architecture, also labored as a job superintendent with Wadsworth Golf Construction Co. from 1983-87 in the Midwest and Texas before joining Griffiths.

"The difference in capabilities of golfers is so vast," he added. "You play with people who shoot 118 and then you play with one-handicappers the next day. The same golf course just does not work. You’ve got to decide not only what the site dictates, but what the client wants. Then you have to go after the best golf course. It’s not going to work for the entire golfing population."

Griffiths. The member of the American Society of Golf Course Architects has his own ideas on golf design, declaring: "The one problem I have with most designers is that they say they can build a course everybody can play. I dispute that. The flat statement that everybody is going to enjoy [a certain] course, or that you’re going to make it playable for everybody, is a misnomer."

Q&A: Robinson’s design cup overfloweth

Continued from page 33

GCN: How did waterscapes become such an important part of your work?

TR: It started in the Coachella Valley [near Palm Springs, Calif.]. I'm doing my 23rd course there now [Tahquitz Creek] for the city of Palm Springs. The developers of Sunrise CC [in Rancho Mirage] 15 years ago sent out questionnaires to 13,000 golfers. They asked them to pick their nine favorite holes in the area. Eight of them had water. We learned from that. We try to incorporate the sight and sound of water. It’s one hazard that does not slow up play. The key is to give golfers a way around it, to give the high handicapper an out.

GCN: With the water shortages in many parts of the country, is it becoming more difficult to get water features approved?

TR: Lakes actually save water. It takes 104 inches of water annually to keep grass green in the desert. If a lake is properly sealed, it loses just 64 inches to evaporation. So you save water by using lakes and ponds instead of grass.

GCN: What is your design philosophy?

TR: We want our courses to be as natural as possible, challenging for the low-handicapper but not discouraging for the high-handicapper; rewarding for the good shot but not overly penal for the bad one... We need to accommodate so many pin placements. You can change average scores on a hole by as much as half a stroke through pin placements. There are two ways to build a course. First, there is the trial-and-error method, where you rough things out, move some dirt, look at it, then play it again if you want to change something. It's creative, but it can be costly to keep moving things around. We use the second method, working everything out on paper or the computer. It's less expensive because you move things once and that’s it.

GCN: How do you view the role of the superintendent?

TR: A good superintendent can take a mediocre design and make it look very good. He can also take a great design and make it look pretty bad. The designer and superintendent are dependent on each other. I like to get the superintendent involved during construction so he can point out maintenance issues we need to consider. GCN: How involved is Ted Jr. in the business?

TR: He is used to the Wells Fargo Bank, so he’s very helpful from the financing end. In fact, we’re looking at financing a course of our own in the LA area. He’s also been computerizing everything around here. He’s going to be a darn good architect before long. We’ll make sure he has several more courses under his belt before applying for ASGA membership.

GCN: What is the future of golf development?

TR: It depends on the economy. Things certainly aren’t as hectic around here as they were a few years ago. A lot of our courses are pending because of a lack of financing.

GCN: Has the Asian market helped pick up the slack on the domestic side?

TR: Definitely. We have a course going in Jakarta, another one pending in South Korea and one in Tomato, Japan, that will open this fall. Environmentalists are a threat to Asian development. They’re clamping down in some areas. There’s a growing feeling that golf courses are detrimental. We have to combat that by bringing in environmental consultants early, publishing research on the safety of properly applied pesticides, and preserving wetlands by incorporating them into the design.

Vintage Group plans half dozen ‘downtown’ projects

Continued from page 33

"We want to replicate, for the most part, what we’ve done here, with the same unique practice area," Tourtellotte said. "We want to focus on being a learning center and to promote teaching. We have two nationally recognized instructors — Mike McGettigan and Don Hurter. We’ve got some very high-tech teaching facilities, with indoor and outdoor ranges. We will have covered, heated tee stalls this fall. You can practice your long game on the driving range, your short game on the par-3 course, and your chipping and putting on a 7,000-square-foot green and sand-side bunkers.

Dye Designs International of Denver designed the par-3 course here and will be given first consideration for design of the future projects, Tourtellotte said. "Perry has done a great job here and one of the things he does very well is par-3s, especially on tight sites," he said.
