Audubon research: golf and wildlife

Continued from page 13

A research will augment, rather than duplicate, one another, Dodson said, adding that the USGA Green Section supports the Audubon effort.

"Wildlife Links exclusively looks at wildlife on golf courses," he said. "We will look at that but many other things as well. We are revolving everything around sustainable management: plants, waste, technology, energy efficiency... We want scientists and others to look at our principles of sustainable resource management and see if they are adequate, if we have the answers to put these principles on paper and try to hold land developers to those standards.

"Wildlife Links is focusing on broad-brush wildlife and golf research projects. I'm interested in more long-term wildlife biology efforts." — Ron Dodson, ASNY president

Courses, which the USGA will sponsor. The literature review will determine "what holes there may be in research as it relates to private landowners and golf courses," Dodson added. "My job is to get funding to make the research happen."

The ASNY mission is research, education and information exchange, Dodson said, adding that its personnel will conduct workshops and seminars, and share computer bases with government agencies and others to foster good decisions in finding and developing appropriate land. ACSRSM will be a mechanism to fulfill that mission, he said.

Meanwhile, ASNY officials are proceeding over the next 10 to 12 months to incorporate Audubon International Signature as a not-for-profit association that will become the parent organization of ASNY and its various programs. ASNY has hired zoologist Nancy Richardson to run the Signature Program from a technical point of view. Her office is at 3045 Alves Ferry Road, Henderson, Ky. 42420; 502-546-9419.

"We will put together a budget and have the opportunity for individuals, corporations, associations to become sponsors of the Signature Program and of the Audubon International Center for Sustainable Resource Management," Dodson said. "Some of that money will be put toward research. We may have grants available and will be looking for research associates.

Tee & Green Sod

Whether your challenge is a dead-line, a tee, a green, a fairway, a rough, or a bunker surround, we have a blend that fits your needs.

We understand the variety of problems you face because we have spent a great deal of time listening to golf course superintendents. As a result, Tee & Green Sod offers the most complete product line available to the golf course industry—even a four-foot wide washed roll! Give us a call for information about our selection of products, and our unique harvesting and washing techniques.

• Bentgrass
• Bluegrass
• Washed sod
• Bluegrass-Rye grass
• Bluegrass-Fine Fescue

N.Y. Audubon launches environmental, agronomic service program

By MARK LESLIE

CARY, N.C.—The Audubon Society of New York State (ASNY) has launched a national conservation service program to provide environmental and agronomic service to members of its Audubon Cooperative Conservation System (ACSS).

Called Audubon Conservation Services (ACS), the program "will promote environmental land management and conservation of natural resources through on-course education and services for ACSS-member golf courses," said ASNY President Ron Dodson.

"Every aspect of the ACS program will promote sustainable resource management objectives dedicated to maximizing the quality and playability of the golf courses while minimizing environmental exposure."

Using a team approach, it will deal with course management issues through environmental planning; wetlands, water-quality and storm-water management; fertilizer and pesticide programs; and agronomic and environmental integration.

ACS will not compete with the U.S. Golf Association Green Section advisory services, Dodson said, because "we are going to be doing things they normally don't look at."

In fact, Green Section National Director Jim Snow, giving "100 percent endorsement" for ACS, has asked Audubon personnel to do "a training session for their people this fall," Dodson said. "We will develop a check list for their regional agronomists to use when they do their turf advisory visits. They will look for things that we are going to focus on, such as maintenance complex design, washdown areas and pesticide storage."

The cornerstone of ACS is to provide technical leadership by professionals with agronomic and environmental experience in golf course development and management. It will be led by senior scientist Dr. Miles (Bud) Smart and Dr. Charles H. Peacock. Each has more than 17 years of experience in his field.

Collectively, they have provided services at more than 100 golf course and land-use projects.

"Additionally, doctorate-level scientists will provide expertise in areas of aquatic ecology, toxicology, risk assessment, environmental statistics and modeling, wetlands ecology, hydrology and remote sensing," Dodson said. "GCCA-certified superintendents will provide expertise on a regional basis." The specific services ACS will offer are:

• Development of written plans for Integrated Pest Management and Best Management Practices (BMP) to develop an ecologically based approach to course management as well as incorporate BMP's to protect ecologically sensitive areas.
• Risk assessment to select the best materials for effective fertilization and control of pests in order to integrate sustainable resource management objectives.
• Constraints analysis for selection of pesticides and nutrients.
• Monitoring programs to develop systematic measures to assess golf course and environmental interactions.

The result, Dodson said, is a low-risk approach to golf course management and pesticide use.
