Environmental alliance elects super as president

WAYNE, N.J. — The Alliance for Environmental Concerns recently elected a new board of officers at its annual meeting. Those included, Arnaud Le Sage, golf course superintendent at White Beeches Golf and Country Club, president; and John Buchner of Lawn Doctor, vice president. Other officers include Thomas Little, treasurer; and S. Howard Davis, executive director of the N.J. Nursery and Landscape Association, as recording secretary.

The following directors were also elected: Steven Chip (United Horticultural Supply), Wayne Dubin (Bartlett Tree), Michael Olyewski (Ciba Turf), Kenneth Kubik (Grass Roots), Richard Sameth (Western Industries).

Also elected to serve were: Paul Powandra (Princeton Meadows Country Club), Robert J. Scott (DowElanco), Joseph Bianco (Green Thumb Services), and Lee Graber (TrueGreen/Chemlawn).

The alliance is a broad-based coalition of turf professionals, arborists, structural pest control experts, Christmas Tree growers and represents a majority of pesticide applicators and pesticide applicator businesses in New Jersey.

A superior to any traditional ferti

For greens, tees, low-cut fairways and other high-quality turfgrass areas, Scotts® Triform® technology offers you more efficient nitrogen feeding compared to traditional urea formaldehyde (UF) or IBDU fertilizers.

▲ The Agronomic Advantage.

What makes Triform technology different is the patented process that replaces highly water-insoluble nitrogen with the shorter-chain, controlled-release methylenediamine (MDU) and dimethylenetetraurea (DMTU).

These compounds allow more efficient use of nitrogen and provide faster particle breakdown on application to the turf. Nutrients release steadily and safely over a wide variety of soil types and weather conditions, with more predictable controlled release, more total available nitrogen, and more consistent response.

▲ The Physical Advantage.

Triform's homogeneous chemical composition provides a more consistent nitrogen release than you can get with physically blended fertilizers. With Triform, you'll see immediate and residual improvement in the quality, color and density of the turf, with quick greening and uniform color response for 8 to 12 weeks of feeding.

And Triform granules disperse readily on contact with water, without the material "gumminess" that causes particles to stick to spreaders, mowers, golf balls and golfers' shoes. So plant-available nitrogen is not removed from the turf.
