USCCA to offer clubs group buying option

By PETER BLAIS

PREPARED, Mich. — A recently formed organization designed to cut costs and increase efficiency at private clubs has ruffled a few feathers among other golf associations. The main focus of the United States Country Club Association (USCCA) is a group purchasing program called the Cooperative Alliance for Purchasing (CAP), according to Jeffrey Dykhouse, USCCA's founder, president and sole stockholder. CAP reportedly leverages the buying power of USCCA member clubs to provide the best possible price for products and services such as insurance, maintenance equipment and supplies, food and beverage products, office equipment, irrigation materials and equipment, golf

TAKING A BYTE FROM CONSTRUCTION TIME

Architect Brad Benz claims he's speeding up the construction process 30 to 35 percent by using a computer-generated drafting system. The latest example is a British project known as Duke's Den. For stories, see page 29.

COURSE MAINTENANCE

Off the Record: Pesticides don't rub off

Q&A with USGA agronomist Tim Moraghan

Pro-active, mountain maintenance paves way for late spring opening

K EYSTONE, Colo. — While golf courses elsewhere across the northern tier of the country are taking off green covers and tending to new young turf in April, superintendents like Steve Corneillier at Keystone Ranch Golf Course are snowblowing their greens clear in May.

"The term 'spring start-up' takes on a whole new meaning here," said Corneillier, whose been keeping to this upcountry regimen for decades. "This is the name for young golfers, Jack Nicklaus is starting a network of Golden Bear Golf Communities featuring semi-private, daily-fee golf courses.

First out of the gate will be Golden Bear Golf Club at Laurel Springs, north of metro Atlanta in southern Forsyth County. Ground was broken in April. Watch for future communities in Dallas, Chicago, Detroit, Tampa and Nashville, said Golden Bear Financial Services President Ira Fenton, who is well spent; sometimes it may as well have been flushed down the toilet. Who, for example, dreamed up the Ford Probe, a product aimed ostensibly at young women on the move? Unfortunately for Ford, marketing executives believe the name tends to remind young women of pending trips to the gynecologist.

The Probe may be the golf course superintendents' equivalent to an herbicide called Leech-Rite. While the dollar value is modest in comparison, suppliers to the golf course industry also spend a great deal of time and money on the formulation of product names. Perhaps because of their sheer number and the often thankless nature of their functions, seed varieties and turf chemicals are tops when it comes to invention. Is it coincidence that so many seed varieties share names with automobiles? "Mustang, Falcon, Dasher, Fiesta,继续 on page 28

Sticks & Stones: Firms play the name game

By HAL PHILLIPS

The automobile industry annually spends millions of dollars researching model names that will catch the fancy of consumers. Sometimes the money is well spent; sometimes it may as well have been flushed down the toilet. Who, for example, dreamed up the Ford Probe, a product aimed ostensibly at young women on the move? Unfortunately for Ford, marketing experts believe the name tends to remind young women of pending trips to the gynecologist.

Keystone Ranch Golf Course crew member Jeff Adams clears off a green. Adams, whose hometown is Cape-Elizabeth, Maine, is used to late springs, but not like this.

Keystone tackles late-late winter

Continued from page 1

Keystone’s longest spring. At mid-month, the Keystone region’s snowpack for May was 192 percent of normal, including another 30 inches in May, and more was expected. It’s no different at Copper Mountain and Breckenridge — two other mountain courses in the region.

At Keystone Ranch there exists two entirely different conditions. “On the front nine, lower and with more sun exposure, we have gone into a rapid melt-down,” Cornneillier said. “We hit 72 degrees yesterday and went from two feet of snow to nothing in 36 hours. All the spring runoff from the mountains flows through our lower nine holes, and therefore has pushed the lake and Soda Creek out of their boundaries. So we have one large body of water on the lower nine in the fairways where the ducks and geese and waterfowl are having a great time.

“On the back nine, we’re still in winter. It’s back in a valley that is very shaded by the mountain peaks and gets less sun.

In a normal year Keystone opens the front nine around May 20 and the back nine May 26. “We’re shooting for June 2 and 9,” Cornneillier said.

In preparation, his crews first had to snowblow the snow off the greens. Then came aeration. Then, on May 11, mowing — on greens surrounded by a sea of snow. Mowing was necessary because grass should not be cut more than 30 percent of its length.

Because the irrigation heads were still buried in ice, water was pumped from the “lakes” onto the greens in May.

“We are two to four weeks behind [schedule] in the field, depending on what we want to get accomplished,” Cornneillier said. “We can’t get any heavy equipment off the cart paths.

“We’re still not up to full staff because there hasn’t been enough work on the actual turf to execute. We’re hand-raking the tee boxes, tee surrounds and green surrounds. But we can’t get sweepers out.”

Ideally, Keystone’s crews sweep and rake the entire course before mowing. This gets the air circulating and the grass standing up — so the mowers don’t just flatten it down.

Some greens have been under turf covers to keep the winds from drying off the crown of the plant and to maintain a more constant soil temperature throughout the day and evening.

... Judging the health of his turfgrass going into last winter as better than ever, Cornneillier attributed it to “a better aeration and plant nutrition program. Those were the best things we have changed dramatically. We’re seeing less snow mold and less winter desiccation.”

Based on continued soil and water sampling over the last three to four years, Cornneillier’s crew changed the balance of all the macro- and micro-nutrients.

“We also did more and more aeration of tees, fairways and roughs throughout the entire season,” he said. “We’re applying more fertilization programs to our roughs as well, due to the expectations of our resort golfer.”

Now it’s full bore ahead into 1995 in the Rockies. At least for a short while.

“Historically, we will start to get our winter snows in September and will have two or three storms,” Cornneillier said.

“Those early snows will melt off by noon the following day. We start getting snow accumulation around mid-October.”

Unless, of course, on July 4 they get a repeat of 1993.

Show ’em Where to Stick It ... With “Trash Mates” Recyclers.

You’re looking at the most convenient, cost efficient, environmentally friendly way to handle player-generated waste on your course.

Trash Mates get players to separate their cans right on the course — so you don’t have to later — thanks to the restricted opening in the snap-on, “Cans Only” lid.

A second Trash Mate handles the rest of the trash — over 9 gallons of it. And, they accept common bag liners for quick, no-mess emptying.

Contact your Par Aide dealer today. Order Trash Mates for your course. They’ll enhance your image as a friend of the environment.

PAR AIDE

More Mounting Versatility Than Any Other Trash Container . . . By Far!

Unique, Universal Mounting Brackets Offer Many Choices:

- Two Trash Mates Center-Mounted on a 2” Pipe
- Two Trash Mates Offset-Mounted on a 2” Pipe
- One Trash Mate Single-Mounted on a 2” Pipe
- One Trash Mates Mounts on Any Vertical Surface
- Three Lid Choices: “Cans Only”, Large Trash or No Opening
