By Jim Connolly

The King of England believed that playing golf and fute ball (soccer) interfered with the practice of archery, which was the common defense at that time. His decree went largely ignored and his loyal subjects continued to play golf in spite of possible punishment. It is reported that Mary Queen of Scots, perhaps the Alice Dye of her day, was playing golf immediately after her husband's death. She claimed it eased her mourning. Sometime later, in 1603, King James I decreed that golf could be played but church must also be attended. Forbidding the game may have slowed its growth, but golfers' hearts and souls were branded with balls in flight and swishing clubs.

The game spawned some very serious followers as well. In 1595, a young boy was hung for stealing golf balls. The same year, a golfer burgled his caddy with a niblick club for giving bad advice.

The Royal and Ancient Golf Society of St. Andrews was formed in 1754, and in all its pomp and ceremony, formalized the game by creating a small number of basic rules. In its raw form, golf was still a game that consists of the golf course, implements (clubs) and a ball. Balls and implements used to strike the ball were similar for all golfers, but the differences between golf courses was great! This makes the game of golf unique in that the player is called upon to adapt to a number of situations. Conditions on golf courses varied greatly, depending upon rainfall, wind, the presence of grazing animals (the first lawn mowers), the type of grass — if any — and a number of vastly different land features.

Golf courses varied greatly because there were no uniform methods of maintenance. This all changed in 1832 with the invention of the mechanized lawn mower. The mowers equalized the playing fields somewhat, but big differences still existed due to differing geographic location. Ransomes, Simms and Jefferis began marketing the first reel mowers, introducing a dramatic change to the game of golf. The height of the grass was no longer dependent upon animals' appetite. Still, conditions varied greatly because this was the only form of maintenance available.

The golf clubs manufactured at this time are evidence of the conditions that prevailed on the courses. There were clubs for hitting out of wagon ruts, deep holes and all kinds of imperfect situations. Different clubs today are primarily manufactured with varied lots for distance and height. When was the last time you selected a club for hitting out of a wagon wheel rut or a horse's hoof print? The given environment and ball position forced the golfer to adapt to club selection and execution of the golf shot. It should be noted at this time that putting, and the putting green as we know it today, did not exist.

Part II of a series

During this period, the putting green began to take on a more familiar shape and could be considered a "separate" part of the golf course. A brief account of how the game was played would help to clarify how this came about. In the early days, the golfer played to an area where a stick or pole in the ground, marked the finishing point of a single golf hole. The golfer finished the hole by either hitting the ball into a hole of nondescript size, or against a pole in the ground. The golfer could then start the next hole by leaping from an area only a few yards away from the previous finishing point. The "putting green" and "tee" in those days were very close together, and difficult to distinguish one from the other.

The lawn mower, and better maintenance techniques, eventually led to the distance of tees and greens. In 1836 a special club was designed for "putting" and aptly named the putter. It was desirable for the green to have closely cut grass, if grass was present, and golfers became experienced at putting with specially designed clubs suited for this purpose.

Tom Morris, famous greenkeeper of old, was born in 1821 and maintained golf courses from 1850 to the early 1900s. He was affectionately known as "Old Tom." Old Tom believed the proper maintenance of the putting green involved frequent, light sand top dressing and no play on Sundays! Old Tom understood the benefits of regular mowing and top dressing to keep the surfaces true and predictable.

Ironically, Old Tom was known around the country as a terrible putter. One of his golfing competitors used to send him mail addressed "Misser of short putts.

Old Tom was normally mild-mannered, but was occasionally given to breaking golf clubs after he missed short putts. Fortunately, he preferred lemonade over Scotch!

Putters were becoming the acceptable club for use on greens, but conditions were still quite variable and players used a number of different clubs on the green. From the book Golf-Badminton Library, 1870, it is written: "He was unable to use a cleek for the bad lying putt, these he negotiated with his iron."

After finishing a hole, golfers reached into the hole on the putting green to gather the ball, and they usually did so on the next hole. This led to a wide range of hole sizes and must have been cause for many ruling problems.

In 1891, an ingenious greenkeeper found a piece of 4 1/4-inch clay drain tile that he pushed into the hole, thus setting the size of the hole. This occurrence leads one to believe that today's golf course evolved only by happenstance. The hole remains the same diameter today.

Golf courses being built at the turn of the century were designed with separate tees and greens and this was the form of architecture brought to the United States in the late-1800s.

The Best Sand. Because Sometimes More Of The Same Is Exactly What You Want.

Quality sand for the golf course. Consistent from one season to the next. That's important to you. And it's exactly what we deliver.

Bunker sand, topdressing material, construction blend, drainage gravel and more. Backed by technical know-how and outstanding service. Delivered on spec and on time direct from our quarries.

Call 800/237-4986 to order the sand you need now.

Maintenance

A HISTORY

The period 1457-1832

"Decreed and ordained thatfalse ball and
golf must be utterly crytudane."

King James II, March 6, 1657

Tennis roots: The game is said to have
derived from courtly lawn games like
tennis. Sometime later, in 1603, King
James I decreed that golf could be
played but church must also be
attended. Forbidding the game may
delayed its growth, but golfers' hearts
and souls were branded with balls in
flight and swishing clubs.

The game spawned some very serious
followers as well. In 1595, a young boy
was hung for stealing golf balls. The
same year, a golfer burgled his caddy
with a niblick club for giving bad advice.

The Royal and Ancient Golf Society of
St. Andrews was formed in 1754, and in
all its pomp and ceremony, formalized
the game by creating a small number
of basic rules. In its raw form, golf was
still a game that consists of the golf
course, implements (clubs) and a ball.

Balls and implements used to strike
the ball were similar for all golfers, but
the differences between golf courses
was great! This makes the game of golf
unique in that the player is called
upon to adapt to a number of situations.

Conditions on golf courses varied
greatly, depending upon rainfall, wind,
the presence of grazing animals (the
first lawn mowers), the type of grass
—if any — and a number of vastly
different land features.

Golf courses varied greatly because
there were no uniform methods of
maintenance. This all changed in 1832
with the invention of the mechanized
lawn mower. The mowers equalized the
playing fields somewhat, but big
differences still existed due to
differing geographic location. Ransomes,
Simms and Jefferis began marketing
the first reel mowers, introducing a
dramatic change to the game of golf.

The height of the grass was no longer
dependent upon animals' appetite. Still,
conditions varied greatly because
this was the only form of
maintenance available.

The golf clubs manufactured at
this time are evidence of the conditions
that prevailed on the courses. There
were clubs for hitting out of wagon
ruts, deep holes and all kinds of
imperfect situations. Different clubs
today are primarily manufactured
with varied lots for distance and height.

When was the last time you selected a club
for hitting out of a wagon wheel rut or a
horse's hoof print? The given
environment and ball position forced
the golfer to adapt to club selection and
execution of the golf shot. It should
be noted at this time that putting,
and the putting green as we know it
today, did not exist.

The period 1832 to 1900

During this period, the putting green
began to take on a more familiar shape
and could be considered a "separate"
part of the golf course. A brief account
of how the game was played would help
to clarify how this came about. In the
early days, the golfer played to an area
where a stick or pole in the ground,
marked the finishing point of a single
golf hole. The golfer finished the hole
by either hitting the ball into a hole of
nondescript size, or against a pole in the
ground. The golfer could then start the
next hole by leaping from an area only
a few yards away from the previous
finishing point.

The "putting green" and "tee" in those
days were very close together, and
difficult to distinguish one from the
other.

The lawn mower, and better
maintenance techniques, eventually led
to the distance of tees and greens.

In 1836 a special club was designed
for "putting" and aptly named the
putter. It was desirable for the green
to have closely cut grass, if grass
was present, and golfers became
experienced at putting with specially
designed clubs suited for this
purpose.

Tom Morris, famous greenkeeper of
old, was born in 1821 and maintained
golf courses from 1850 to the early
1900s. He was affectionately known as
"Old Tom."

Old Tom believed the proper
maintenance of the putting green
involved frequent, light sand top
dressing and no play on Sundays! Old
Tom understood the benefits of
regular mowing and top dressing to
keep the surfaces true and predictable.

Ironically, Old Tom was known
around the country as a terrible
putter. One of his golfing competitors
used to send him mail addressed
"Misser of short putts."

Old Tom was normally mild-mannered,
but was occasionally given to breaking
golf clubs after he missed short
putts. Fortunately, he preferred
lemonade over Scotch!

Putters were becoming the
acceptable club for use on greens,
but conditions were still quite variable
and players used a number of different
clubs on the green. From the book
Golf-Badminton Library, 1870, it is
written: "He was unable to use a
cleek for the bad lying putt, these he
negotiated with his iron."

After finishing a hole, golfers reached
into the hole on the putting green to
gather the ball, and they usually did
so on the next hole. This led to a wide
range of hole sizes and must have
been cause for many ruling problems.

In 1891, an ingenious greenkeeper
found a piece of 4 1/4-inch clay drain
tile that he pushed into the hole, thus
setting the size of the hole.

This occurrence leads one to believe
that today's golf course evolved only
by happenstance. The hole remains
the same diameter today.

Golf courses being built at the turn
of the century were designed with
separate tees and greens and this was
the form of architecture brought to
the United States in the late-1800s.
