Audubon name change
Continued from page 3

Motivators toward sustainable development. "The strategy should be in place by May or June, Dodson said. "I'm excited. It is helping us decide where we're going, define our programs and generate data."

Pebble Beach Co. Vice President Ted Horton, whose company had won a New York Audubon award, applauded the plan. He pointed out that when Pebble Beach was honored, area citizens gave it little notice because the citation came from a state organization 2,000 miles away. "Yet, the Audubon programs are truly international," he said. "This name change will better reflect the importance and broadness of the Sanctuary and other programs."

The Audubon Society of New York staked a claim in the golf industry when it teamed with the U.S. Golf Association to create the Audubon Cooperative Sanctuary Program for Golf Courses four years ago. Since then, it has added the Audubon Signature Sanctuary Program, for golf courses not yet built, and the Audubon Heritage Program, which is geared toward entire resorts.

A bird-watcher's awakening to golf course's influences
Continued from page 13

I was pleasantly surprised when Ray Davies, the golf course superintendent at Virginia CC, told me that he was using no non-degradable insecticides (as required by law) and that, in fact, the only insecticide he uses targets the cutworm moth larvae that are dug up by crows, which destroy turf in the process. (Since crows are notorious nest robbers of increasingly rare species, I can heartfeltly endorse efforts to drive them away.)

I saw a lot more than swallows on my morning tour, however. An intern of Ray's, a landscape architect student named Tonya, took me around on a (non-polluting and quiet) electric golf cart. I would bet that even the most ardent golfer would stop, at least briefly, to appreciate the beautiful black and orange hooded orioles we saw nesting in the club's Washingtonia palms. In the same general area, I spotted a Nashville warbler, at that time remarkably early in its fall migration from its nesting grounds in the Northern U.S. and Canada to its winter home in tropical Mexico or Central America.

I started to notice a good number of our native species — lesser goldfinches, bushtits, Anna's hummingbirds, scrub jays, northern mockingbirds, Coppers and black Phoebes. I imagined the area buzzing with birds during the spring and fall migration periods, in addition to the winter season, when many species congregate in our mild Southern California climate. I began to wonder if there was something different about this particular golf course, something that made it more wildlife-friendly than others.

I was partly correct. Looking around, I saw the wonderful old California Sycamore, the lovely Liquidamber and several other native or otherwise wildlife-friendly species. I realized the club is adjacent to both a botanical oasis called Rancho Los Cerritos and the Los Angeles River, both of which provide habitat and food for wildlife. I saw all the wildlife around me, and began to envision how much more there could be without compromising the functionality of the golf course; on the contrary, most of the things I had in mind were minor changes that would probably enhance the already considerable beauty of the place. And I began to realize that other golf courses, even those less favorably situated, could easily be modified to enhance their value to wildlife without compromising the golf course itself.

It turns out that Ray was way ahead of me on many, if not most, counts. Nearly all of the water used by the course is tertiary-treated wastewater (a small amount of city water is used on the perimeter to prevent salt buildup on the greens). The water that infiltrates the soil is modified by the thick, biologically active thatched grasses that evaporate or become transpired by the plants helps recharge the local groundwater supplies or to fill the ponds, which were teeming with mallards and which Ray tells me, harbor large numbers and several varieties of ducks as well as Canada Geese in the winter. Thus, the Virginia Country Club, though it utilizes a good deal of water, has very little impact on available drinking water supplies, and in some ways actually helps to improve the situation!

I'm hoping that some of the excess water that drains from the course could be used to replant and restore a portion of the native willow forests that once dominated the flood plain of the (unchannelled) L.A. River, in the currently dry, weedy area between the golf course and the concrete-lined river channel. It would greatly help support wildlife, and perhaps provide habitat for yellow-bellied sliders and other northern reptiles. We also imagine islands in the center of the club's ponds where the waterfowl and shorebirds that use the park can rest, and perhaps even nest, safe from disturbances by humans, foxes, or other predators.

Ray and I are in remarkable agreement as to which trees and other plants are desirable, even if we arrived at our conclusions differently. Cottonwoods, willows, and white alders are beautiful natives that shelter and feed migratory bird species. Silk floss and coral trees, though not native, have beautiful flowers and also happen to produce a lot of nectar, attracting some of our most beautiful migrant bird species. When less desirable trees die, they could easily be replaced by these and other valuable species (although it's important to leave a few dead trees standing at any given time if is to have a diverse tree species in the future). Lemonadeberries and toyon are both wildlife-friendly native shrubs that require minimal care and which could be used to vegetate and stabilize dry slopes in some areas of the park. And although the Virginia CC's well-cared-for turf, Ray uses a naturalized species of grass that is not only preferred by golfers but requires less care than other species. Ray has a plan for phasing out the non-native living and relocate the abundant, non-native red fox, which devastates native wildlife as well as, on occasion, golf greens. (I wish that there was an appropriate place to relocate this beautiful animal, but alas, these are lacking in the US for this europ-ean species.)

My experiences with Ray and Tonya reaffirmed a changing pattern in my approach to environmental activism. Certainly there are "good guys" and "bad guys" in the battle to save our environment's integrity, but a lot of the so-called bad guys may be merely uninform ed and thus unappreciative of the natural order of our biosphere. There then are those who we assume are "bad guys," who either never thought to care or who do not care, traditionally passed as such. This is dan-gerous and counterproductive. Tonya, for example, told me that she is interested in golf course management precisely because of her love of nature and her desire to see that golf courses are designed and maintained in a manner that is consistent with sound environmental principles. Ray, likewise, is working within the constraints of his existing golf course and his long-term constituency to educate both himself and (gently) others in order to facilitate their needs and desires, while making sure that Virginia Country Club is a good host and neighbor for humans and non-human allies. These folks in particular need our support, understanding, and ideas, for they are the ones who can truly initiate the changes we like to talk about.

Gast leaves USGA for Jupiter Hills
JUPITER, Fla. — Chuck Gast, who for four years has been an agronomist with the U.S. Golf Association (USGA) Green Section, has taken the position of head superintendent at Jupiter Hills Club here.

A Kansas State University graduate who had been superintendent for 13 years at Tascosa Country Club in Amarillo, Texas, Gast split his duties between the USGA's Florida and Southeast regions.

Don't forget the Hydro-Wet—all the choice you need to help ensure good infiltration of water and healthy, beautiful turf. Ask your distributor for Hydro-Wet by name.

Hydro-Wet®
Keeps Water In Its Place

Still Your Best Choice

Pro-Ap®
The only liquid siphoning applicator specially designed for calibrated application on golf courses.

Hydro-Wet
Concentrated liquid formula with long-lasting residual.

Hydro-Wet RTA
Ready-to-apply formula utilizes advanced siloxane copolymer technology.

Hydro-Wet TG Granular
Highest active granular product available for turf—22.5% active.

Hydro-Wet®
Keeps Water In Its Place

Gast leaves USGA for Jupiter Hills
JUPITER, Fla. — Chuck Gast, who for four years has been an agronomist with the U.S. Golf Association (USGA) Green Section, has taken the position of head superintendent at Jupiter Hills Club here.

A Kansas State University graduate who had been superintendent for 13 years at Tascosa Country Club in Amarillo, Texas, Gast split his duties between the USGA's Florida and Southeast regions.

He will be succeeded by Christopher Hartwiger, who is finishing his master's degree studies in agronomy at North Carolina State University.

Hartwiger, whose thesis was on light-weight rolling of bentgrass putting greens, has been teaching a class and working at the Pinehurst golf courses. A graduate of the College of William & Mary, he will be headquartered in Alabama.
