Info highway

Continued from previous page

Association (USGA) has joined the world of the Internet and Michigan State University's Turfgrass Information Foundation (TIGF) is on the verge of doing the same. A GCSAA site could provide a nearly instant and endless supply of information and advice for superintendents on everything from state and federal regulatory issues to academic research on turfgrass.

Web sites and on-line technology. It's all a long way from what Jon Scott and a few other computer-literate golf course superintendents were doing back in the mid-1980s with their Apple II desks and primitive software programs like Visicalc.

Scott, a superintendent for 16 years at Grand Traverse Resort in Michigan and Valhalla in Louisville, Ky., has been working for Jack Nicklaus' Golden Bear International Golf for seven years. He is currently a consulting agronomist.

"As it is in the business world," said Scott, "a computer is a necessity in managing any small or large operation. The cost and simplicity of the programs are such that there is no reason for the smallest golf course not to have a laptop or personal computer on the desk."

Scott was one of a small group of computer-literate superintendents in the mid-1980s that started Turf Byte, a superintendents computer bulletin board that is run out of Kansas City, Mo. That was before pre-packaged integrated software programs came along like TRIMS, which handle budgeting, inventory, work-order production, chemical and fertilizer record-keeping, soil testing data, and just about anything else important to a superintendent's day-to-day operations.

TRIMS is now one of several software programs available for golf course management and maintenance.

Another computer-related tool gaining use with cutting-edge superintendents are satellite weather systems, where a computer-like monitor and a point-and-click system that can be installed in the superintendent's office offers instant access to weather information.

"And now, of course, there's the Internet," said Scott. "The resources that are there are just the beginning. Every major research center or university is going to have a data base that you will be able to go in and download articles and agronomy pages."

Scott said the brave new world of the computer-clicking golf course superintendent could create prob-
lems for some.

"It's going leave some people behind," he said. "It already has. I don't know how we get around this. It happens in other industries with the technology today. The small-timers at places where their clubs can't afford to go to the seminars and conferences they're going to have to find a way to learn on their own, or they're going to get left behind in their careers."

"It's not a measure of how good a turf manager they are. It's a measure of how good an administrator they are."

GCS provides new 'window' on grounds maintenance

Baton Rouge, La. — Calling its GCS for Windows "the ultimate grounds care system," InCircuit Development Corp. has entered the world of "windows" in a big way in the golf industry.

GCS integrates several management sections including chemical/fertilizer, personnel, financial, weather/irrigation, inventory, calendar, math, vegetation library, references and work orders. Help buttons appear on every major screen.

Users can scan in photos of employees, inventory items and vegetation, while printed reports, complete with graphing and analysis, are customized with the course's logo.

A calendar program allows scheduling of important events for the staff which can be reviewed by day, month or year. The math element simplifies calculation of common areas and volumes.

Every conversion reference imaginable is included in the reference section, which also carries a full-color reference for pH and particle size charts.

More information is available by contacting InCircuit Development Corp., P.O. Box 80771, Baton Rouge, La. 70898; 800-963-1925.

CIRCLE #310

You're scheduled to put down herbicides this afternoon... but now there's a thunderstorm 50 miles to the west.

What do you do?

From deciding whether or not to apply chemicals... to turning on the sprinklers... or even scheduling your labor, weather impacts just about every course decision you'll make.

DTN WEATHER CENTER is designed to provide course managers with the time-sensitive — comprehensive — weather information they need to make the most economical and environmental decisions.

At the touch of a finger you'll have instant access to the most current weather maps and data available.

DTN WEATHER CENTER provides:

- "In-motion" radar maps updated every 15 minutes...showing national down to the county level precipitation intensity and movement
- 300 major city forecasts with projections in three hour increments for the next three days
- National lightning location
- Over 100 full color maps in all...updating continually and featuring everything from current conditions to 90 day outlooks.

DTN Weather Center supplies all the equipment you'll need... no computer is needed. And since the information is received through a small satellite dish — not through phone lines — you can use the system for as long and as often as you wish!

From "in-motion" radar to comprehensive forecasts...

DTN Weather Center lets you know how the weather can affect your operation.

DTN Weather Center

9110 West Dodge Road • Omaha, Nebraska 68114

CIRCLE #130
DTN: 19 regional maps, updated every 15 minutes

OMAHA, Neb. — "Providing unlimited access to comprehensive, time-sensitive weather information," says Data Transmission Network Corp. of its DTN Weather Center. A high-resolution color monitor, compact satellite dish and receiver and large data-storage capability are all supplied for a one-time $295 start-up fee and $64 per month.

DTN Weather Center provides comprehensive regional and national weather data, with more than 60 full-color maps. Its information comes from numerous sources, including the National Weather Service and "other specialized private providers," and is updated continually and automatically.

Nineteen regional radar maps indicate county-level precipitation updated every 15 minutes. Satellite cloud maps show cloud formations in South and North America and the Atlantic Ocean. All maps can be "zoomed-in" for up to 64 times magnification for site-specific analysis.

Temperature and precipitation outlooks for the next 24 hours are provided, along with current wind speed and direction, temperature, humidity and sky conditions.

For more information, contact DTN at 800-610-0777.

TRIMS draws from 10 years experience

PHOENIX, Ariz. — Drawing on 10 years of advice from golf course superintendents, TRIMS for Windows is a wide-ranging software program for professional grounds management.

TRIMS provides access to budgets and expenses, inventory and purchasing, personnel and labor, equipment maintenance, chemicals and fertilizers, fuel inventory, event scheduling, weather data, tree inventories, and other features.

While pull-down menus and toolbar icons help simplify the program, "browse tables" appear throughout TRIMS, allowing the user to view the contents of files or make selections from lists of personnel, equipment, inventory, etc.

The program gives an accurate picture of costs by time period, type of work performed, and type of asset. Hidden costs like aging equipment needing frequent repair can be quickly identified.

TRIMS can chart data entered manually or captured from automatic recording weather stations and services — including 13 conditions such as temperature, humidity, wind, precipitation and solar radiation.

GPS at the heart of Player Systems

CHARLESTOWN, Mass. — Using Global Positioning System and other technology, Player Systems is reporting success with its SkyCaddie information system as a tool to communicate with guests, manage traffic and build business.

The compact, golf cart-mounted personal video monitors give guests information a professional Caddie provides. From each position on the course, golfers are offered course graphics, suggested strategies, distances to targets and pace messages, pin placements and green contours.

Cart traffic is monitored from the clubhouse, allowing managers to take action before delays become problems.

More information is available by contacting Player Systems at 48 Baldwin St., Charlestown, Mass. 02129; 617-241-5253.

Palm-sized PinPoint shows precise position

WINSTON-SALEM, N.C. — Using Local Area Position Technology, as opposed to a Global Positioning System, PinPoint Technologies is manufacturing a palm-sized "position system" that helps speed up play, telling golfers to within one yard their distance to the cup.

The heart of the PinPoint Golf Course Ranging System is small fixed transceivers positioned outside the perimeter of the course. Two small ranging devices sit in a golf cart-mounted dispenser and can be removed and clipped to the golfers' belts. When a golfer needs distance information, he pushes a button on his unit and instantly obtains the distance to the pin, to the face of a hazard or other points of interest.

Thor Guard beats 'heat'

DETROIT — Thor Guard II Lightning Prediction System continually monitors and evaluates the electrostatic atmosphere. On a simple screen display it provides the specific risk of a lightning strike in the immediate area and can sound alarms and air horns, giving ample time for people to take cover.

More information is available from Thor Guard, Inc., P.O. Box 523727, Miami, Fla. 33152; 305-594-1074.

TR-224 AND TR-130 TURF ROLLERS

TR-224

The TR-224 is an exceptionally maneuverable roller, which shifts effortlessly from forward to reverse by pulling a single lever. Powered by a 5.5 h.p. Honda engine. 24"-wide rounded edge rollers.

TR-130

Compact and easy to operate, the 130 roller is powered by a 5.5 h.p. engine and features a hydrostatic transmission for smooth, easy control. 30"-wide rounded edge rollers.

TR-224

BROUWER TURF EQUIPMENT LIMITED

TURF ROLLERS
TO FIT YOUR NEEDS

Whether your challenge is a deadline, a tee, a green, a fairway, a rough, or a bunker surround, we have a blend that fits your needs.

We understand the variety of problems you face because we have spent a great deal of time listening to golf course superintendents. As a result, Tee & Green Sod offers the most complete product line

available to the golf course industry—even a four-foot wide washed roll!

Give us a call for information about our selection of products, and our unique harvesting and washing techniques.

- Bentgrass
- Bluegrass
- Washed sod
- Bluegrass-Ryegrass
- Bluegrass-Fine Fescue

Tee & Green & In Between

Tee & Green Sod INCORPORATED
**NEW TECHNOLOGY UPDATE**

**Golflink providing plethora of info**

**HERMITAGE, Tenn.** — The first complete weather, lightning and golf information service when it first surfaced, Golflink also provides subscribers with golf industry news, updates from golf associations, playing tips from pros, rules of the game and new product information.

The weather and lightning information offers a dozen different national and regional radar maps, temperature and critical weather maps — all updated several times an hour. The weather element offers an animated forecast map, regional/national action Doppler Radar from WSI; daily forecasts; national 48-hour precipitation forecast; past 24-hour precipitation review; six- to 10-day forecast; and 48-hour jet stream updates.

The system is tied to Global Atmospherics, Inc.'s Electrical Storm Identification Device (ESID).

Contact Golflink, 4811 Lebanon Road, Suite 107, Hermitage, Tenn., 37076; 800-290-3810.

**ESID offers lightning protection**

**TUCSON, Ariz.** — The manufacturer and distributor of a comprehensive line of lightning detection systems, Global Atmospherics, Inc. offers golf courses its Electrical Storm Identification Device (ESID).

Global Atmospherics and Course Alert, a sirens system, are providing an integrated system for golf courses.

ESID's 5-foot-high, solar-powered sensor and indoor display/controller is battery-operated and can be easily sighted. As well as cloud-to-cloud lightning, it detects cloud-to-ground lightning within 30 miles and thunderstorms within 10 miles.

More information is available by contacting Global Atmospherics, Inc., 2705 E. Medina Road, Suite 111, Tucson, Ariz. 85706; 800-283-4557.

**Tiny Rangefinder uses laser tech**

**COSTA MESA, Calif.** — A handheld electronic distance-measuring device, DME/Golf's Rangefinder brings laser technology to the 400-year-old game of golf.

Instead of walking to yardage markers in the fairways, golfers using Rangefinder can see the pin, bunker placements, green slopes and pro tips on how to play individual holes. Golfers can communicate with the clubhouse if they need assistance.

The clubhouse can also communicate with golfers, warning them to head for cover if a thunderstorm is moving in or to pick up their pace if they are lagging far behind the average 4-hour-9-minute round pace. Rangers are provided the same information and can inform slow golfers of the need to hurry along.

**Finch high on Prolink & added income it creates**

"We've cut 20 minutes off the average round," Finch said. "That represents a lot more product we can market."

Finch is equally excited about the potential maintenance benefits. The system tracks the usage of Emerald Dunes golf car fleet, allowing Finch to rotate the machines so that all receive equal use. A computerized course map available on clubhouse and maintenance center screens — or at any computer — allows the superintendent to track golfers and turn on sprinklers, as needed, in golfer-free areas. Prolink is also working on a system that would allow the superintendent to better track pesticide applications.

The superintendent would patrol the course in a golf car with a lap-top computer at his side. Coming across an area of disused turf, he could circle the area on the computer-generated image of the course and punch in the disease. The computer would list the chemicals available in the storage building that would be effective against the disease. The superintendent would enter the chemical to be used, the amount and time of treatment. When the pesticide applicator returned at the appointed time, the equipment application would not operate until it was over the designated area and would only deliver the amount of chemical specified by the superintendent.

**WEI P ALM BACH, Fla.** — Ray Finch, owner of Emerald Dunes here, is sold on the Prolink system his upscale, daily-fee operation recently installed.

Prolink provides golfers all the course information they need — yardages to the pin, bunker placements, green slopes and pro tips on how to play individual holes. Golfers can communicate with the clubhouse if they need assistance.

The clubhouse can also communicate with golfers, warning them to head for cover if a thunderstorm is moving in or to pick up their pace if they are lagging far behind the average 4-hour-9-minute round pace. Rangers are provided the same information and can inform slow golfers of the need to hurry along.

**IF You Can't See The Benefits In A Clear Fungicide, Then You're Not Looking Hard Enough.**

We'd like to make one thing perfectly clear: next to new Banner MAXX, no other broad-spectrum fungicide even compares. It's the world's first transparent fungicide.

Simply put, Banner MAXX is the best tank-mix partner. It has the same properties as water. It won't clog filters and has no odor. And unlike other fungicides, Banner MAXX isn't phytotoxic.

Even more impressive is the fact that Banner MAXX controls 18 turf diseases, including dollar spot, summer patch, and more. For more details, call 1-800-395-TURF.

Because no matter how you look at it, Banner MAXX isn't like any fungicide on earth. But you can see that for yourself.
ProShot monitors, speeds play, increases income

BY DONNA LEA HAWLEY

GAINESVILLE, Fla. — "We have three big issues," says Mike Moran, head golf professional at Haile Plantation Golf and Country Club here. "Providing amenities to our members, speeding up play, and monitoring where our carts are. Installing the ProShot system helps us with all three."

The ProShot system was installed at Haile Plantation in late 1995 and it was one of the first of 100 Club Corp. of America courses scheduled for this program. Installation included a survey of the golf course that mapped each fairway, green, bunker, and other major features, installation of a small satellite dish on the clubhouse, a computer in the pro shop, and a small antenna and display unit on each golf car.

ProShot was installed as an amenity for members at Haile. "We aren't concerned about recovering the cost from our members and haven't increased fees," Moran said. "I think if a course needed to recover the cost of installation, players would pay an additional dollar for green fees to pay with it."

Moran finds that ProShot helps speed up play. Before the system was installed, players used time to look for yardage markers on the sprinkler system; now they get an exact readout in the cart. Players no longer have to pace off a distance or take time guessing. If each player saves only five seconds per shot a foursome can save 30 minutes in playing time.

The club can also monitor slow play using ProShot. The computer monitor in the pro shop provides a number of displays including a map of the whole course showing the location of all the carts. "If we see a group of carts on the 6th hole, for example," said Moran, "we can call a ranger and ask him to go clear up the problem. We can also send a message that will appear only on one cart's display asking them to pick up their speed of play."

The club can also use the system to monitor its carts. If one goes into a restricted area, a club employee can send a message to that cart to remind the player to stay on the cart path.

CIRCLE #21

Small office, tall order

Continued from page 38

When you bring your computer home, and its attachment, printer, modems, you need to plug it in. (Make sure you purchase a computer with an internal modem; it avoids needing its own outlet.) First buy a quality surge protector, not an outlet strip. Estimated cost: $25. This will protect your computer equipment.

Also, check with your electrician to see if you can have a dedicated circuit breaker for all your computer equipment. There's nothing like having an arc welder on line with your office equipment.

• Modem/Fax: Most computer users now have an internal fax/modem (cost: $150). You can send and receive faxes and log on with the modem to Turfbyte, TurfTalk, Mbyte, TGIF, or even surf the Net. The nice feature about a computer fax and its software is multiple-faxing. Let's say you have created a report for the green committee. You want to fax it out to all eight members. With the software, you need only click the modem button and each member will receive the fax.

• Printer/fax copier: Devices that so often were only at the clubhouse now should be in everyone's office because of new technology. Thanks to Hewlett Packard, one machine does it all. I own the Hewlett Packard "OfficeJet" ($899). It faxes, prints and makes copies. New versions can also scan. I'd recommend this machine for everyone because of its versatility and high quality.

• Switching device: With limited outlets, it's necessary to purchase a surge protector, protecting circuit breakers, and using outlet strips. Don't overload. What do you do with a phone line that needs to dial, fax or modem? I use a switching device from Comshare ($175). Your main phone line hooks into the device. Then the switching device determines — through the sending tone or lack of a sending tone — if an incoming call is a phone call, a fax or a modem wanting to access your computer. Buy the best switching device. I've been burned buying the $49 box which claimed it could do it all, yet did a "Patty Melt" on my desk on its first phone call.

As with purchasing any piece of equipment, determine your needs. There's a great deal out there that you can overpay for that won't meet your desires. Develop a relationship with your local computer store and use them as a resource. It took us awhile to figure out what to purchase and how to use it all. We now run two computers, a printer, two faxes, a modem, and a local computer bulletin board out of a small two-outlet office.
