Inform uninformed of winter chores

By GLENN PETERS

In the years that I have worked as a golf course equipment technician, people always ask me: "What do you do all winter?" This is the question I am asked most frequently, both by people who play the game and those who seem to think that there couldn't be very much to do once the temperature drops and the snow flies.

What follows is a brief synopsis of what happens at the Sunset Ridge Country Club maintenance facility during the winter months.

First and foremost, I prioritize what equipment will be worked on and in what order. Once this is done, the work begins with a visual inspection of each machine for obvious problems and, then, a thorough pressure washing is done. Hoods, fenders and body panels are removed to clear any accumulation of grass and dirt.

The most important aspect of our maintenance program, which affects both course playability and condition, is the sharpening of the cutting units. All cutting units, from greens to rough, are sharpened during winter maintenance. Oil changes, lubrication, tune-ups and overhauls are performed at this time as well. As the maintenance on each piece of equipment is completed, it is inspected again and then waxed. Waxing of turf equip-

Dr. Milt Engelke is project manager of the Turfgrass Breeding, Genetics and Management Program at Texas A&M University, where his major emphasis is developing turfgrass for the arid and semi-arid regions of the South and Southwest. He released Prairie buffalograss in 1989 (the first turf-type buffalograss), three strains of creeping bentgrass (Cato, Crendon and Mariner) and four strains of zoysagrass (Pilusidas, Crowne, Cavalier and Diamond). Engelke earned his PhD in plant breeding from the University of Wisconsin/ Madison in 1974 and received the Golf Course Superintendents Association of America Distinguished Service Award in 1994.
