Alamo okayed in California

GREENSBORO, N.C. — The United States Environmental Protection Agency (EPA) has registered Alamo systemic fungicide in the micro-injection application system for use in the state of California.

Alamo, which fights oak wilt and Dutch elm disease, will be available in individual 10-milliliter units that are inserted directly into the tree's flare roots. The Alamo micro-injection units provide "closed" delivery system, which greatly reduces the potential for user and environmental exposure during application.

Application time is also shortened with this delivery method which economizes the application process.

In addition to oak wilt and Dutch elm disease control, extensive field control of scab on crabapple trees and anthracnose on sycamores has led Ciba to apply for an expanded Alamo label that would include these new diseases.

EPA amends WPS, heaps praise on Monsanto Corp.

Continued from p. 47

glish and Spanish language statements regardless of the workers' ability to read either language.

The United States EPA has registered five organizations, including Monsanto Corp., for their accomplishments in "green chemistry".

Monsanto Corp. was honored in the category of "Reducing waste from manufacturing and reducing toxicity of materials used in manufacturing." Specifically, the firm was feted for creating a new process to manufacture the widely used pesticide, Round-Up.

Monsanto switched from a well-established process using hazardous substances — including formaldehyde, ammonia and cyanide-based chemicals — to a new, highly innovative process that eliminates these more toxic substances from the pesticide, replacing them with more benign chemicals.

Jacobson assists course in need

FRANKVILLE, Wis. — Fire not only destroyed the maintenance facility at South Hills Country Club late Thursday night, July 11, it destroyed most of the firm's turf care equipment therein.

However, the next morning Jacobsen Division of Textron, Inc. and neighboring superintendents were there to help.

Much of the machinery destroyed was Jacobsen mowing equipment used to maintain the greens, tees, fairways and roughs at South Hills, an 18-hole daily-fee course west of Racine where Jacobsen is headquartered.

Accordingly, members of the Jacobsen test department provided South Hills interim use of a Greens King V triplex greens mower, a Tri-King triplex trim mower and a Turfcat out-front rotary and LF fairway mower.

"I'm impressed that Jacobsen was so eager to help — they helped me get back on my feet," said South Hills superintendents head John Syty, who added that area superintendents also offered their assistance. "I thought it was excellent. I never expected help that fast."
