Frank’s Bermudagrasses beat the odds — heat, drought, intrusion...

BY GORDON WITTEVEEN

APLES, Fla. — It quickly becomes obvious that Paul Frank is a man of the earth. His weathered tan indicates a long-time association with the land, the plants and the wildlife. It all started when, as a youngster, he helped his father with the farm chores and, in the process, developed a love for nature. The Franks raised cattle on their Florida homestead and, through hard work, prospered.

In the early 1970s, father and son decided to turn the farm into a golf course. With the help of architect Arthur Hills, they created Wilderness Golf Club and Paul Frank became the first and only superintendent. A quarter century later, it is hard to imagine that this golf course was once a farm. The holes seem to have been carved from a tropical forest, and the ponds appear to be natural extensions of the nearby Everglades. God made it so, but with a lot of help from Frank.

A tour with Frank of his golf course proves he is no ordinary superintendent. We stop frequently and get down on our hands and knees to inspect the grass. On a particular green, Frank gets out his long, pointed jack knife and pries into the soil, carefully lifting a stolon of Bermudagrass turf. “See,” he said, “look how vigorous it is,” pointing at the sprouting grass plant and the tiny leaf blades growing at every node.

Twelve years ago, during a particularly bad time for any kind of grass to survive, Frank noted a patch of green grass on his 11th green. He took a few sprigs from this patch and planted them in a flower pot in his office. Within eight weeks, the new grass had overgrown the flower pot.

Realizing he had found something new and unusual, Frank transplanted the contents of the pot to a 2-foot-square tray. The new grass quickly filled in the tray, and from there it was only a small step to a plot in the nursery. Eventually, the 11th green was entirely converted to the new grass. And, since that time, five additional greens have been reseeded as well.

Frank baptized the new hybrid Bermudagrass, “PF-11” — the initials of its discoverer and the place of its birth, the 11th at Wilderness.

Several of the greens at Wilderness have become shaded by the growing trees that surround them. The PF-11 appears to stand up well to these conditions and its vigor is undeniable. It is such a strong grass that there is not 419 Bermudagrass intrusion into the PF-11 green that has been in place for more than 12 years. A golf ball rolls smoothly on the PF-11 greens, but then the other greens putt just as well.

We stop at yet another green and again inspect the grass. “Close your eyes,” he said. “Now feel the grass, touch it, gently slide your fingers back and forth. Now, does that not feel like bentgrass?”

We’ve Made Better Faster.

Express Flags From Fore-Par.

When the race is on to get flags for your golf course, get to the finish line first with Fore-Par. Our Express Flags service combines exceptional delivery time with Fore-Par’s renowned quality workmanship, innovative design, durability and ease of maintenance.

Because all manufacturing is done at our facility, Express Flags can meet your deadlines without compromising the quality that has made Fore-Par the consistent choice of golf course superintendents around the world. When you place your order, you might find our normal delivery time quick enough to satisfy your demands. If not, just ask for Express Flags service and we’ll do what you need, when you need it.

So if you’re in a hurry, flag down the fastest flag service available. For your free Fore-Par catalog along with information and Express Flags service rates call our toll-free number today!

DISTINCTIVE GOLF COURSE ACCESSORIES

grasses, or to simply leave it alone and let the Northern golfers play on native turf. The problem is, when cool nights occur, the Bermuda turns off-color and golfers conclude there must be something wrong with the greens. The golfers at Wilderness respect their superintendent’s knowledge and accept his decision not to overseed the greens nor the fairways. On the tees, Frank compromises and overseeds with poa trivialis.

At nearby Royal Poinciana, Gary Grigg follows the same regimen. The greens have all been resprigged with a new hybrid variety called Quality. The Bermuda greens provide a slick putting surface and tight lies on fairways.

Steve Durand, superintendent at Quail Creek, has overseeded greens, tees and fairways in accordance with his members’ wishes. Quail Creek is a sea of green. It looks magnificent, but the overseeded greens tend to be a little slower than their Bermuda cousins, and the raised lies on the beautifully groomed fairways make it possible for the older golfers to “get at the ball.”

Tim Hiers, at Collier Reserve in Naples, would like for his golfers to putt on Bermuda greens, but he is not satisfied with the quality of the present turf. Therefore, he is experimenting with Quality, and it looks promising on his practice green.

All supers agree that Northern grasses have a place on their tees, but most would prefer to play hybrid Bermuda fairways and greens if only their Northern golfers would let them.

And then there is Paul Frank at Wilderness. The man who discovered his very own grass and does not have enough of it to accommodate all 18 greens. His golfers are patient and willing to wait. The remaining seven greens will be sprigged with PF-11 in the summer of 1997.

Brown Patch And Dollar Spot Give You Two Choices.

Do a lot of explaining.

Prevent them with ProStar® and ProStar® Plus.

TWO excellent preventative/curative fungicides with different control spectrums.

PROSTAR® Fungicide controls both brown patch and dollar spot. A premix that utilizes the lowest labeled rates of PROSTAR® and Bayleton®, the combined “synergistic” action is more effective than either agent alone. And it provides up to 30 days protection, even at these lowest labeled component rates.

PROSTAR® PLUS™ Fungicide controls both brown patch and dollar spot. A premix that utilizes the lowest labeled rates of PROSTAR® and Bayleton®, the combined “synergistic” action is more effective than either agent alone. And it provides up to 30 days protection, even at these lowest labeled component rates.

PROSTAR® and PROSTAR® Plus both have premeasured water-soluble packaging. Both are non-phytotoxic to all fine turfgrasses, and neither will interfere with growth regulator programs.

Go with the obvious choice for best results.
