PUBLIC GOLF ROLLS ON

After 1990, new golf course openings began to pick up steam. Public golf, specifically daily-fee golf contributed most to the upsurge in golf course development. See page 3 for more stats on the growing public golf arena.

A FINE FINISH

Kyle Phillips liked this course so much he moved there. The 18th at Granite Bay (Calif.) Golf Club is an example of Phillips’ work with RTJII. See story on Phillips’ new solo career, page 33.
National Seal gets ISO, GAI OK

AUROPA, Ill. — The Quality Control Laboratory at National Seal Co.'s Galesburg, Ill., facility successfully passed an audit by TUV Rheinland of North America and was awarded ISO 9003 certification by Deutscher Akkreditierungs Rat (DAR-Germany).

"Having a quality system conforming to ISO 9003 gives us a strong edge in the worldwide marketplace where certification is almost a prerequisite for doing business, especially in the European Community," said Lance Reed, quality assurance manager for National Seal, a manufacturer and installer of polyethylene lining and piping systems for waste and liquid containment.

The ISO 9000 series of standards was created by the International Organization for Standardization (ISO) to simplify the international exchange of goods and services by developing a common set of quality requirements. ISO 9003 is the quality systems standard focusing on final inspection and testing of manufactured product.

NSC-Galesburg documented and demonstrated compliance to all sixteen elements in ISO 9003 including internal auditing, timely corrective action, the handling of customer complaints, and a comprehensive laboratory calibration program.

National Seal's equipment applications include ponds, lagoons and reservoirs.

The company's Quality Control lab also passed an audit by the Geosynthetics Accreditation Institute - Laboratory Accreditation Program (GAI-LAP).

GAI-LAP provides credibility to laboratories showing compliance with equipment and documentation for specific standard test methods. GAI-LAP also verifies that an effective quality system exists at all accredited laboratories.

Toro vs. G&H

Continued from page 1

According to Larry Buckley, Toro's attorney, "What we believe was stolen is the concept of the assembly; in turn, opening a great opportunity for a universal assembly based on the inside knowledge that Grizzle gained over his years at Toro."

At the end of November, 1996, Toro sought an injunction through the U.S. District Court in Los Angeles to remove certain Bear sprinkler products from the market until the time of trial. The Court denied Toro's injunction.

During the first week in June, 1997, Judge Takesugi released the Court's conclusion, stating that Toro did not have sufficient admissible evidence to support its claims that Grizzle & Hunter stole trade secrets.

"We're sitting in a good position right now," said Pam Wagner, an attorney from Luce, Forward, Hamilton & Scripps LLP, the law firm handling the case Grizzle & Hunter. "The main focus of this lawsuit wasn't so much about money as it was about Toro trying to put our client out of business. We already knew the judge found some problems with their evidence. But from our standpoint, the hearing in November, 1996 was the most important case."

Like Wagner, Toro is also confident that its case has enough evidence to win at trial. "Toro has carefully considered the situation and made the decision that it must take protective action when Toro's proprietary technology and information is at risk," said Rick Parod, vice president and general manager of Toro's irrigation business.

"Unless there's a delay or settlement, we'll be ready to go to trial on September 23," added Buckley.
