AERA-vator®

The Tool Versatile Enough for Golf Course Aerification, Seeding or Renovating

"We were in need of aerating our new 27-hole golf course and the native soils to the north being sandy/rock, I was raising the bearings on our crawl space, I was raising the bearings on our crawl space. Luckily I requested a demo of the AERA-vator and found the right tool to help our situation. It lowered the soil, gave it the much-needed air and pushed rocks down without disrupting the playability. I ordered one immediately for our course and have implemented a program exclusively for the AERA-vator. I also like the durability of the tines, it uses so little time and effort which translates to dollars. Thanks again for such a great product." — Gary Femrite, Golf Superintendent, Pebble Creek G.C., Becker, MN

What are Turf Pros Saying about PennMulch?

"Establishing new bentgrass greens is a time-consuming and costly process. This spring we put in 10 new greens at River Ridge with play targeted to start in early fall. We used PennMulch as a matching cover for the seed. The results were impressive. Not only was germination superior but PennMulch also stabilized the soil surface and was simple to apply. An unexpected benefit from using PennMulch was the retention of the sand base during the first mowing. The second phase of the construction will be completed later this spring and we have specified the use of PennMulch for the remaining greens. Quite simply, PennMulch provides the insurance I’ve been looking for." — Tony King, Superintendent, River Ridge Golf Club, Raleigh, NC
