**Growth necessitates a larger facility at GrassCraft**

PORTLAND, Maine — Grass-Craft, Inc. has leased a new warehouse/office facility and will move all manufacturing and administration operations as of Jan. 3, 1997. The new mailing and shipping address is GrassCraft, Inc. 87 Bell Street, Portland, Maine 04103; telephone 1-800-760-1680 or 207-878-5353; fax 207-878-9109.

According to a spokesman, the new location will double the size of both manufacturing and office space. This should allow Grass-Craft to keep up with what company officials call "a growing demand" for its hovering mowers.

With 15 new dealers representing territories all over the U.S. and Canada, Grass-Craft doubled its sales volume in 1996. With this established network of dealers and customers, the company says, it is ready to "move into an exciting future." The new facility is expected to allow Grass-Craft to keep up with the growing demand for its hovering mowers.

distribution, and sales channels of Agro-Tech 2000 products will remain unchanged. Peter van Drumpt, chief executive officer of Agro-Tech 2000, emphasized the importance of the merger for its customers.

"This merger brings a potent new combination of skills and science to the market," he said. "The difference for our customers is that now a wider range of more effective natural products will be available, such as a calcined diatomaceous earth inorganic soil amendment with microbial inoculant, a microbial pond clarifier with an oxygenator included, and plant-based insecticides and fungicides, among others.

"These new products contain only naturally occurring beneficial microbes," he added. "We do not believe in genetically altered products, which may have unknown consequences over time."

The Organica research and development team is lead by Raj Mehta, whose experience in microbiology includes positions with Smith Kline Beecham, Rohm & Haas, and other chemical and pharmaceutical organizations. Mehta is responsible for developing the proprietary technology behind this new generation of biologically-active products. Supporting Mehta is a team of 17 scientific advisors and bio-process engineers, including leading microbiologists from both the business and academic arenas.
