Aiming for a different sort of relevance

The real fear in writing a farewell column is pure ego: You’re flat out terrified that people will immediately forget about you, perhaps before they even finish the column. This is the anxiety my keyboard and I carry with us this month. This is my last column as editor of Golf Course News and, I’ll admit it, I’m desperate to hold your attention all the way through.

Unfortunately, I’ve nothing terribly sexy to dangle before you, no revelations hidden in the final paragraph, no scandals to disclose... Except for that pending corporate merger I’ve known about for weeks. But that was “off the record,” and why share a stock tip that could prove so lucrative?... I suppose I could divulge the names of those superintendents who stakedpold now-banned mercury-based pesticides a few years back. But that’s not even illegal... Come to think of it, there is that swing tip Tiger shared with me on the beach in Cancun, but who would believe me?

There are a few things I should get off my chest, while I still have the forum. To keep it interesting for you, I’ll try to be as provocative as the bounds of good taste will allow:

• Discussions of slow play bore me to distraction. Has anyone admitted to slow play, ever? It’s always the foursome ahead, or the foursome ahead of them, blah blah blah... Until golfers stop taking themselves so seriously, the situation will never improve.

• On a related note, how many times have you heard guys bitch about “that woman” in the foursome ahead. Or about the inappropriate clothing “those kids” are wearing. Aren’t these the demographic groups golf has targeted as vital to its growth, the groups we must attract if the industry is to expand? Golf must eventually reconcile its interest in growth with its reverence for tradition. Do we want golf to grow, or would we rather everyone wore a collared shirt?

• For a state with so many golf courses, Florida has precious few good ones.

• All the self-appointed purists out there routinely take pot shots at golf cars, the profits from which have made possible Dr. Beard’s comments, the point that golf industry does not boast a great array that easily meets this criteria. When it comes to maintenance, the groups we must attract if the industry is to grow, the companies that provide every bit as much turf performance, additional maintenance in the way of extremely low mowing, added aeration, verticutting, and top-dressing to provide an acceptable surface. This would be equivalent to one promoting a new car that performs well but requires the owner to change the oil every 500 miles.

There are other varieties on the market that are significant improvements over Penncrest that provide every bit as much as an advancement in improved putting green turf without excessive maintenance. One variety that easily meets this criteria is L-93. L-93 is not a niche grass, it doesn’t need excessive maintenance like the A’s and G’s, and it has shown to provide exceptional turf performance.

L-93 is the number one variety in the NTEP trials for 1995 and 1996 and has produced exceptional disease resistance. Your editorial was based on comments made by Dr. Beard as presented at the Canadian Turf Conference in March in Montreal. As a man of science, why would Dr. Beard omit mentioning the No. 1 rated NTEP variety? Why would he not mention an improved variety with impressive qualities?

Dakota Peat and Equipment of Grand Forks was one of the more fortunate businesses in the area. The company did suffer some damage to three buildings in the region during this series of disasters. Many employees were displaced by the flood waters and the mandatory evacuations. These employees were given time off to take care of personal needs and make suitable alternative living arrangements.

But business activity never stopped at Dakota Peat and Equipment, the company’s location on the edge of the city kept the main offices and plants high and dry from flood waters. Shipments of Dakota Peat and Dakota Equipment continued to go out during the height of the disaster.

As a matter of fact, peak shipments for the rebuilding of Lambeau Field, home of the World Champion Green Bay Packers, was cut out the week of April 22. By Thursday, April 24, Dakota Peat and Equipment was back operating on a regular basis.

THE GAME’S GREATEST RESOURCE

ORONTO, Ontario — What would Gene Sarazen tell Donald Ross if the venerable elder golfer were to meet the venerable golf course designer?

"Your game is too far away from your greens." That tidbit came from Mr. Sarazen’s grandson Jeff, who stood in for him in accepting the 1997 Donald Ross Award from the American Society of Golf Course Architects here.

It was a fitting acceptance by a fitting one from one of the game’s grand classics — people, that is, not courses. Gene Sarazen is now 95 years old, and for many decades he has exemplified what is good about the game.

Those at the ASGCA’s Donald Ross banquet were sorry he could not attend. And it gave stock to pause and reflect on who we have in this industry, how long we will have them, and who stands in the wings to take their place as golf’s next generation of “venerable old men.”

It is good news. Think about it: This sport/game/hobby is blessed beyond all others, I believe, in its number of men and women of character. A list would more than fill this page, single-spaced and tightly wound. There are seminal humanitarians, people of integrity, and many with brilliance and skill beyond hitting golf balls. Honoring them with awards is wonderful. And yet, not enough awards exist to honor them all.

Thank you, Mr. Sarazen, for the generation you have stood tall among your peers, and in society in general.

Dr. Noel Jackson of the University of Rhode Island is a favorite speaker among superintendents. An entertaining Scotsman.

Three quips from his recent speech in Maine:

• A micron equals 1/1000th of a millimeter, or “about half the height you guys are mowing at.”

• Fusarium patch disease is big in England 12 months of the year.

• The first adjustable bedknife? Check out the upper gums in the mouth of one of your neighbor’s sheep.

Talking about the gene gun and molecular genetics, former New Mexico State University Prof. Arden Baltsen-perger at Seeds West, Inc. said: “One of the ladies who works here crossed sunflower and bean.” What did she call it? A sunbean.

WHEN IT COMES TO MAINTENANCE, ISN’T LESS MORE?

To the Editor:

In response to your editorial in the April 1997 issue concerning the new A&G varieties and Dr. Beard’s comments, the point I find most disturbing is that this is in this day and age of trying to introduce products to the marketplace that require less input for maintenance, the new Tee to Green A and G varieties are looked upon as being acceptable, even though they would require a superintendent to provide additional maintenance in the way of extremely low mowing, added aeration, verticutting, and top-dressing to provide an acceptable surface. That would be equivalent to one promoting a new car that performs well but requires the owner to change the oil every 500 miles.

There are other varieties on the market that are significant improvements over Penncrest that provide every bit as much as an advancement in improved putting green turf without excessive maintenance. One variety that easily meets this criteria is L-93. L-93 is not a niche grass, it doesn’t need excessive maintenance like the A’s and G’s, and it has shown to provide exceptional turf performance.

MORE LETTERS ON FACING PAGE

A series of natural disasters struck the Red River Valley of the North region during the winter and spring of 1997. This region borders parts of North Dakota, South Dakota and Minnesota. Eight blizzards hit the region during the season, including an ice storm and blizzard in early April that knocked out electrical power to more than 1000 people in the area.

The record snows from these blizzards and some of those businesses stopped at Dakota Peat and Equipment ended the company's location on the edge of the city kept the main offices and plants high and dry from flood waters. Shipments of Dakota Peat and Dakota Equipment continued to go out during the height of the disaster.

As a matter of fact, peak shipments for the rebuilding of Lambeau Field, home of the World Champion Green Bay Packers, was cut out the week of April 22. By Thursday, April 24, Dakota Peat and Equipment was back operating on a regular basis.

Obituaries

ARTHUR SNYDER
1898-1997

TUCSON, Ariz. — Arthur Armstrong Snyder, who along with his three sons was a AA Life Member of the GCSAA, died here on March 12, from complications from pneumonia. He was 98.

Born Sept. 13, 1898, Mr. Snyder was a certified golf course superintendent and raised three superintendents: Arthur Jack, who is also a golf course designer, James H. and Carl H. All three survive him. His wife Margaretta died in 1989.

Starting as a caddie at Oakmont in 1907 when he was 9, Mr. Snyder was in the golf business for nearly 70 years, retiring in 1974 as superintendent at Paradise Valley (Ariz.) CC. Following service in World War I, he went to work on the grounds crew at Westmoreland Club in the Pittsburgh area. He became greenkeeper at nearby Alcoma Country Club in 1927. During World War II he was superintendent at both Alcoma and The Longue Vue Club.

In the early 1950s he moved to Arizona, working as superintendent as well as performing some redesign work. He built White Mountain Country Club at Pine Top in eastern Arizona in 1955. Later, with son Arthur Jack, he co-designed the second nine holes at White Mountain.

An excellent golfer, Mr. Snyder played nine holes twice a week until he reached the age of 96. When asked what he wanted for his 95th birthday, he answered: “I could use a new golf bag.”

NOT QUITE READY FOR IPM

To the Editor:

My father, Gordon Witteveen, has asked me to send you this photo. I hope you find it interesting. Perhaps your readers will, too... I guess I’ll always be a greenkeeper’s daughter.

In Zimbabwe I marveled at city workers cutting grass with dull scythes on the boulevards near Victoria Falls (Dad was less impressed when he contracted tic bite fever attempting the same feat on my Swaziland “lawn”).

In Bangkok I asked a friend to translate signs written in Thai script in the enclaves of the Grand Palace enthralling visitor not to disturb the grass.

In Vienna, at another famous palace, a uniformed grass guard patrols the grounds on bicycle, lest an errant tourist can’t resist a short barefoot stroll on the cool, green, manicured lawns. I watched him catch an infractor once, whistle shrilling, bell tinkling, one arm flailing as he peddled furiously up and down the gravel pathways.

But the above photo was taken in India, just outside the Taj Mahal, inside an enclave that keeps out the postcard hawkers, beggars, holy cows, fruit sellers, and all that is chaotic and fascinating about the subcontinent. On the other side of the red sandstone wall is the Taj itself, the white marble shrine built for love by a heartbroken emperor in 1631 (completed in 1653).

Ed. — The author’s father is superintendent at Board of Trade Golf Club in Toronto.

The industry’s most powerful and user-friendly remote pump station monitoring software is better than ever.

PumpLog™ for Windows™

Designed to take full advantage of the Windows interface, PumpLog lets you point-and-click your way through your next virtual-visit to the pump house. Pull-down menus and colorful, animated graphics create an easy to use (and understandable) interface environment while providing direct access to the pump station through PumpLog’s powerful monitoring, recording and playback utilities. PumpLog’s on-line graphical interface gives station operators real time access to critical pump station data via direct line or modem and works with both conventional and variable speed stations.

PumpLog:

- Lets you monitor real time or historical data from your pump station remotely from your PC anywhere, anytime.
- Permits remote station diagnostics and calibration by the operator or FLOWTRONEX PSI Product Support personnel directly.
- Records station data and provides intuitive methods of display for data analysis.
- Pull-down menus and colorful, animated graphics create an easy to use (and understandable) interface environment.
- Designed to take full advantage of the Windows interface.
