PAR FOR THE COURSE IN 4TH SEASON

"Par for the Course," the Golf Course Superintendents Association of America's 30-minute television show, moves this year to the Golf Channel. The production's fourth season will begin March 22, at 6:30 p.m., EST. Each week, "Par for the Course" will take viewers inside the world of golf by featuring how-to-play tips from Golf Digest school instructors, interviews with industry leaders and celebrities, site visits to top golf venues throughout the world, agronomic insights and environmental success stories.

N.Y. ASSOCIATION HELPS STUDENTS

ROCHESTER, N.Y. — The New York State Turfgrass Association (NYSTA) has awarded scholarships to Kristian Granger, Nancy Miller and Maurice Hopkins of SUNY Delhi, Eric Smith and Jonah MacDonald of SUNY Cobleskill, and Michael Friedman of Cornell University. The Fitzharris Agency sponsored a scholarship that was awarded to Betty Jean Kelly of Finger Lakes Community College.

MID-AM ATTRACTS MORE THAN 8,000

CHICAGO — In spite of sub-zero wind chills and drifting snow, 8,724 visitors attended the Mid-America Horticultural Trade Show, Jan. 16-18, at the Navy Pier, the highest recorded for any Mid-Am show except 1996. Mid-Am '97 boasted more exhibitors than any other show in Mid-Am history, with a total of 517 companies contracted to exhibit in 940 booths. Mid-Am's Career Center introduced hundreds of area horticulture students to 96 employers.

NEW YORK BEGINS REPORTING LAW

ALBANY, N.Y. — The New York State Department of Environmental Conservation (DEC) is taking steps to implement the state's new Pesticide Reporting Law, according to Acting Commissioner John P. Cahill. The law became effective Jan. 1, requiring all commercial pesticide applicators and retailers to report all sales and locations of applications, by zip code. The DEC is charged with developing a computer database of all pesticide applications to help health researchers concerned with identifying possible causes of illnesses. Cornell's University is charged with helping set up the database.

MISSION HILLS LPGA TOUR'S TOP MAINTAINED

PALM SPRINGS, Calif. — The LPGA's first major of 1997, the Nabisco Dinah Shore Championship, will be contested later this month here at the Mission Hills Country Club. In an agronomic sense, it's all downhill from there.

Following an exclusive poll of LPGA Tour players, conducted by Golf Course News, Mission Hills was again named the Best Conditioned Course on the circuit for 1996.

Mission Hills was similarly singled out for excellence in 1993.

David Johnson is director of maintenance for all three Mission Hills layouts. He accepted the award during February's Golf Course Superintendents Association of America conference and show in Las Vegas.

Variations in success reported in bentgrass conversion methods

BY PATRICK O'BRIEN

As more golf courses convert their greens to the new heat-tolerant bentgrass varieties, superintendents are using a number of methods to get the job done. In some cases, it is easy, reliable, and only takes a few months, while in others the process is slow and the results are uncertain. Conversion costs are variable as well.

The most popular methods of conversion that the U.S. Golf Association (USGA) Green Section staff has been recently reconruction, surface rgrassing, interseeding, and Ber-

Patrick O'Brien is director of the Southeast Region for the U.S. Golf Association Green Section.

VERSATILE VERTI-DRAIN

Redexim promises increased speed and aeration capacity without sacrificing quality in two new machines — Verti-Drain 7212 and 7316. Both models increase capacity up to 70 percent. The primary difference is that the 7316 has a greater working width and depth. Both are capable of coring and solid tining, as well as using the company's new needle tines which create less surface disruption. For other new products, see pages 65-66.

Dr. Yelverton issues superintendent's a spring wake-up call

Spring is here in some areas and many superintendents are scheduling their pre-emergence herbicide applications. Much has been written about different products, application timing, and length of control. Recently, U.S. Golf Association Green Section agronomists spoke with weed science expert Dr. Fred Yelverton of North Carolina State University on this subject.

USGA: When do you recommend applying granular spring pre-emergence herbicides?

Fred Yelverton: All PRE crabgrass/goosegrass materials should be applied prior to any expected germination. Crabgrass will germinate when soil temperatures in the upper 1/2- inch of soil average about 52-55 degrees over about a three- to five-day period. An average soil temperature is the key because if you have bright sunny days in February when the air temp is in the 60s or 70s, you can easily have soil temperatures in the upper half-inch in excess of 55 degrees in the middle of the day. However, this early in the year it will usually drop down at night.

So the average soil temps over a several-day period is what you look for. Again, maximum control can only be obtained when PRE herbicides are put out and watered in before germination. If I were monitoring soil temperatures, I would start applying when soil temps average about 49-50 degrees. For a majority of courses in the Southern region, this is going to be
