WASHINGTON, D.C. — Rohm and Haas Co., the Philadelphia-based specialty chemicals manufacturer, has received Environmental Protection Agency registration allowing application of the firm's new Eagle fungicide to turf. A systemic product designed for use as a protectant fungicide while providing post-infection activity, Eagle is formulated to offer a wide spectrum of disease control coupled with excellent safety to all types of turfgrasses. Recommendations call for applications of Eagle to be made in a regularly scheduled spray program at a rate of 3 ounces per 5,000 square feet every 14 days.

The board consists of two members each from Rohm and Haas and American Cyanamid. Current board members include Janet Gieselman, turf & ornamentals products manager at Rohm and Haas and chair of the RohMid board; Don Loughner, president of American Cyanamid; and Curl, who joined the company as senior market manager, Professional Turf, Ornamental and Pest Control Products.

Some Of The Greatest Holes In Golf Are Never Seen

Most golfers don't know they exist, but great aeration holes make great greens!

Superintendents know the importance of aeration holes, because both the procedure and choice of amendment can be critical to the long-term health and durability of the green. While sand and some manufactured amendments can actually break down over time (adding to compaction problems!), GREENSCHOICE provides for a permanently amended root zone, unaffected by physical or chemical forces. GREENSCHOICE is a chemically inert mineral composition, kiln-fired to provide both high porosity and exceptional hardness. Amending with this advanced product results in a dramatic improvement in water and nutrient retention, reduced compaction and significantly increased percolation.

Proven successful in conditions ranging from compacted soils to droughty sands, only GREENSCHOICE can provide a full range of benefits to problem greens:

- Fights compaction, providing a naturally aerified root environment where moisture, nutrients and oxygen are readily available to the roots
- Offers percolation rates to 1 1/2"/hour, ensuring both effective drainage in periods of heavy rainfall and thorough flushing out of the root zone
- Retains up to 83% of its weight in water, providing for superior moisture and nutrient retention...a significant benefit to greens plagued by dry conditions
- Draws moisture and nutrients back into the root zone via a strong capillary rise rate of 30 cm/24 hours
- Promotes vigorous root development by making both oxygen and moisture available deeper into the root zone
- Provides a permanent solution, unaffected by heavy traffic or the application of acidic or caustic fertilizers
- Provides up to 28 days of control.

GREENSCHOICE The First Amendment
