Oneida Nation promises to employ effluent at $10M golf center in New York

ONEIDA, N.Y. — The Oneida Indian Nation has pledged to use recycled water from the city's treatment plant to irrigate its future $10 million golf center.

According to an agreement set to be finalized between the city and Indian community, the Nation will lay a pipeline spanning 3.5 miles from the golf facility to the treatment plant. The pipeline will intercept effluent that would otherwise flow into Oneida Creek.

The intercepted effluent will be discharged into a reservoir near the golf courses. The irrigation system will have temperature controls and weather systems that automatically extract water to certain parts of the course. The system is modeled after similar systems used at Walt Disney World courses.

City and state environmental officials here are pleased that it will reduce the amount of material discharged into Oneida Creek. Lake Placid and Canton are the only other communities in New York state that use effluent water.

The Oneida Indian Nation's golf center, which is scheduled to open in 1998, will feature an 18-hole par 3 course, a golf academy, a full-size driving range, a short-game center and a 40,000-square-foot putting area. Construction started earlier this spring.

Ever since its introduction, BAYLETON™ Turf and Ornamental Fungicide has been one of the most popular products of its kind.

And no wonder. Its systemic action is not only effective, it keeps the control you need from being washed away or mowed off. So you can apply BAYLETON whenever — and wherever — you want.

And now, that famous BAYLETON control is available in a convenient new package. The drum. It not only keeps BAYLETON fresh and dry; it enables you to use exactly how much you need.

That's especially important when you tank mix BAYLETON for even broader control. Its ability to be used in combination with other products is one of the most outstanding features of BAYLETON, and now, that's even easier to do.
