Survey: Permitting more involved, say architects

Responding architects agreed that the permitting process is generally longer, according to a survey of golf course architects in the United States. A full 92.5 percent of those responding said environmental planning is being done before permits are sought.

Sixty-two percent of the respondents said obtaining financing is found more easily today than in the past. Brian Curley, in fact, responded: "Absolutely!" But 32 percent of the respondents disagreed, saying it is not easier to obtain, and 2 percent felt the situation is unchanged.

Sam Sakocius, president of golf course builder Sajo Construction, said, "It seems there are more sources for financing but those sources are more restrictive."

A full 92.5 percent of those responding said environmental planning is being done before the permitting process begins. But despite this advance work, 64 percent reported that it is taking developers longer to get projects approved. Only 13 percent said permitting is being completed more quickly than in the past.

Roger Rulewich of the Golf Group in Bernardston, Mass., who has courses under construction or in planning in six states, balanced the two opinions, saying the permitting process is "shorter but with more litigation."

Gary Linn of Robert Trent Jones II International in Palo Alto, Calif., credited reports and studies that are mandated by regulations with lengthening the process.

John Sanford of Jupiter, Fla., spoke for some who said the answer to the question depends entirely on the site and state.

New take on the golf/real estate combo

By MARK LESLIE

CHARLOTTE, N.C. — Mixing two everyday ideas, a pitch-and-putt golf course and multi-family apartment community, a small golf course operator here feels he has a prize possession — one that should "go national."

"I'm excited about the potential it has for the golf business," said Del Ratcliffe of his concept. "If we have a number of these all over the country, we'll attract a lot of people who have never picked up a club to play on them. It's simple, inexpensive and a great way to learn the game."

Ratcliffe Golf Services opened its Paradise Valley Par-3 here in November in conjunction with a 300-unit apartment complex built by Summit Properties, a local developer.

The has already proven extremely successful, said Ratcliffe, who also operates the 18-hole Sunset Hills and a practice range in the area. "We certainly feel it can be done on a very profitable basis."

Call it "a poor man's country club," he said.

While Paradise Valley and the Summit Green apartment community are under separate ownership, Ratcliffe said: "The ideal situation is to have a fully integrated project, with a single owner, where the par-3 becomes a simple amenity to the project. We want to fully integrate the concept to go to the semi-private golf community where you gain golf privileges when you become a tenant in the apartments."

"The concept is so good," he said, that it should be incorporated in developments around the country. "The golf course benefits from having a lot of people next door to it. The apartments can charge a higher rental and have a much more marketable product than the guy down the street. Most apartment complexes are updated with the better stoves or refrigerators — bells and whistles in the apartment. But the [competition] down the street can't refurbish..."
Clearly, the EPA’s actions create great barriers to true innovation. I am very disappointed.”

“ECOS hoped that through the principles and process described in the draft agreement that EPA and the states could create a shared commitment to working in partnership with each other and being accountable for our actions,” said Larson. “We are instead left with damaged trust and questions about EPA’s commitment to environmental regulations.”

Architects survey

Continued from previous page

Meanwhile, surveyed about whether the pipeline of new courses shows any signs of drying up, golf course builders agreed that it does not.

“All indications,” explained Joe Niebur of Niebur Golf, based in Colorado Springs, Colo., “show 1997’s construction activity remaining constant with the past year’s.”

Bill Kubly, president of Landscapes Unlimited Inc. in Lincoln, Neb., seconded that motion, saying, “If anything, the pace is picking up. We have never seen so much activity. There seems to be a lot of renovation work coming up as well.”

MACRO-SORB®

Amino Acid Fertilization

More Uniform and Lasting Growth. Maximum Protection from Stress.

Amino acids, the building blocks of all protein matter, are natural molecules that take part in all of a plant’s physiological processes. The action of amino acids stimulates the natural processes that control the photosynthetic activity and water and nutrient use efficiency of the plant.

By providing the same natural L-form amino acids a plant normally produces, Macro-Sorb® greatly reduces the energy required for their production and translocation. The energy saved can then be used for other vital processes resulting in a healthy and efficient plant that is more able to withstand the rigors of stress.

Macro-Sorb® is a unique formulation of select L amino acids designed to enhance your existing programs. It is tank-mix compatible with soluble fertilizers, pesticides, fungicides and plant growth regulators. Applied together, Macro-Sorb® will improve the efficiency of these treatments by increasing their absorption and translocation within the plant. And its ISO 9001 certified so you can be assured of batch to batch consistency.

Best of all, Macro-Sorb® is economical to use and it protects the environment.

Macro-Sorb® — a true systemic. It’s new... it’s unique... and nothing else works quite like it!

For more information about Macro-Sorb call Nutramax Laboratories at: 800-925-5187
