Yamaha jumps into Tour sponsorship spotlight

BY HAL PHILLIPS

MYRTLE BEACH, S.C. — Some times it's easy to spot a trend in the making. Witness the increasing number of golf industry firms which have secured national television exposure by sponsoring PGA and Senior tour events.

The latest is Yamaha Golf Cars, which has agreed to become the "sponsored by" sponsor of the Energizer Senior Tour Championship. Energizer batteries will retain its title sponsorship.

The move follows last month's announcement that John Deere would assume title sponsorship of the PGA Tour's Quad City Classic, heretofore known as the John Deere Classic. For the past three years, The Scotts Company has served in various sponsorship capacities with the Senior Tour's Tradition tourney.

While similar, Yamaha's decision sets it apart from Deere and Scotts, both of which have allied consumer divisions that will certainly profit from national television exposure. On the surface, the Senior Tour Championship would appear to offer fewer synergies between Yamaha Golf Car Division and its parent company, Yamaha Motor Manufacturing Corp. of America.

The season-ending Senior Tour Championship, sponsored in part by Energizer batteries and Myrtle Beach Golf Holidays, features the top 31 Senior PGA Tour players and the top 16 MasterCard Champions (formerly the Super Seniors), many of whom use golf cars during competitive

Lesco manufacturing moving to Ohio site

STREETSBORO, Ohio — Lesco, Inc. has announced that it will relocate its equipment manufacturing operations from Sebring, Fla., to a new, 177,000-square-foot facility here. The plant will be operated by Commercial Turf Products, Ltd., the company's new joint venture with MTD Products Inc.

The new plant, purchased from Aquatech, Inc., will be available for occupancy in late Spring 1997. Production is scheduled to begin in mid-summer and it is anticipated Commercial Turf Products will employ up to 225 people within the next two years. Lesco has announced plans to close the Sebring manufacturing plant in October 1997.

The proximity of the Streetsboro site to several existing MTD facilities will enable the joint venture to minimize start-up expenses and to utilize manufacturing resources already in place. "We are excited about this development because it will enable us to begin manufacturing operations al-

most a full year earlier than originally planned," said William A. Foley, Lesco's chairman, president and chief executive officer.

In October 1996," said Ware H. Grove, vice president and chief financial officer. "Lesco announced an estimated fourth quarter charge of $6 million in connection with formation of the joint venture and the repositioning of our equipment business.

Lesco also completed a significant rationalization of its entire product line during 1996. As a result of one-time charges that will result in a net loss for the year ended December 31, this step strengthens our balance sheet and positions Lesco very solidly for future growth."

Lesco has also announced that sales revenues for the year ended Dec. 31 reached a record $312 million, 29.1 percent higher than 1995. Changes in accounting estimates and other non-recurring charges taken in the fourth quarter resulted in a net loss of $2.3 million for 1996, compared with net income of $4.8 million for 1995. Earnings per share reflected a loss of 29 cents for 1996, compared with income of 59 cents per share in 1995.

Toro merger

announced its acquisition of OSMAC, a central irrigation control system for the large turf irrigation market, from Motorola, Inc.

Toro has acquired the exclusive marketing rights to the OSMAC control system, the OSMAC trademark, the OSMAC 4.0 software and a license to the proprietary communications protocol that drives field hardware. Motorola will continue to manufacture and supply Toro with components for OSMAC.

Motorola has manufactured OSMAC products and Toro has marketed them for more than five years. During that time, OSMAC has been installed on nearly 1,000 systems worldwide.

"We are very excited that we were able to reach this mutually-beneficial agreement with Motorola," said David McIntosh, office of the president, The Toro Co. "Toro is committed to providing solutions for today's turf managers, and OSMAC is an integral part of our product mix that helps us accomplish this goal."

Toro's 1st quarter

$209 million compared to $211.5 million last year. The company also said integration of the newly acquired James Hardie Irrigation Group was on schedule.

Commercial equipment sales were flat for the quarter, reflecting continued field inventory management. Sales of equipment to commercial customers and landscape contractors were also lower than last year.

Sales of irrigation products increased 55.1 percent due primarily to the addition of Hardie Irrigation. Toro's core irrigation product sales were down for the quarter as a result of wet weather conditions and field inventory adjustments.

Toro international sales continued to be strong with a 37.1 percent increase due in part to the addition of Hardie international sales. Toro's core international business also increased led by sales of commercial equipment products to golf courses, particularly in the Pacific Rim and sales of consumer products to Canada and Australia.

REWARD® Edges Out Grass
and Broadleaf Weeds Fast.

REWARD Landscape & Aquatic Herbicide gives you the winning edge you need in your grounds maintenance weed management program. A non-selective, highly active contact material, REWARD is designed to help you manage tough weed problems on your golf course. REWARD provides quick, effective control against both grass and broadleaf weeds. Once it's applied, you'll see results on weeds in as little as one day. At last, you get the kind of fast control that other herbicides—like Roundup—can't even begin to deliver.

REWARD is also the one herbicide you can use with confidence on trimming and edging anywhere on your course. Since it binds quickly to the soil, REWARD doesn't leave biologically active soil residue, making it ideal for edging around trees, shrubs, flower beds and other ornamental plantings. Or apply it along cart paths, around sprinkler heads or other areas where translocating herbicides, such as Roundup, just aren't desirable.
