Audubon Int’l streamlines campaign, goes primetime

Elkington takes reins as global spokesman... ...while Sanctuary certification made smoother

By MARK LESLIE

SELKIRK, N.Y. — Featuring PGA Tour star Steve Elkington as its international spokesman, Audubon International is launching the Audubon International Golf & the Environment Campaign in October in an effort to educate golfers globally "to be stewards of the game, stewards of the rules and stewards of the environment.

"The awareness will get golfers to think about the history and heritage of the game, its link with nature, that it’s a walk with wildlife — the whole gamut," said AI President Ron Dodson. "It will also make them aware not only of the rules of golf but of the environmental rules, the stewardship responsibilities like not littering, fixing divots, repairing ball marks and remembering that they are playing on living plants."

Pointing out that golfers are mostly interested in playing golf, Dodson said from his headquarters here: "You need to have a

International Turf Society shrinks world of research

By MARK LESLIE

SYDNEY, Australia — The International Turfgrass Society (ITS) attracted scientists here from around the world in July, exchanging findings on research ranging from physical turf attributes to breeding and genetics, to environmental issues.

Meeting once every four years, the ITS "gets the whole research community in sync," said Dr. Rich Hurley, director of research for Lofts Seed Co. "You get to know people around the world and what they're doing. Otherwise, a person could be working on the same thing and you wouldn't know about it."

The ITS, he said, also promotes collaboration. "You can become a friend and working associate with someone on the

See research stories, page 20

other side of the world through the society," Hurley said. "People get to know each other and communicate via fax, e-mail and telephone. The conference is a catalyst to cooperation.

"It also gets people focused on the different climates and worldly problems. I think it makes research more efficient because it makes everybody aware of what's happening in the world."

A case in point, he said, is the international acceptance of new bentgrasses developed in America.

"There’s a great interest in them around the world," he said. "They are being used

in Australia, Japan and Europe. That's a big step up. They are hopping on the bandwagon, and I think a lot of it is this global community we have. It’s so easy to spread information around.

"Superintendents in foreign countries receive the major magazines. They know instantly what's happening here in the States, so when a new grass comes on the market they're on them."

Dr. Pam Charbonneau of the University of Guelph is the new president of the ITS and will oversee host duties for the next session in 2001.

In the meantime, Immediate Past Secretary Dr. Jack Hall of Virginia Tech is coordinating publication of the 1997 meeting papers.

Flagstone edging a winner

By MARK LESLIE

DALLAS — When greens and grounds superintendent Mark Price departed The Northwood Club here this spring, he left successor Scott Ebers a present: good-looking edges to cart paths that once were torn by golf carts and maintenance vehicles.

Facing dead grass on the edges of the paths in a number of spots, Price installed pieces of flagstone of varying shapes and sizes to the edge of the paths.

The results, Ebers said, are excellent, and "eliminated the wear problem while keeping the paths aesthetically pleasing."

The flagstone was installed in two ways, both of which worked well:

• The soil was stripped and the flagstones installed in place, dry; and

• Concrete was poured between all the pieces of flagstone to hold them firmly in place.

Flagstone of varying shapes and sizes can help eliminate the wear problem on cart path edges.
