A First Tee 'first' looms

By Mark Leslie
RICHMOND, Va. — Neighboring Chesterfield County is "fast-tracking" the Richmond First Tee Foundation (RFTF) proposal through an approval process that could lead to earthmoving in May and put it on target to be the nation's initial project built from the ground up as a First Tee facility.

"We are thrilled with the county's support," said Fred Tattersall, a financial adviser and the moving force behind RFTF. "They have put us on a fast-track process that could lead to earthmoving in May and put it on target to be the nation's initial project built from the ground up as a First Tee facility."

"We are thrilled with the county's support," said Fred Tattersall, a financial adviser and the moving force behind RFTF. "They have put us on a fast-track process that could lead to earthmoving in May and put it on target to be the nation's initial project built from the ground up as a First Tee facility."

Employees come first at Gotham

By Peter Blais
Building a course operations firm that is both financially successful and provides a first-rate quality of life for its owners and managers are the dual goals of Gotham Golf Partners, according to company President R. Danny Mays.

"Family and quality of life are very important to all my managers," said Mays, who along with many of GGP's upper-level executives are former employees of KSL Fairways, a Virginia-based multi-course operator.

"In the golf business, it's always been a given that you work seven days a week. But to properly manage entities you have to put people in place who can perform and do their jobs. We have sophisticated management so that there is time for other things in our lives.

"We push our managers to make sure they get their days off. If a manager can't take his days off then he..."

Mower manufacturers see 'ease' to please

By John Farrell
Hoping to make life a little easier for golf course operators, major mower manufacturers are addressing real-life concerns — everything from ease of operation and maintenance to noise pollution — as they bring the next wave of products to market.

In what is part of the largest new product roll-out in the company's history, Jacobsen is introducing its new HR-9016 Turbo (TM) Wide-Area Rotary Mower. First unveiled at the GCSAA show in Anaheim, the HR-9016 is a 16-foot-wide rotary mower with a 90-hp turbo-charged diesel engine and 4-wheel drive.

"One of our goals in designing the HR-
Mowers
Continued from page 1

9016 Turbo was to make routine maintenance and service as easy as possible," said Bill Potter, Jacobsen product manager.

In meeting that goal, the mower is constructed with no pulleys, idlers or belts, and uses all-hydraulic drive to the three cutting decks to assure efficient, reliable operation requiring less-frequent service.

Potter added that the product meets the need for peak mowing productivity at golf courses, parks, municipal grounds and sports fields. Originally designed to meet the needs of European sports fields and golf courses requiring a high-precision, multi-purpose mowing machine, Toro's Grounds Pro (TM) 2000 is expected to fit nicely into U.S. markets as well.

Featuring easy-to-reach controls and rear steering to ensure maximum maneuverability, the Grounds Pro utilizes reel cutting units to provide superior quality of cut. Available with either a five-blade fixed-head or an eight-blade floating head, the cutting units raise hydraulically to accommodate tight spaces and narrow gates.

In addition, the Grounds Pro Quick Link (TM) A-frame attachment system allows for a wide variety of attachments, converting the machine from a precision reel mower to a rotary broom, dump cart, fertilizer spreader, sprayer, debris blower, or snow plow.

"We've touted it as a total grounds maintenance system for across all sorts of turf to maintain," said Jody Walsh, public relations spokesperson at Toro. "If you're a golf course that really needs this kind of a utility vehicle, it's a nice fit."

Moving in a different direction, Ransomes has delivered the industry's first electric triplex greens mower, the E-Plex II.

According to Peter Whurr, director of marketing at Ransomes, the company has taken the first-generation E-Plex machine and enhanced it per users' requests, with refinements such as an improved green speed. Now, for instance, regardless of whether it's going uphill or downhill, the mower maintains the same speed, producing a uniform clip rate.

The company also reports having improved operational characteristics of the product, such as making it easier to steer and placing the whole tractor on a true 48-volt system, so the battery maintains full discharge across all cells.

Of course, because it's battery-powered, it's also environmentally friendly. No pollution into the atmosphere, no noise, and none of the issues normally associated with greens triplex mowing, like hydraulic oil leaks or extensive engine maintenance.

"And because there's no noise coming from it, if you're in a noise-sensitive area, you can still get out early in the morning to cut greens without disturbance to any residents in the area," said Whurr. "Now, if you're able to do that, the course can open earlier and you can get more rounds of golf into the course earlier on."

John Deere's 2500 Triplex Greens Mower was also introduced in February. Primarily intended to mow golf course greens, the machine also mows tees, approaches, and some small fairways.

"What we've tried to do is design the machine around the operator so it's as easy as possible to operate," stated Nolan Meggers, John Deere product manager.

"This way, they can make nice straight lines on the green, and it does a very effective job of giving a good, quality cut."

Meggers added that the company also tried to keep serviceability at the forefront of the design so that whether a technician is performing routine maintenance or simply performing a daily check, "it's very easy to do."

PREVENT GRUBS.
STOP THEM IN THEIR TRACKS.
OR MAKE SURE IT'S NOT EVEN AN ISSUE.

Now you can control grubs preventatively or curatively. With a single application. Only with new MACH 2™ Turf Insecticide.

MACH 2 is a powerful killer with a new chemistry that accelerates the molting process of target insects.

Just hours after ingesting MACH 2™, the insect stops feeding. Then it dies beneath the surface in 2 to 3 weeks. It's that simple.

With MACH 2™ Turf Insecticide, you'll kill target enemy insects all season long. Grubs. Cutworms. Armyworms. Sod webworms. Plus, odorless MACH 2™ is easy to apply. You don't even have to water it in immediately.

So don't let grubs control your grounds, or your schedule. Depend on MACH 2™ Turf Insecticide. It's all you need to prevent or cure.
