As a golf course professional, it's your responsibility to make the right choices. Right for the turf, and for the people who enjoy it. One way to meet that responsibility is with Dimension® turf herbicide.

Dimension provides season-long control of crabgrass and over 20 other tough grasses and weeds, with excellent safety on established turf. And Dimension does it without staining, or harming adjacent ornamentals. That means no more weed “fringes,” because you can apply Dimension with confidence right up to the turf’s edge, even around walks, drives, and landscaping.

Dimension's low use rates and favorable environmental profile mean less worry. The active ingredient features very low toxicity to mammals, birds, and insects. Plus it bonds to soil particles instead of leaching into groundwater.

Dimension offers the widest application window—6 weeks more than other preemergence products. That lets you delay application for optimum control of goosegrass and other weeds. And split applications can stretch control even further for areas with long growing seasons. It all adds up to a turf herbicide that only weeds find hard to live with.

Panel on disabled scheduled for GCSAA Conference and Show

By Bob Spiwak

The Golf Course Superintendents Association of America (GCSAA) has scheduled a round table discussion entitled "The Americans with Disabilities Act (ADA) and Golf," for its February convocation in Anaheim, Calif. Set for 2:5 p.m. on Friday, Feb. 6, the panel will include Greg Jones, president of The Association of Disabled American Golfers; Jerry Coldiron, superintendent at Lassing Pointe Golf Course in Kentucky; and Peggy Greenwell of the U.S. Department of Justice.

According to Cynthia Kelly Smith, government relations counsel for GCSAA, several other participants have been invited. Smith said that she gets a call each week from a superintendent somewhere about the ADA. The GCSAA convention program notes, "This government relations program will feature a panel of experts discussing the ADA and its impact on golf...compliance issues, advice on handling complaints and the status of the government's draft golf access guidelines are a few of the topics that will be covered in this interactive, topical session."

Smith noted that the ADA involves not only superintendents, but architects, the rules of golf, and the way golf is played. "More superintendents need to be aware (of ADA ramifications) and they need answers," he said. "We hope to work with the disabled community and we all agree [the forum] will be a good way."

Biologicals and biorationals are emerging

chloronicofuryls imidacloprid, is very effective as a broad-spectrum, long-residual insecticide. • The halofenozide Mach 2, a molt-accelerating compound, gives excellent control of white grubs, billbugs and beetles.

The synergy between the Cruiser nematode and Merit (used at 1/16th the recommended rate) provides 100-percent control of Japanese beetle grubs, Grewal said.

Grewal warned that fipronal had an adverse effect on the natural population of nematodes.

The OSU professor said more work needs to be done in a number of areas, especially on fungi and bacteria biologicals as well as to develop products to control white grubs.

"We need to try to understand the naturally occurring biocontrols that are already there and easy to establish...They save water, the environment, money and much more," Grewal said.

Rieke: Are your roots in sand?

a micronutrient package.

He suggested that superintendents look at soil-ratio tests. Calcium (Ca) should have a 60- to 80-percent saturation in soil test reports, magnesium (Mg) 8 to 12 percent and potassium (K) 5 to 8 percent.

The ratios, Rieke said, should be less than 6:5:1 for Ca:Mg; less than 13:1 for Ca:K; and less than 2:1 for Mg:K.

"Are we overfertilizing?" Rieke asked. "Maybe we are.

He said granular fertilizer should be applied to sand greens in the spring and fall, including some slow-release material; and the turf should be spoon-fed during prime playing season, using mostly soluble fertilizer with sprays through the irrigation system.

Finally, he said superintendents should "do all you can to get oxygen into the soil," adding that is an important factor that has been overlooked.

Dollar Spot Knockdown Standard 26019 vs. 26GT

For years, you’ve relied on CHIPCO®26019 brand fungicide to deliver the best brown patch and dollar spot control available.

But, sometimes, when soaring summer temperatures made you feel the heat, you’ve turned to contact materials to give you the quick disease knockdown you need. Now, you can get the same powerful, long-lasting disease control you’ve come to expect from CHIPCO®26019, plus the quick knockdown you demand. Introducing new CHIPCO®26GT: University trials prove that new CHIPCO® 26GT provides consistently quicker knockdown of dollar spot and brown...
