Iowa golf/ag alliance influencing policy

By MARK LESLIE

DES MOINES, Iowa - Combining monetary clout with "a huge grassroots force," the Iowa Alliance of Environmental Concerns (IaAEC) and Agribusiness Association of Iowa (AAI) are proving that the turfgrass and agriculture industries can be a political power at the Statehouse here.

In this hot bed of agriculture, legislators have been known to cry "Uncle" when bargained by calls from IaAEC and AAI members, who hail from the moneyed agribusiness as well as the Iowa Golf Course Superintendents, Professional Lawn Care and Sod Producers associations and various other turf managers.

Efforts in various states around the country to affect legislation through lobbyists have been few and generally ineffective. Asked if the IaAEC-AAI effort could serve as a model for other turfgrass and agriculture industries, "I think you have to look at it on a state-by-state basis. We're in a hot bed of agriculture here."

In Iowa's case, he said, "We needed a vehicle to pull together everybody who had the same concerns: to ensure we continued on page 14

N.C. State prof starts studies to help Asians

By MARK LESLIE

RALEIGH, N.C. — Citing the absence of scientific information on turfgrass pests in Asia, an American professor has undertaken what he hopes will be the first of many studies to help turfgrass superintendents in that region.

"If we can show some success with this research, on future projects I hope there will be people standing in line saying they will help," said Dr. Rick Brandenburg, a turf entomologist at North Carolina State University here.

"The time commitment is actually very small.

The research is needed for many pests because what is known in the United States cannot always be extrapolated for use in Asia, according to Brandenburg, who discovered this fact on a trip to Singapore this spring.

His pioneering program targets the number-one pest in many Asian countries: the mole cricket. Some 25 superintendents in Hong Kong, the Philippines, Singapore, Malaysia, China and Indonesia are sending mole crickets from their courses to Brandenburg.

Two GCSAA ex-presidents team in jobs search firm

By MARK LESLIE

LOS ANGELES — Golf Course Superintendents Association of America (GCSAA) Past President Bruce Williams has joined another former president, Jerry Faubel, adding a West Coast presence to Faubel's Executive Golf Search Inc.

Faubel first formed the "headhunting" company with famed course architect Robert Trent Jones Sr. and Michigan State University Prof. Ken Payne in the early 1990s. Payne died in 1994 and Jones has retired, leaving Faubel running the company solo.

"Over the years, I've been involved in helping a number of superintendents find jobs that would be a good fit for them," Williams said. "Retiring from the GCSAA board allowed me the opportunity to spend my spare time in other activities."

Making choices: It's an environmental watershed

By RON DODSON

Have you ever heard the reference to "watershed" as a critical point that changes a particular course of action, like a decision that created a turning point in history? That use of watershed comes from its definition: "a ridge of high land dividing two areas that are drained by different river systems, also called 'water parting.'" A watershed may also refer to the region that drains into a river, river system, or other body of water.

First, the industry needs to understand the environmental importance of watersheds in order to make good economic and environmental decisions about developing and managing the land.

Secondly, it has reached a critical point in making land-management decisions where it must choose between the status quo of golf course development and maintenance, and that of sustainable development and management practices.

In order to understand how important watersheds are, however, we need to know a little about ecology. An ecosystem is a community (of plants, or animals, or even human beings) together with its environment of soils, waters, and other elements on which the organisms depend for survival.

can keep using pesticides and fertilizers in the manner that law allows. Tying together the turf industry is one of our biggest accomplishments.

In the halls of the Legislature those accomplishments take on human proportions, affecting the everyday work life of IaAEC and AAI members. In the just-completed session, for instance:

- Opposed by the alliance, the oil filter bill died. It would have required all oil filters in Iowa to be recycled.
- Supported by the alliance, the Environmental Audit and Immunity Bill was passed. The bill encourages business owners to voluntarily conduct audits and submit their findings to the Department of Natural Resources. "In exchange, they get privilege and immunity," Bond said. "If they have a problem, they have to develop a plan to take care of it. It's important to us as business owners that we do this voluntarily rather than it be regulated.

- Supported by the alliance, a drug-testing law passed. It allows private-sector employers to perform unannounced drug tests for all employees.

"We felt it was important, particularly if the employee is in a safety-sensitive position," Bond said.

The one bill the alliance lost on, she said, would have allowed an arbitration process when a seed farmer grows and sells a seed whose intellectual property rights are owned by a seed company.

From rallies at the Statehouse rotunda to phone calls to individual lawmakers, legislative dinners and Bond's one-on-one lobbying, the alliance is deeply involved in the Statehouse operations from its opening, the second week in January, to its closing, May 23. And Bond mails out bi-weekly updates to members, this year tracking 60 bills.

"We aren't anti-everything," said Watters. "We are concerned about the environment as much as anybody else. We just want to make sure both sides are heard.

"We feel strongly that we can address the issues from a scientific standpoint. They [opponents] throw around figures that are not fact. We are basing what we say and do on fact."

"Not all regulations are bad," said Bond. "Most are designed for protection of the public and the workers who use the product. Our goal is to make sure they don't go overboard.

She gave, as an example, a bill once submitted that would have mandated that all lawn-spray posters be printed in Spanish and English. The bill sponsor's district included a packing plant employing a number of Hispanics, but Hispanics and other aliens account for less than 2 percent of Iowa's population.

"We have universal signs that warn 'No Pets,' or 'No People.' It was a business cost that went beyond the needs of the public," Bond said. "Of course, that wouldn't be the case if we were in California because of the diversity of the population there."

Started in 1990 out of the continuing battle over "home rule" pre-emption in environmental regulations, IaAEC has gained a strong foothold in the corridors of the state capitol,
Iowa Alliance of Environmental Concerns urges, ‘Avoid our mistakes’

By MARK LESLIE

DES MOINES, Iowa — Agriculture and turfgrass industries in other states, perhaps less potent than here, could learn from Iowa’s mistakes as well as its success, said Mona Bond, executive secretary of the Iowa Alliance of Environmental Concerns (IaAEC).

IaAEC gained a crucial boost to its momentum last fall when the Iowa golf course superintendents’ and lawn-care professionals’ associations both voted to donate a portion of each member’s dues to the alliance. This made each association member also a member of the IaACE.

“That’s big kudos,” Watters said. “We went from 30 golf courses that would donate $65 every year to having 350 to 400 members just from the golf course side.”

“In an ideal world, you would go to the horticulture industry and bring in at least all the commercial entities under one umbrella because of the commonality on the two issues [pesticide and fertilizer use],” Bond said. “In Iowa perhaps the groundwork wasn’t done well enough. That was their intent. But with personalities, etc., it didn’t work. Now we work for the turf industry and in coalition with fruit and vegetable growers and others in the horticulture industry. If we have a long-term goal, it would be to unite those industries and have two lobbyists instead of one... It’s tough to have a personal relationship with 150 legislators.”

The pest-control association does not belong to IaAEC, although the large manufacturers are members, individually, of the alliance.

Watters noted that “there can be some hostility between the horticulture and agriculture sectors because the ag sector is monitored more by the federal government and we’re monitored more by the state. From time to time that can be frustrating, to say the least.”

But, as it operates, the alliance does not get involved in issues on which member groups don’t all agree.

“If we have a long-term goal, it would be to unite those [turf and horticulture] industries and have two lobbyists instead of one...” — Mona Bond

according to Watters. “When we call, they can put a name to a group,” he said.

Bond recalled the alliance’s impact on the home rule debate.

“When you tie together the alliance’s 537 members and 1,700 agribusiness members, it becomes a grassroots ground swell,” she said. “Legislators told us, ‘Please don’t get your members to call us again. We get the point.’ It made a huge difference.”

I’m sure everyone in the country will face the same battles. And I think we [in Iowa] will fight the same battles in 10 years that we fight now. We will be fighting home rule, for instance.

“But the more you’re informed on what your legislators are doing, the less likely someone will dump a new law on you.”

These Are Not Your Run-of-the-mill Chelated Iron Sources.

Glucoheptonates—natural organic chelates—set MultiGreen II® and MaxiGreen II® apart from all the less effective micro-nutrient sources.

These natural sugars prevent the micro-nutrients such as iron, zinc, copper and manganese from reacting with the soil, and keep them available to the plant for maximum root uptake.

Additionally, these sugars affix to the feeder roots. Being negatively charged, they act as additional CEC (Cation Exchange Capacities) and attract the positively charged nutrient cations, including Potassium, Phosphate, Calcium and Magnesium. Then, these nutrients are held for root absorption.

At the same time, the glucoheptonates are consumed by soil microbes as feedstuffs, multiplying the microbe population with added benefits.

Some of our advantages are hidden, but the superior results aren’t.
