BRIEFS

JUPITER, Fla. — The 427 golf courses built in the United States in 1997 have had a positive impact on the economy, according to Richard Norton, a National Golf Foundation vice president. Construction projects completed last year represented a total investment of roughly $1 billion, added nearly 8,000 new jobs and $400 million in gross sales/output to the U.S. economy. Norton estimates these facilities contribute from $14 million to $20 million in taxes.

CHARLOTTE, N.C. — Greg Norman is designing an 18-hole track that will be the centerpiece of a 1,200-acre development called The Point. This is Norman’s first project in North Carolina. It will feature 13 holes that play along Lake Norman. The private course is being developed by Crescent Resources and will open fall 1999.

PHOENIX — Del Webb Corp., a leading builder of active-adult communities for people 55 and older, has closed the sale of its course and country club facilities at its Terravita community in north Scottsdale. The property was sold to an equity membership group comprised of community residents. The purchase price was not disclosed.

New York — Duluth, Minn., and Rapid City, S.D., rank first and second, respectively, while Richmond, Va., and New York City are dead last when it comes to access to good, affordable public and municipal golf among America’s cities, according to a recent Golf Digest survey.

While golf is a game that is notoriously urban-unfriendly, many cities have much to offer the urban-dwelling duffer. In its upcoming July issue, Golf Digest lists America’s 309 cities and identifies which are the best and worst for golfers.

A joint effort between the Golf Digest Research Resource Center and the Department of Geography at Oklahoma State University, the ranking was based on six criteria: number of public courses per capita; number of municipal courses per capita; number of public courses per population of golfers; number of municipal courses per population of golfers; average star rating of the courses listed in Golf Digest’s biennial “Places To Play” guide; and the value rating of the courses listed in “Places To Play.”

After every city was ranked in each criteria, the rankings were totaled and divided by six to determine an overall

Palm Springs site gets environmental nod

PALM SPRINGS, Ca. — An environmental impact report for a proposed 18-hole track here at The Preserve at Mountaine Falls says noise, traffic, and the impact on plant and animals with the construction of a course is manageable. The report is scheduled to be voted on by the City Council this fall, according to the city planning office.

Both state and federal environmental officials have concerns about the impact a course would have on the endangered peninsular bighorn sheep. About 25 bighorns live in the San Jacinto Mountains. The animals are listed as endangered by the federal government, and as threatened and fully protected by the state.

City rankings

The proposed Arnold Palmer signature championship course would also include a clubhouse, putting area and 20 condominiums. According to Preserve officials, the project would: handle up to 140 golfers per day; include only one entrance; use electronic golf carts and electronic pagers.

Refurbished Errol Estate CC turning heads

APOPKA, Fla. — Members who banded together to buy the former Errol Country Club here for $4.9 million from Club Corp. of America, have put more than $1 million into renovations. Errol Estate Country Club, as it's now called, has been spruced up by architects Clifton, Ezell and Clifton. The company has recontoured, reshaped and returned the bunkers as best they could to the way course architect Joe Lee designed them 25 years ago.

Ezell, who lives on the course and once ran it for six years, says the renovations are a testament of how grass can recover. Errol is a throwback to the old days that offers three nine-hole layouts, built upon rolling hills and swales uncommon to the usual, flat Florida landscape. Nearly every hole winds up or down a hillside and offers three different course rotations.

WE'VE PUMPED UP THE PRESSURE ON PESTS.

THE JOHN DEERE RZI 700.

You pick the description. The John Deere RZI 700 fits them all. Now, you have an alternative to traditional methods. You can inject liquids directly to the root zone, eliminating drift and minimizing surface toxicity.

The RZI 700 delivers treatments up to six inches deep through 16 single- or multi-orifice nozzles. The 5,000-psi system ensures injections penetrate even hard-packed soil. And, at 3 mph working speed and 3 x 3-inch spacing the RZI 700 covers a lot of ground at 64,800 square feet per hour. It all adds up to bad news for pests like white grubs and mole crickets.

In fact, tests show that a high percentage of grubs are killed from the force of injecting water alone. Hard to get more environmentally friendly than that. For the name of your nearest distributor, or free literature, call 800-537-8233. Or write John Deere, P.O. Box 12217, RTP, NC 27709-9601. www.deere.com
