**BRIEFS**

**AGREVO JOINS PLATINUM TEE CLUB**

MONTVALE, N.J.—AgrEvo has announced its recent membership in the Platinum Tee Club, the premier supplier of PGA Tour properties and hire them to be the management and operational group of Colbert Hills.

When John Deere signed with the PGA Tour to be the exclusive supplier of mowing equipment to all TPC owned courses last year, we built a very good relationship with them," said Jim Porter, administrator, John Deere golf & turf sales. "Kansas State was able to get together with PGA Tour properties and hire them to be the management and operational group of Colbert Hills."

It was that initial relationship with the PGA that got Deere involved. According to Porter, this equipment will play a critical role in the development and maintenance of the course, a course that opens management avenues to future golf course superintendents through a "living laboratory" approach to learning.

"Superintendents can grow grass," said Porter. "But they don't seem to be prepared for many of today's challenges, in that they didn't have the business classes or the communications classes. This new program will help alleviate those deficiencies, and we think that our involvement will help move that process along."

John Deere also stands to learn from the course's unique function as classroom. Accord-

**CONTRACT SALES MANAGER**

WILMINGTON, Del.—Zeneca Professional Products has named Glen Johnson as contract sales market lead. In his new position, Johnson will be responsible for the sale of all technical active ingredients to customers in the non-ag and agricultural markets in North America. Johnson has worked with Zeneca for 15 years in the Ag Products Group and previously held the positions of technical services manager, western regional market development manager and product acquisition & licensing manager.

**WEBB ON BOARD AT PRECISION**

NORTHBROOK, Ill.—Precision Laboratories has announced that Lynn Webb has joined the turf, ornamental, and aquatic team as the western district manager covering Oregon, Washington, Idaho, Nevada, Utah, Arkansas and California. Webb brings 10 years of experience in the turf and ornamental market to Precision. Most recently, she was an area manager of professional fertilizer products for the golf course and landscape customers at J.R. Simplot in Southern California.

**HYDRO-SCAPE'S HUMPHREYS RETIRES**

SAN DIEGO—Archie Humphreys has retired as president of Hydro-Scape Products after 26 years with the company. Humphreys leaves a legacy of over three decades of work and support for the landscape and irrigation industry and has helped direct many industry associations and political coalitions such as the California Landscape Contractors Association, the Southern California Turfgrass Council, and the Council for a Green Environment. He is succeeded by Dale Tigli, a 20-year veteran of Hydro-Scape Products, who will assume the position of president.

**John Deere donates equipment to Colbert Hills**

**By Michael Levans**

MANHATTAN, Kan. — John Deere recently inked a commitment to provide the Colbert Hills Golf Course, the prototype Tournament Players Club (TPC) university course at Kansas State University (see GCN, June, page 17), with a full complement of new Deere turf equipment.

"When John Deere signed with the PGA Tour to be the exclusive supplier of mowing equipment to all TPC owned courses last year, we built a very good relationship with them," said Jim Porter, administrator, John Deere golf & turf sales. "Kansas State was able to get together with PGA Tour properties and hire them to be the management and operational group of Colbert Hills."

It was that initial relationship with the PGA that got Deere involved. According to Porter, this equipment will play a critical role in the development and maintenance of the course, a course that opens management avenues to future golf course superintendents through a "living laboratory" approach to learning.

"Superintendents can grow grass," said Porter. "But they don't seem to be prepared for many of today's challenges, in that they didn't have the business classes or the communications classes. This new program will help alleviate those deficiencies, and we think that our involvement will help move that process along."

John Deere also stands to learn from the course's unique function as classroom. Accord-

**NEW EUROPEAN market player: Flowtronex Europe**

**By Michael Levans**

DALLAS/PORTSMOUTH, England — With a goal of becoming more competitive in the European pump station market, Rosewood Equipment, the parent company of pump system manufacturer Flowtronex PSI, has purchased Portsmouth-based Action Pumping Services Ltd., the company's first international acquisition.

With Action under its wing, Rosewood has launched Flowtronex Europe Ltd., a brand new entity headed by Steve Hockley, Action's managing director.

Flowtronex PSI has had European representation in Hamburg, Germany for the past two years, however, according to Rosewood Vice President Dave Brockway, "When the local manufacturer presence and an entree into European markets that, to this point for the company, have remained untapped.

"We've sold some pump stations into the market," said Brockway, "but we were getting the high-end, high-profile, typical American designed courses.

"The problem is that for every one of those high-end courses there are 10 other, more typical European courses with smaller irrigation system needs. We have a very good product but it's an American product and it's a high-end product. Now we can manufacture locally; and from a cost standpoint, we can now make a more competitive product."

From Action's standpoint, Flowtronex offers a wealth of resources. "It's not only financial," said Hockley. "They bring personnel, marketing and technological expertise that a small firm just can't afford. That's going to be a big improvement for us, certainly as far as getting deeper into the markets in Europe."

**NEW PRODUCT OF THE MONTH: SMITHCO'S STAR SHIELD**

WAYNE, Penn.—The new Star Shield spray boom is now available with Smithco Spray Star dedicated turf sprayers. The boom is known for its precise application control and its minimum hazard to operators, golfers and the environment. A special feature of the Star Shield is its aerodynamic tear-drop design, which redirects the flow of air coming over the shield and minimizes wind-drift, especially in windy conditions, permitting better management of spraying schedules. Another special feature of the Star Shield is its particularly light weight. The entire unit weighs in at only 250 lbs., half the weight of the types of spray booms. For more information, contact 610-688-4009.

**International picks up half of Twin City**

**By Michael Levans**

HALSEY, Ore.—International Seeds, Inc., a Cebeo Agricultural Seeds Group member, reached a formal agreement to purchase 50 percent of the issued and outstanding share of stock of Twin City Seed Co. of Minneapolis, Minn.

Twin City Seed Co. was founded five years ago by John Glattly and several other investors to distribute turf and forage grass seeds and erosion control products in the states of Minnesota, Wisconsin, North and South Dakota. International Seeds is a leading breeder, producer and marketer of improved turf and forage grasses.

The joint agreement will provide for greater distribution and long-term growth in the Midwest market and represents a consistent source of supply and access to new varieties developed by IS/ Cebeo research. According to Glattly, "This agreement means another step forward in our rapid growth to become a major supplier of turf and forage grass products in the upper Midwest."

John Glattly will remain as President and General Manager of Twin City Seed Co., and Rich Underwood, President and General Manager of International Seeds, will become Chairman of the Board for Twin City Seed Co.
When a golf cart is a golf car
Making some sense out of FMVSS No. 100

BY BILL SIURU

For years, golfers have used electric and gasoline-power golf carts without the Washington bureaucrats giving them any thought. Then people living in gated communities, largely retirees in retirement communities in the sunbelt, started using them for transportation off the golf course and on public roads. Somewhere along the way, the golf cart got a new title, "Neighborhood Electric Vehicle" or simply NEV.

Realizing a potentially large market, Canada's Bombardier brought out its Bombardier NV [tm] with a top speed of 25 mph that could be operated on and off the golf course.

Seeing an increasing number of golf carts on city streets and recognizing better performing NEV, states like Arizona, California and Florida saw a need for ordinances covering where they could be driven and minimum equipment required. The federal government, namely the Federal Highway Traffic Safety Administration (NHTSA) saw another chance to protect us from danger, real or imagined. The result is the proposed Federal Motor Vehicle Safety Standard (FMVSS) 100 covering "low-speed vehicles."

Contrary to comedians on late-night TV shows who joked about golf cart needing air bags and crash testing, Standard 100 is far less draconian. First, it calls out the difference between a "golf cart" and a "golf car." Quoting from the proposed standard, "Golf cart means a motor vehicle, whose speed attainable in 1 mile does not exceed 15 mph, used to convey one or more persons and equipment to play the game of golf in an area designated as a golf course."

THE PROBLEM IS COMPLEX.

The temperature rises. So does the humidity. And you've got a problem, because conditions are perfect for algae and turf diseases like Brown Patch and Pythium Blight. If the health and vigor of turf are your responsibility, you really feel the heat.

THE SOLUTION IS SIMPLE.

The solution is Fore®. The active ingredient in Fore® creates powerful synergistic action with products like Subdue®, Aliette®, and Banol®, to control a wide spectrum of your worst summer challenges. Mixtures that provide a simple solution to some tough problems.

FORE®…ALL THE RIGHT REASONS.

And there's more. Like the way Fore controls over a dozen fungus diseases. Easy-to-use packaging combined with cost-effective, broad-spectrum turf protection make Fore your best solution for complicated problems. Call 1-800-987-0467 to get more information.
