ASPEN GOLF NAMES KELLY

PHOENIX, Ariz. — Aspen Golf has announced the addition of Kraig Kelly as Southwest region manager. Kelly is based here and will be responsible for providing services in Arizona, Nevada and California. Aspen Golf specializes in the design and construction of golf course water features including lake construction, rock walls and waterfalls, aeration, timber walls and bridges, decorative shorelines and streams. Kelly may be contacted at 602-307-0285.

GOLF RESOURCES CHANGES NAME

DALLAS — The golf course design firm Golf Resources Group has changed its name to D.A. Weibring/Golf Resources Group Inc. (Weibring/GRG) to capitalize on the national identity of 22-year PGA professional golfer and company chairman D.A. Weibring. Weibring was one of the founding principals of the company while continuing to play on the PGA Tour, where he won five championships. The Plano resident also won twice overseas. The company has also announced the addition of Steve Wolfard to its design team. He is a former executive with Jack Nicklaus/Golden Bear International, Inc. and Gene Bates.

IMG’S RIELLY MOVES TO SAN FRAN

SAN FRANCISCO — Mike Rielly, senior international vice president at IMG, transferred on July 1 to IMG San Francisco, from where he will oversee IMG's global golf course design business and assume direct responsibility for these activities in North and South America. Rielly has lived in Asia since 1990. He first moved to Tokyo from IMG's world headquarters in Cleveland in order to establish IMG's first Asian real-estate office. Rielly was most recently managing director of IMG Singapore, headquarters for Asian real estate, and managed IMG's real-estate staff in Tokyo, Hong Kong, Beijing, Manila, Jakarta and Singapore.

ERIC WEISKOPF JOINS RODGERS

Eric Weiskopf is the newest member of Larry Rodgers Design Group (LRDG), a golf course irrigation consultant. LRDG opened a Phoenix office in May, managed by Weiskopf, to respond to the demand of existing golf course GPS mapping services. PGA Tour great Tom Weiskopf's son, he was on the golf teams of Ohio State and the University of Arizona, followed by four years of caddying on the PGA Tour, and worked in the construction industry for one year. Weiskopf's office is located at 4408 N. 24th St., Phoenix, Ariz. 85016; phone 602-725-4693.

BRIEFS

Not all 100% sand greens 'California'

By Dr. Michael J. Hurdzan

There seems to be a false notion that any golf green constructed of 100-percent sand is a California green. This is incorrect and I will explain why people have experienced such varying degrees of success with pure sand construction.

When someone tells me that they built a California green, the first question I ask is "Which lab did you use to test your sand?" Nearly always I am told that no laboratory was used, so my second question is "Then, how do you know it is a California green?" The point is that not all 100-percent sand greens are true California greens as defined in publication #21448, The Sand Putting Green Construction and Management available from: Publications Division Agriculture and Natural Resources, University of California, 6701 San Pablo Ave, Oakland, CA 94608-1239.

By definition, California greens are made of 100-percent sand that meets the following particle size distribution: 90 to 100 percent of particles with a diameter between 0.1 and 1.0mm, and 50 to 70 percent of particles with a diameter of 0.50 to 0.25mm. Angular to sub-angular shape is preferred. Any sand outside that range may work just fine, but it is technically not a California green — it is a 100-percent sand green.

Twin Bridges opens for play; USGA Seniors visit a month later

DANVILLE, Ind. — Twin Bridges Golf Club, a unique environmental collaboration between Lohmann Golf Designs (LGD), Heritage Golf Management, Waste Management Inc. and Audubon International, has opened for play here outside Indianapolis. One month following a May 29 grand opening ceremony, Twin Bridges played host to USGA Senior Amateur qualifying.

Named for a pair of railway treaties that cross the property, the Twin Bridges is owned by Waste Management, the rubbish disposal company which operates a landfill on another portion of the 800-acre property. Bob Lohmann routed the 18 holes so as to skirt the landfill completely. His construction firm, Golf Creations, built the course with help from Heritage, which stayed on to manage the facility.

"The question is, what happens in the spring when people are watching The Masters and want to golf and it is sunny, but the course is a bog and the balls are plugged," Steidel said. "Here in the Northwest we get 40 inches of rain a year, but we also have 240 days of clouds, which means the golf courses don't get the sunshine needed to dry out. Muddy conditions can be standard in March and April, cutting down on play." The 75-year-old Cedarcrest is tucked into 120 acres of rolling, tree-covered terrain. For years it was the only place in the area to play, but as new courses opened, the need to improve in order to keep up with the competition became evident.

The city officials' decision to follow Steidel's advice and close the course for a new "topping" came on a sunny day in January 1997 when nearby Lynwood Municipal Golf Course, which Twin Bridges was constructed with the utmost environmental sensitivity; it has already earned "Signature" status, the highest designation bestowed by Audubon International (AI). "The course is a real showpiece," said Ron Dodson, president of Sellkirk, N.Y.-based AI, a nonprofit organization that facilitates responsible golf course development and maintenance practices worldwide. "The work Bob Lohmann has done at Twin Bridges has been so tremendous. He wouldn't even authorize the clearing of site lines until we walked the parcel together. When we had, he went out of his way to maintain natural riparian corridors."

While the sensitive design and construction of Twin Bridges stand as considerable achievements, California greens have also been difficult to maintain.
