Versatility key to new utility vehicles

By ANDREW OVERBECK

Superintendents demand a lot out of their utility vehicles. They must be versatile, able to tackle rough terrain and wide ranging jobs, yet they must also offer a wide array of operator comforts. And since they live on a golf course, they must be relatively quiet and pleasing to the eye.

It is a small wonder how utility vehicle manufacturers keep up with the growing list of operator demands, but it does explain the myriad of product innovations and new vehicles on the market today.

“These have to be go anywhere, do anything vehicles,” said Peter Whurr, vice president of product development for Textron Turf Care and Specialty Products. With that in mind, the bulk of product innovations revolve around beefed up suspensions and drive trains.

“The advantages of a utility vehicle is that they have many of the features of a pick-up truck with a lot less of the cost,” said Ron Skenes, manager of communications for E-Z-GO. “The Workhorse LX utility vehicle has the big tires and suspension that allows it to handle a variety of applications on the golf course.”

While utility vehicles need to be capable of going off-road, they can’t have a harsh truck-like ride. Toro concentrated on stability and handling when designing the new Workman 1100 that is due out in February 2000.

“Stability and ride comfort is important,” said Toro’s marketing manager Neil Bornstein. “Our active in-frame suspension allows for a comfortable ride and helps to provide excellent traction."

E-Z-GO Textron, Cushman merge operations

AUGUSTA, Ga. — E-Z-GO Textron and Cushman have announced a newly formed merger. E-Z-GO Textron will manage all sales and marketing operations for the two companies out of its August, Ga., headquarters although Cushman’s manufacturing operations will remain in Lincoln, Neb.

In 1998, Cushman was added to Textron as a result of a merger between E-Z-GO’s parent company, Textron Inc. and Cushman owner, Ransomes.

"Cushman's high visibility and strong brand name within the industrial and commercial markets make it an excellent partner. The merger between the two companies gives us an unparalleled line of industrial and commercial vehicles," said L.T. Walden, E-Z-GO’s president.

Durable, Flexible, Affordable

Durable

Fore-Par direction and rules signs are weather proof and golfer proof. Wind. Sun. A whack with a golf club. A swift kick. They’ll stand up to almost anything. They retain their flexibility and appearance indefinitely, even under extreme weather conditions. Messages are screen printed on one or two sides with a tough, pliable coating that bonds to the sign’s surface.

Flexible

Just one of the words used to describe Fore-Par service. Do you need a single sided sign printed on both sides? Just ask. Want a custom message? No problem. Have a special color requirement?

Slam-Dunk. Need them fast? Our speciality! When it comes to flexibility of service, nobody comes close to Fore-Par.

Affordable

New production techniques and improved raw materials have provided us with significant savings which we are pleased to pass along to our customers. If you thought the legendary Elasto-Signs™ were too expensive, it’s time to take a second look. Our new affordable pricing plus years of durable service make Fore-Par Elasto-Signs™ the best buy on the market.

For more information on the Fore-Par accessories line, Call 800 843-0809, and get more for your money from Fore-Par.
Metallic Power

The reaction takes place in the presence of potassium hydroxide, the liquid electrolyte found in alkaline disposable batteries. "In a lead/acid battery you're using the lead/hydrogen reaction. In this you're using the zinc/oxygen reaction which generates electrons," said Dana Lang, director of advanced turf care at Toro. "This device consumes zinc and generates electrons."

gasoline...You're mixing in three ounces in premix. So it goes from a $1 to $1.70 for that gallon." But cost concerns, said Miller, should be overlooked once superintendents embrace the oil's most marketable property — it's kind to turfgrass.

"The largest volume selling product that we do is a bio-degradable hydraulic fluid for greens mowers, the EnviroLogic 100 series," said Miller. The 100 series has been on the market for three years. Next year we're planning a few new products. "But according to Colborn, it's going to be one step at a time."

"When the zinc/air fuel cell is exhausted, zinc pellets are pumped into the cell along with a liquid electrolyte from a "vending-machine-sized" recycling/refueling unit. At the time of refueling, the zinc oxide byproduct produced by the reaction is pumped into the unit and is turned back into zinc pellet form. According to Colborn, this refueling takes approximately five minutes, while the recycling inside the "vending machine" is continuous."

"Aside from the recycling advantage, there's up to seven times the energy per pound in zinc/air versus lead/acid," said Colborn. "We're not promising that at the beginning, but we are promising nearly double the range of the lead/acid system as development continues."

"What excited us [Toro] about this is that we can get something on the order of 4,000 watts for three hours for about 250lbs. of weight on the mower. That's very easy," said Lang. "Electrical power can be different from mechanical power because what we're talking about is an average power. We can generate 4,000 watts continuously for three hours."

"For the greensmower prototype what we'll probably end up doing is supplying peak power with small lead acid batteries that are essentially charged by the fuel cell. Those small lead acid batteries will be able to provide up to peak power, maybe 20 horsepower, so we can climb as well as we climb with a 20 horsepower engine but you don't burn 20 horsepower all the time," said Lang.

While the idea of recyclable energy for turf care equipment is sure to spark the interest of superintendents, there are several barriers that have to be overcome — as in any new technology. "The capital cost will be comparable to gas, but it's going to be more expensive than lead/acid," said Colborn. "But it's a totally new technology and at this point the principal downside is that it hasn't been proven yet."

"While Metallic Power has a good change at making this work, the big question is will it be commercially produced?" said Lang. "We've been talking about new battery technology for many years and nothing new has been commercialized."

But according to Colborn, it's going to be one step at a time. "It's not going to happen tomorrow," said Colborn. "We're producing Alpha prototypes this year. Next year we're planning a full demonstration with 50 units. The following year we go into production."

"There are many advantages to an electrical product," said Lang. "You have zero emission, you can have a complete, electric computer-controlled machine. You can do things to make the machine more reliable, like limiting and controlling deceleration and acceleration rates."

Utility vehicles

because it keeps all wheels on the ground at the same time."

Club Car's new XRT 272 due out in June 1999, also features a suspension upgrade. "We not only have 11 inches of ground clearance, but also a fully independent front suspension and semi-independent rear suspension that enhances traction and gives the vehicle a better ride," said David Turner, brand manager for Club Car.

However, Club Car also designed the XRT 272 to be at home in both construction and turf applications. "The differential lock can be disengaged to make it safe for turf applications as well," said Turner.

Indeed, utility vehicles have to keep a low profile on the golf course. For that reason, John Deere is introducing the E-Gator utility vehicle to offer superintendents a quiet and efficient option. "Yet this is a true work vehicle," said Collis Jones, manager for golf and turf vehicles for John Deere. "It offers the same capacity as the Turf Gator and will run all day on a single charge."

Kawasaki will also be introducing a quieter version of their Mule 2520 later this year. "It will feature turf tires and sound deadening to tune it specifically to turf applications," said Mike Mount product specialist for utility vehicles at Kawasaki.

When it comes to vehicle durability, plastics are making a huge impact—or avoiding them according to Textron's Whurr. "On the Turf-Truckster, plastics help to cut down on costs, especially when used on the front end where collisions are likely to happen," said Whurr.

While many of the vehicles have plastic hoods, Toro's new Workman 1100 features a plethora of plastic parts. "We even put a plastic bed on the back, which is not only quieter, it is dent and rust proof," said Bornstien. In designing the 1100, plastics and computer aided design also allowed Toro to integrate storage features under the seat and in the dash board to give superintendents more places to stow their gear.

Other product innovations key in on making utility vehicles more comfortable to operate. Many manufacturers, like John Deere and Club Car will be featuring increased leg room and high-back bucket seats. "It is all well and good to make it do everything from a work perspective," said Whurr. "But the vehicles also have to provide operator comfort."

A handful of zinc pellets used in the charging of the zinc/air fuel cell.
