COORE, CRENSHAW MAKE ISLAND MUSIC

By Mark Leslie

EAST HAMPTON, Long Island — The 40-year dream of the three-generation Bistrian family to build East Hampton Golf Club here has come true, and with one improbable improvement: Ben Crenshaw, with partner Bill Coore, designed it.

"I never dreamed of involvement from someone [with Ben's fame]," said Barry Bistrian, son of Bistrian family patriarch Pete. "People here on the island want a high-end golf course. We wanted it the best it could possibly be. But it's a lot more golf course than I ever imagined."

The entire Bistrian family has been heavily involved in the project, including Pete and his wife Mary, both in their 80s, their children Bonnie Krupinski and Barry, president of Bistrian Gravel Corp., and Barry's sons, RJ and Patrick (a zero handicapper).

"Some of the nicest people," Coore said about the Bistrians. "We were so fortunate to get this job."

Pete Bistrian, whose contracting business had worked on some golf courses, first envisioned a course on the property in the mid-1940s. He cleared the "links" part of the land to raise potatoes in 1946-47, farmed it until the mid-1960s, then received approvals for the golf course in 1978. But, because of the demands of their wide-ranging businesses and various environmental and water permitting problems, the Bistrians got only as far as laying out some holes. When Crenshaw and Coore were on Long Island's north side, they found that the terrain allowed for a layout and concept different from the typical "links" style.

Golf course architecture hits Web

EUGENE, Ore. — What began as the submission of additional golf courses over WON.net by devoted computer golfers to supplement the shipping of Sierra Sports’ PGA Championship Golf, has escalated into the submission of additional golf courses over the Internet. The Course Architect is a tool that creates golf courses with exacting 3D detail, right down to the elevation of greens and vegetation surrounding the fairways. With names like “18 The Hard Way,” “Deerfield Trace,” and “Bogey Shores,” Course Architect submissions are designed to meet the standards of the Sierra Sports Golf Association (SGA). To further personalize the experience of Internet golf and Course Architect creativity, log on to the SGA on WON.net (http://www.won.net/sga) and download the new Library Creator, which works with the Course Architect to import the player’s choice graphics, textures, and even location-specific sounds. From banners to beer cars, the player determines how his or her home course will appear for each round.

The SGA officially launched the SGA Season II on WON.net as the 2000 PGA Championship Tour and exclusive SGA Tour inspire players of all skill levels to compete for prizes.

EAST HAMPTON, N.Y. — A veteran East Hampton Golf Club sits waiting to open its doors next spring. “I can’t tell you how much fun it’s been,” said Coore. “We did some things we would not normally do. The greens are extremely interesting — one might even say ‘quirky’ in places. The National (on Long Island) or Somerset Hills Country Club (in New Jersey) have some of the most incredibly creative and yet workable greens that have ever been done in this country, so we felt as if we should make these greens imaginative and fun. You can do that on a course that is not overly demanding from tee to green, and this sits on only 123 acres. And so we did.

“From the standpoint of contours and types of holes, we had long wanted to do this. But we felt it would be received better in this part of the country, given the people who will be playing it. We certainly could not do this in a resort and most other courses.”

“East Hampton is wonderful because of the main ingredients of sand and the native grasses,” said Crenshaw. “There is a myriad of things that sand helps so much. It’s certainly aesthetics, it’s raw material, it’s slashes of sand that lead one to believe the course is more natural...

Coore described the 18 holes as three different types of courses. "Some of it is an open field that is flat — very much like Garden City [Golf Club in New York], with native grasses and some hummocks and interesting bunkers and greens," he said. "Then the 17th and 18th holes have beautifully rolling terrain — almost a parkland look. And the front nine has a Pine Valleyish look. It has some 30-foot elevation changes. As a result of the sand, we did some holes with large exposed sand areas."

The property, Coore added, "is not the likes of The National or Shinnecock [Hills Country Club in Southampton]. We started with the concept of just doing an interesting, fun golf course. We knew it was not going to be long. The family wanted us to do the best for this property — and for golf." To that end, there are no homes on the property and Coore and Crenshaw designed it to be a walking course. There are no cart paths.

Crenshaw and Coore, Barry Bistrian said, "came here and, right from the get-go, what we wanted to do fit in with the way they do things."

Coore gave accolades to shapers Jimbo Wright, Dave Axland and Jim Craig, and to bunker-building expert Jeff Bradley.

General Manager Tom Barnard of Buena Vista Hospitality Group, a veteran of the Orlando and Hilton Head areas, said he is in the midst of getting permits for an interim clubhouse. Membership, he said, will not exceed 250.

The best overcoat you’ll buy this winter

Protect your valuable plants with the best winter overcoat you can buy — Transfilm Antitranspirant.

¬ Overcoat trees and ornamentals to protect from winter dessication.
¬ Overcoat fall transplanted trees and shrubs for sure success.
¬ Overcoat fungicide applications on greens, tees and other highly managed turf sites.

"For some 15 years we have used Transfilm for winter protection of new evergreen transplants and specimen stock in and around the Road salt and salt vapors coming from ice melt plus exposure to drying winter winds can create dissatisfied customers and problems for us. Transfilm reduces these risks. We view it as winter insurance."
