HILLS REBUNKERING LINKS COURSE AT HALF MOON BAY

HALF MOON BAY, Calif. — The Links Course at Half Moon Bay Golf Links south of San Francisco continues its renovation program under the direction of noted golf course architect Arthur Hills. Improvements to the back nine were completed in January 2000 with the front nine work set to begin this month and finish in November.

An entire new irrigation system is being installed throughout the course and enhancements to the drainage on the course are also being made. The project includes rebuilding bunkers, moving some fairway bunkers and the shifting of some tees. No changes are being made to the green surfaces.

Hills, who designed the widely acclaimed Ocean Course at Half Moon Bay that opened in 1997, talked about the objective of the Links course efforts. "The goal is to make the Links course equally strategic, beautiful and fun to play," he said. "The new carefully placed, sculptured bunkering does much to achieve that goal."

The improvements to the Links course are being done in conjunction with the planned opening of The Ritz-Carlton at the Half Moon Bay Resort. Hotel guests will have the availability of two golf courses of the highest quality to choose from. The courses at Half Moon Bay Golf Links are also available for public play.

PENN UNIVERSITY LAUNCHES TURF WEB SITE

UNIVERSITY PARK, Pa. — Penn State’s center for Turfgrass Science recently developed a web site for program information. The site contains educational program information, research reports, outreach activities and faculty, staff and graduate student contact information. The address is turf.cas.psu.edu/

In conjunction with Ohio State University, Penn State has also published a new bulletin entitled “Factors Affecting Green Speed” for golf course managers and golfers alike. This publication covers management practices that impact ball roll on putting greens. The authors, Patty Sweeney, George Hamilton, and Karl Danneberger, incorporate research data in an easy-to-read format.

CUSTOMIZED TORM WORKMAN ALLOWS ON-COURSE EQUIPMENT REPAIRS

BY TERRY BUCHEN

PALM BEACH GARDENS, Fla. — Equipment managers go out on the golf course to monitor the operation of any given piece of equipment and to make repairs to implements that must be taken care of out in the field. In more serious situations, the implement must be brought back to the maintenance building.

The latest golf course management trend is to have a separate vehicle that is equipped for easy and quick repairs by equipment technicians. One such specialty equipment mechanic’s vehicle located here is state of the art, with the proper tools needed to do the job right.

The Frenchman’s Creek Country Club is a private 36-hole residential golf community where F.W. “Chip” Fowkes III, superintendent, is very aware of the best ways possible to make his preventive maintenance operation a complete success. What better way than to have former helicopter mechanic, Mike Gatch, on his equipment maintenance team as the head mechanic?

“We have a Toro Workman 3300-D Turf Vehicle that is equipped with a PTO dual-cylinder air compressor for air tools and for tire repairs. This is for the exclusive use of the head mechanic and assistant mechanics. There is a large tool box for all mechanical tools and a small tool box for jumper cables and chains, spare fuel containers, a single point hookup for jumper cables and a hydraulic remote system,” Gatch said.

The Toro Workman mechanic’s vehicle also doubles as a tow truck. It has a 1,000-pound capacity 12-volt warn winch, with forward and reverse capabilities. Gatch said it uses aircraft wire rope, 20 feet in length. Two-inch tubular steel was welded together to a thick steel plate that is bolted to the vehicle’s dump body floor.

All of this customization was done in-house. “We use our tow truck quite a lot to pop the head on a flat tire, tow equipment that must be returned to the shop for more specialized repairs, and even for the occasional member’s golf cart that unfortunately goes into the golf course lakes,” Fowkes added.

With all of the specialized and frequently more sophisticated golf course maintenance equipment being used more often, it makes a lot of sense for equipment managers to have their own properly equipped vehicle that can be put into action quickly instead of waiting for another turf vehicle to return to the maintenance area. Many times, the equipment mechanic can fix the problem on the spot, saving time. And if more extensive repairs are required, this type of innovative vehicle can tow it back to the shop quickly, efficiently and easily.

Bear Trap Dunes, growing to 27 holes, wins Audubon nod

OCEAN VIEW, Del. — At Bear Trap Dunes Golf Club here, crews have broken ground on Rick Jacobson’s third and final nine holes, complementing his 18 championship holes that opened last year to rave reviews. The new nine, opening next year, will share design characteristics with the existing course, where Jacobson employed a dunes concept to give a piece of that farmland the look of the coastal Delaware landscape. The new holes are expected to open next year.

The layout is a par-36, measuring 2,450 yards to 3,400, depending on which of four tee boxes golfers use. It features six lakes, which will operate not only as hazards but as part of the local storm water management system. The native sand used to create the dunes was excavated in the process of creating the lakes.

The Bear Trap course also has received certification in environmental planning from the Audubon Cooperative Sanctuary System (ACSS), administered by Audubon International and sponsored in part by the United States Golf Association. Through the program, the course will be involved in projects that enhance habitat for wildlife and preserve natural resources.

“There is much more to a golf course than green grass,” said superintendent Tim McMahon. “We’re committed to responsible stewardship of the land, and in conjunction with the ACSS, we hope to bring the golfer and nature closer together.”

Audubon-related projects that have been implemented so far at Bear Trap Dunes include: building and placing nesting boxes for cavity-nesting birds such as bluebirds and swallows, regular monitoring of pest incidents and population, establishing wetland shrub corridors throughout the golf course, and completion of Audubon’s environmental audit.

The 27-hole complex is the centerpiece of a neo-traditional 700-home residential community called the Village at Bear Trap Dunes, being developed by Carl M. Freeman Associates, Inc.
BUT HOW ARE YOUR BUNKERS?

Introducing The New Tournament Rake.
Our new-design finish implement delivers the perfect sand conditions for the best bunker play. So revolutionary it is being patented. Constructed of high grade, rust-proof stainless steel, its new and flexible raking teeth and specially designed blades create the ideal firmness and finish for bunker sand. And it operates silently. Only from Smithco.

Our Speed Boss Invention. The patented, bunker finish speed control that prevents sand throw-out and greatly reduces the time and labor required for edging. You adjust and pre-set the finish speed and the system takes over automatically when the raking implement is lowered, then restores the normal ground speed when it is raised. So, you're the boss. Only from Smithco.

Many Other New And Exclusive Features.
Our liquid-cooled gasoline engine • hydraulic power steering • extra-high ground clearance for easy bunker entry and exit • and our patented, silent, electric-powered “E” model. • Only from Smithco.

Our extensive line of bunker rakes and implements, with their many new and innovative features, offers by far the widest choice of models and pricing, to meet every need and budget. Call your Smithco distributor today for a demo. Seeing is believing.
