

Big names move to famous clubs

PEBBLE BEACH, Calif. — The latest in a series of job moves by well-known golf course superintendents is that of Pebble Beach Golf Links first assistant **Eric Greytok** to the head superintendent position.

Greytok succeeds **Mark Michaud**, who took the post at Shinnecock Hills Golf Club in

Southampton, N.Y.

Several other well-known superintendents have moved on recently, leaving famed golf courses for other well-known facilities.

Paul Latshaw moved from Congressional Country Club in Bethesda, Md., to Winged Foot Golf Club in Mamaroneck, N.Y.,

replacing **Bob Alonzi**. Alonzi had gone to Fairview Country Club, but soon left in favor of Fenway Golf Club in Scarsdale, N.Y.

Meanwhile, Oakmont (Pa.) Country Club's **Mark Kuhns** is in new digs at Baltusrol.

Pebble Beach's Greytok is a former first assistant superintendent at Congressional Golf Club and Merion Golf Club, and once worked at Riviera Golf Club.

MAINTENANCE

New method making hydroseeding more viable

Continued from page 35

"It will stick to the ceiling," Schrand said. "Before this breakthrough, hydroseeding was just a mix of seed, mulch, fertilizer and a bunch of water. Crews were spraying rivers. We have turned 180 degrees

from that. What this system sprays out is a thick, moist mulch material, with everything held in suspension. When it hits it sticks, gives good uniformity of germination, no pockets or voids."

How steep a slope can this system handle?

Schrand said: "We've actually done concave slopes. That is why when this stuff germinates it grows instantaneously and very uniform. We are not promoting weeds, which can be a problem with a straw or hay mulch."

How quickly does growth occur?

"We just finished a big film shoot on a yard that was 4 weeks old and it looked like an established lawn," he said. "Grass grows very erect, like bristles on a toothbrush. There is no laydown like you get with sod."

Schrand explained that success comes because at the time of mixing, which takes from 15 to 25 minutes depending on the size of the tank involved, the seed is soaking up the hormones, vitamins and nutrients.

"Then it's sprayed out with a soft, wet, very protective mulch material," he said. "Further, it takes just one or two people to hydroseed and they can cover from 3,500 square feet to an acre per tank load."

The key element to success is water, he said, adding: "If you have irrigation, you're going to have excellent results. The seed, put down at recommended rates, is evenly dispersed. From the machine, an operator can reach at least 250 feet with no problems, and some have done as much as 400 feet, thanks to extra hose."

He reports there's no cleanup because the system uses all biodegradable products. "The wood products and tackifier enhance microbial activity and people can walk on it after the first mowing," he said. "Some courses look like established lawns in just four weeks."

Asked about the economics of this system, Schrand mentioned a superintendent who had a \$16,000 bid for sod, but got those areas hydroseeded instead for \$5,500.

"Further," he said, "the grass was more erect and thicker than in the places where he had used sod. This system gives the seed everything it has to have, except soil temperature and irrigation. But, the fuming acid in the mix can realistically warm the soil by 3 degrees." ▶

A friendly design in a hostile environment...

Rain Bird's Exclusive Top-Serviceable Rock Screen EAGLE™ Rotor.

Don't let sand, silt and harsh chemicals get the best of your rotors. Get the rugged durability and low maintenance of Rain Bird's most advanced line of rotors.

- EAGLE™ gear drive rotors feature the Top-Serviceable Rock Screen/Integrated Valve Seat* that saves time and labor by allowing you to remove debris and flush pipes without digging.
- The new one-piece snap cover easily secures the internal assembly in place and provides quick access.
- New Shovel Guard™ protection eliminates damage to hydraulic tubing on electric rotors.
- New higher stroking valves let debris pass through to prevent weeping.
- The new wind fighting dual spreader and high performance nozzles improve water distribution.
- High 3.25" pop-up height raises stream above tall grass, prevents puddling and ensures proper water distribution.

Give yourself a fighting chance. Get the new EAGLE rotors and leave the dirty work to us.
