BRIEFS

TRAILIES REPLACES MILLER AS CLUB CAR CEO
AUGUSTA, Ga. — Philip J. Trailies has been named president and chief executive officer of Club Car, Inc. Trailies, 55, succeeds Montague Miller who announced his retirement after 14 years with the manufacturer of golf transportation vehicles. Trailies spent 21 years with Textron Inc., the first 14 of which were in the company’s EZ-GO golf car division, where he rose to the position of senior vice president. Subsequently, he spent seven years as president of Textron’s Turf Care and Specialty Products division for the Americas.

FLOWTRONEX NAMES OLSON
DALLAS — Flowtronex PSI has named Allen Olson to head up its new fertigation initiative. His responsibilities will include support and sales across North America for the fertilizer injection systems division. Olson, a former superintendent, has owned a fertilizer business and has consulted with industry companies including Flowtronex.

BASF APPOINTS AUSTIN
RESEARCH TRIANGLE PARK, N.C. — BASF has appointed Charles Austin to the post of senior sales specialist for the turf and ornamental and pest control groups headquartered here. Austin will be responsible for product sales to distributors and end-users in the Southeast.

CEBECO PROMOTES JOHNSON
HALSEY, Ore. — Cebeco International Seeds has promoted Steve Johnson to director of research. He will manage all aspects of the company’s turf and forage grass breeding and development programs. Johnson, who has been with Cebeco since 1989, was previously a senior research scientist for the company.

TECHNOLOGICAL ADVANCEMENTS, ALTERNATIVE ENERGY TO DRIVE IMPROVEMENTS IN VEHICLE EFFICIENCY

By ANDREW OVERBECK

While energy costs continue to rise across the country, alternative energy research is coming closer to providing potentially lower-cost, more efficient options for golf course vehicles.

ADD SUN, DOUBLE RANGE
Among the most simplistic alternative energy solutions that exist on the market today is the SunCaddy system from the PowerLight Corp. The company retrofits golf cars, installing solar panels on the roofs that continually replenish the vehicle’s battery.

This both lengthened the runtime of the golf car and reduces the amount of charge that must be replaced after a day’s use, said the company’s executive vice president, Dan Shugar. “This doubles the range of the car and extends the life of the battery,” he said.

Several courses in Hawaii and California are currently using the SunCaddy and interest has risen due to energy concerns out west. “We have had so many inquiries it has been unbelievable,” Shugar said. “We are bringing on new manufacturing capacity and hiring more engineers and sales representatives to keep up with demand.”

The system can be retrofitted onto any golf car and the cost is added onto the car’s lease package. “Depending on the area, the extra cost is between $15 and $28 a month,” said Shugar.

BUILDING A BETTER BATTERY
Metallic Power is currently developing a battery that uses zinc/air technology that packs up to 10 times the energy density of traditional lead-acid batteries. The system is quiet and emission free and recharges quickly, using recyclable zinc fuel.

“Theoretically, the zinc/air battery can keep regenerating indefinitely,” said Metallic Power spokeswoman Susan Connell.

The company is currently working with the Toro Co. to develop a zinc/air powered triplex greens mower and has worked with Textron to test the system in a Cushman utility vehicle. The zinc/air

COLUMBIA’S ACE EPS CAR RUNS 115 MILES ON SINGLE CHARGE IN VEHICLE CHALLENGE

By ANDREW OVERBECK

REEDSBURG, Wis. — In a golf car endurance challenge staged in Tuscon, Ariz. in April, Columbia ParCar’s new ACE EPS model traveled 115 miles on a single charge, out lasting the other vehicles in the test.

Dubbed the “Duel in the Sun” by Columbia, the challenge put the ACE car up against its own standard model car and a 2000 model Club Car. “The Club Car went 63.2 miles and our standard car went 97.6 miles,” said president Todd Sauey. “Our EPS car surpassed 100 miles on a single charge.”

The duel was arranged after a Club Car dealer ran an in the Saddlebrooke Progress that challenged the ACE system’s efficiency claims. Club Car was invited to the test, but declined to attend, said Sauey.

PERMANENT MAGNET TECHNOLOGY
The ACE system was introduced earlier this year by Briggs & Stratton and Columbia ParCar. The motor features permanent magnet technology which allows it to be 50-percent smaller and 20 pounds lighter than the conventional electric motor. As a result the car is 30 pounds lighter and ten to 15 times more efficient than Columbia’s original car.

During the test, the cars were driven around a four-mile loop. Each car was loaded with 400 pounds and checked by Michael Olson, a Trojan Battery representative, who verified that the batteries were all of equal age, voltage and specific gravity.

After the cars were driven two loops, they rested for 15 minutes before continuing. The test started at 8:15 a.m., and the ACE car did not run out of juice until 10:53 a.m., said Sauey.

Since we are not familiar with the test referenced, we cannot comment on its validity or other claims made by the manufacturer,” said Gary Stough, marketing manager for Club Car. “However, we are delighted to be considered the gold standard against which other manufacturers seek to measure up.”

BUILDING A BETTER BATTERY
Metallic Power is currently developing a battery that uses zinc/air technology that packs up to 10 times the energy density of traditional lead-acid batteries. The system is quiet and emission free and recharges quickly, using recyclable zinc fuel.

“Though ideal, the zinc/air battery can keep regenerating indefinitely,” said Metallic Power spokeswoman Susan Connell.

The company is currently working with the Toro Co. to develop a zinc/air powered triplex greens mower and has worked with Textron to test the system in a Cushman utility vehicle. The zinc/air

YAMAHA GOLF-CAR RESTRUCTURES TOP MANAGEMENT

By ANDREW OVERBECK
NEWNAN, Ga. — Jim Robinson has stepped down as president of Yamaha Golf-Car Co. as part of the reshuffling of its corporate leadership. Robinson, who was also serving as senior vice president of Yamaha Financial Services, will now concentrate his efforts on that position.

Bill Szarowicz has stepped in to run Yamaha Golf-Car.

“Robinson was wearing two hats,” said Szarowicz. “He came on 18 months ago to help Yamaha Golf-Car out, but as the business is growing and leasing is becoming such an important issue for all of our divisions, it got to be too much. He will still play an active role on the golf car side because 60 percent of our business is leasing.”

Szarowicz comes to Yamaha Golf-Car from 24 years at lawn mower manufacturer Snapper Inc., where he served in every position from sales and marketing to advertising.

“My background is heavy into two-step distribution, and that is exactly what we do here at Yamaha,” he said.

GROWING THE COMPANY
Szarowicz comes to Yamaha Golf-Car from 24 years at lawn mower manufacturer Snapper Inc., where he served in every position from sales and marketing to advertising.

“Though ideal, the zinc/air battery can keep regenerating indefinitely,” said Metallic Power spokeswoman Susan Connell.

Textron Golf and Turf teams with ProLink

AUGUSTA, Ga. — Textron Golf, Turf & Specialty Products (TGTS) has announced a strategic alliance with ProLink, a maker of GPS golf course information management systems.

Under the terms of the agreement, ProLink will utilize the E-Z-GO brand network to sell and service GPS systems in the United States and Mexico.

“We see this partnership as an opportunity to enhance our customer support by combining the latest in GPS technology with our golf cars,” said TGTS executive vice president David Rivers.

One of the primary reasons for the strategic alliance is the synergistic applications that complement TGTS’s current and future products. ProLink’s core competency focuses on hardware and software technology development. ProLink holds six patents for the use of GPS and has several more patents pending. One of the unique characteristics of ProLink is that all of its technology was developed in-house, allowing for greater control of quality, reliability and time-to-market for new features.

“We have closely monitored the development of this technology since its inception,” said L.T. Walden, TGTS chairman and CEO. “ProLink has clearly set the standard for the GPS industry. It made sense for us to establish a strategic relationship with ProLink.”

Headquartered in Tempe, Ariz., ProLink is currently featured at over 120 courses throughout the United States and Japan.
