Secondary turf equipment market facing growing pains

BY ANDREW OVERBECK

With the popularity of leasing turf equipment surging over the past five years, the market for used equipment has expanded as well. Industry insiders estimate that the used market now exceeds $90 million in annual sales and will continue to grow as more equipment comes off leases.

Sales figures, however, do not tell the whole story. The industry is still learning how to approach the secondary turf market. While high residuals make leasing packages more attractive, they make it more difficult for dealers and wholesale brokers to unload used equipment at a reasonable profit. In order for leases to grow, there

Chicago credit giant to finance golf

BY JAY FINEGAN

CHICAGO — A new source of capital has entered the golf industry, and this one comes with deep pockets.

Heller Financial, a $20-billion credit firm, recently established a golf lending group with plans to fill some of the void created when Bank of America abandoned the golf-financing field last fall.

Ironically, two of the key players in the new Heller golf brain trust have sailed in from Bank of America. Rick Nekoroski, who completed $275 million in golf course investments for Bank of America, will handle the eastern half of the country from Boston. And John Seeburger, a West Coast loan officer for B of A, will take charge of the action in the western United States from his office in Costa Mesa, Calif., south of Los Angeles. Both men will hold the title of vice president and investment officer.

Real estate specialist Christy Lockridge, an 11-year Heller veteran, has been named product manager for the golf lending group. She will direct the

Wolf Creek offers high drama in Nevada desert

BY DOUG SAUNDERS

MESQUITE, Nev.—The fairways of the recently opened Wolf Creek Golf Club pour through the stark desert terrain like green lava flowing through the landscape. Their stunning contrast against the multi-colored sandstone cliffs creates a spectacular setting that begs a golfer to come out and play in this high desert setting in southeastern Nevada.

Your first thoughts are: how could a

Drought-stricken N'west faces dry summer

BY JOEL JOYNER

SPOKANE, Wash.—The Northwest is confronting record-low water levels that may result in some severe shortages this summer. The drought also has potential serious implications for energy-starved California, which relies on hydroelectric power from the Northwest.

In March, Washington Gov. Gary Locke declared a drought emergency for the state. According to Scott Gudes, acting administrator of the National Oceanic and Atmospheric Administration (NOAA), the Northwest is the most drought-stricken region of the United States.
"The dog days of summer aren't so bad with Penn A-4. Just ask my sidekick Bogey."

"When the thermometer rises in July and August, Penn A-4 performs its best. Members can't believe how true and consistent these greens putt even in summer heat. They go out of their way to compliment me on these greens—which is great to hear from members who play worldwide.

"The best part is we don't have to beat our brains out to keep them that way. I treat all greens the same over the entire course, and the first green putts the same as the 18th. With weekly light topdressings, our greens putt consistently every day of the week. I've found that Penn A-4 withstands more foot traffic than other bents—a definite plus since half our rounds are played walking with caddies.

"Sometimes these greens surprise even me. Heck! Even Bogey knows there's something special about Penn A-4 creeping bent. During our hot, humid summer months, Penn A-4 makes work—and play—just that much better."

Dan Marco, CGCS, superintendent Country Club of Detroit

Penn A-4 is one of the Penn Pals™, which include Penncross, Penneagle, PennLinks, Penn A-1, Penn A-2, Penn G-1, Penn G-2, Penn G-6, Seaside II, Pennway blend, NuPenn blend, and PennTrio blend.
Bay Creek International has been close to nobody in the realm of environmental protection. Audubon treads lightly on the waterfront ecology of an area where the Chesapeake Bay meets the Atlantic Ocean. Bay Creek, a visually stunning property, will feature an Arnold Palmer-designed course, slated to open June 1. A Jack Nicklaus signature layout will come next, along with a 224-slip deep-water marina and an upscale residential community.

GOING BY THE RECIPE
The Palmer course, stretching to 7,244 yards, has set the pace as Bay Creek gun for “silver signature” status in the Audubon Cooperative Sanctuary Program (ACSP). The silver designation is reserved for landowners for whom Audubon International develops a natural resource management plan, geared mainly to water and wildlife issues.

Bay Creek project manager Tom Saunders said that going for the silver designation isn’t that tough, once you make the commitment. “You just go by the recipe they give you,” he said. “Audubon works with you pretty well. It’s expensive, but we felt this was the right way to go.”

BUILDING SPECIFICATIONS
“You start the process with Audubon as early as possible,” said Saunders, who joined with owner and developer Baymark Corporation almost three years ago. “For the gold signature program, they would have to be involved in the course design, but we didn’t get started early enough. Baymark had the plans from the Palmer Course Design Company before I even came on board.

The general contractor, had to pull off the actual design modifications to accommodate Audubon.”

CART PATHS OF CRUSHED SHELLS
For starters, Bay Creek planted more than 2,500 large trees and installed nesting boxes for waterfowl. In keeping with Audubon’s criteria, Landscapes Unlimited used natural materials, such as crushed shells, as permeable paving for cart paths that go near the water.

“Most of the requirements deal with water quality,” Saunders said. “You do a lot of additional planning and take additional measures with drainage from greens and bunkers to make sure everything gets filtered as many times as possible. So it kind of complicated part of the construction process, and it complicated the grassing process.”

Bay Creek Golf Club, opening June 1, sits at the intersection of Chesapeake Bay and the Atlantic Ocean.

Bay Creek Golf Links has taken the top spot in Golf Digest’s ranking of the 100 best golf courses, but for the whole Bay Creek development.”

12 HOLES ON THE WATER
The Palmer course is more than halfway to silver signature certification, and Saunders has few doubts about winning the designation. “When our course opens in June,” he said, “it will offer an extraordinary golf experience, including 18 challenging and exciting holes of golf and an unparalleled environment in which to play them.”

Number three is the signature hole, a 439-yard par-4 with three fairway bunkers and a 100-yard carry over water to a rock-walled green. A backdrop of tall, slender trees looms behind the green and separates the hole from the beach on the Chesapeake.

All told, four holes are on the Chesapeake, eight are on Old Plantation Creek, and several are framed by giant sand dunes. Both the Palmer and the Nicklaus courses will be semi-private, offering daily-fee play.

Pebble Beach unseats Pine Valley as #1

PEBBLE BEACH, Calif. — Pebble Beach Golf Links has taken the top spot in Golf Digest’s ranking of the 100 best golf courses in the country. This represents the first time that Pebble Beach has achieved the number-one ranking.

In this year’s rankings, Golf Digest noted that the recent addition of a new par-3 fifth hole (expanding the golf course to nine holes on the Pacific Ocean), improved course conditioning, and high scores in the area of tradition helped Pebble Beach surpass Pine Valley, which had held the top spot since 1985.

The top four awards in Golf Digest’s rankings for 2001 were, in order of ranking: Pebble Beach, Pine Valley, Augusta National and Cypress Point.

“We are very proud of the customer service initiatives we’ve introduced, especially our pace of play initiative where we have seen the average time for a round of golf drop from approximately five hours and 15 minutes to almost four hours and 35 minutes,” said Peter Ueberroth, co-chairman of the new ownership group that acquired Pebble Beach Company in 1999. Pebble Beach Resorts is comprised of three hotels: The Lodge at Pebble Beach, The Inn at Spanish Bay, and the newest addition, Casa Palermo; and four golf courses: Pebble Beach Golf Links, Spyglass Hill Golf Course, The Links at Spanish Bay, and Del Monte Golf Course; and the recently opened Spa at Pebble Beach.

Located 120 miles south of San Francisco, Pebble Beach is part of the famed Monterey Peninsula.

Nelson & Haworth crafting 700-yard holes on the edge of the Himalayas

LIJIANG, China — Size does matter. To compensate for the extreme altitude, Robin Nelson and Neil Haworth’s latest project in China, Jade Mountain Snow Dragon International Golf Course, will be 8,500 yards long. The course is situated at 10,000 feet elevation in the bottom of the valley of Shangri-La in Yunnan Province.

“The altitude has some interesting effects on the golf ball,” said Haworth. “It spins less — both side spin and back spin — and because the air is much thinner it travels much further.”

Nelson and Haworth designed the course in conjunction with China’s top pro golfer, Zhang Lian Wei. “During design and development we spent a couple of days on site with him hitting balls. He was flying the ball about 20 percent further on all shots, maybe slightly more on drives,” Haworth said.

As a result, Haworth designed the course longer. The longest par-5 is 735 yards, the longest par-4 is 525 yards and the longest par-3 is 270 yards.

BEGINNERS CAN PLAY, TOO
“However, we also realize that the average golfer does not get the same advantage as the pro, especially the beginning golfer who rolls the ball on the ground,” said Haworth. “Therefore the middle and forward tees play to the typical yardage that you would find at sea level.”

The gently rolling site has great views of the surrounding mountains and several holes play through a former “Tibetan Village” and 1,000-year-old pine forests. “The course takes advantage of the spectacular views as much as possible,” he said. “Since the scale of the site is huge, the scale of the features are also big and strong. The lines of the fairways are definitely without any busy shaping.”

CONSTRUCTION CHALLENGES
Fifteen holes at the course are shaped, and seedling recently began. The main
Booth, Faxon team up in Rhode Island

By ANDREW OVERBECK

MIDDLETOWN, R.I. — Golf course architect Brad Booth has joined forces with PGA Tour player Brad Faxon to design the West Course here at Newport National GC. The West Course will open for play in 2003 and join the Arthur Hills-designed East Course, which is currently under construction and due to open in 2002.

Newport National represents the first of what could be many projects designed by both Booth and Faxon.

"We have already talked about doing more stuff together," said Booth, whose design offices are based in Ogunquit, Maine. "Getting Faxon on board was a major marketing coup for developers Newport National Golf Club LLC, since he is a native of Rhode Island.

"He has some name cachet in New England," said Booth. "And it works out great because he comes back for a week every month, so he will be able to visit the site often."

Booth and Faxon's work on the West Course is just getting underway. Both are still feeling out their budding design relationship.

"I am doing the basic routing plans right now, and when Brad is back we sit down and spend a day or two going over that stuff," Booth said. "He is a neophyte on the design end, so this is a learning experience for him. But he has a wealth of information from playing..." Continued on page 6

Sea Marsh earns Audubon certification

By JOEL JOYNER

HILTON HEAD ISLAND, S.C. — The Sea Marsh Course, located here at the Sea Pines resort, has been certified by Audubon International as a member of the Audubon Cooperative Sanctuary System. It is the second course at the facility to be recognized for environmental protection.

According to Carol Thompson, staff ecologist at Audubon International, superintendent Jim Cregan and his two assistants - John Michnuk and Rich Fioretto - and Sea Pines EcoTour instructors Aaron Black and Carl Zies have gone above and beyond certification requirements. "They're doing a great job," said Thompson. "We require 80 percent of landscape plans to be native, and they've done 100 percent.

"Since joining the program, they've gone from buffering eight percent of their shorelines to 25 percent," she added. "That's a big improvement."

WILDLIFE IDENTIFIED

The Sea Pines Ocean Course, the first course built on the island, was the fifth course in the state to be Audubon certified. "We have a great public relations program running, and that's what the Audubon society is looking for," said Cregan. "Since the Ocean course was certified back in June of 1999, we've been trying to find new ideas to promote environmental awareness."

Wildlife throughout the resort was identified and labeled so that information could be provided to members and guests. "We're so blessed with an abundance of wildlife here," Cregan said. "There are about 20 species of birds that we see on a daily basis. We've built shelters for everything from purple martins and blue birds to bats and screeching owls."

The third course at the resort, Harbour Town, has taken its own steps toward Audubon certification on the heels of the annual PGA Tour's Workman Classic. "Our announcement has sparked a lot of interest in the area," said Cregan. "I've had at least five superintendents call me to find out how to get..." Continued on page 6

Children's Golf Foundation building facility for disabled kids

BY ANDREW OVERBECK

WEST PALM BEACH, Fla. — The Children's Golf Foundation is set to open the country's first golf learning facility built specifically for handicapped children. The $300,000 project marks the culmination of 12 years of hard work to construct a permanent facility for the program's activities.

"We needed a non-conventional facility to teach a conventional game," said Keith Stuhler, CEO of the foundation. "If you are physically challenged, golf is hard enough to learn. We are going to teach them in a relaxed, non-competitive environment, which is essential for our kids."

The foundation provides weekly golf lessons for more than 200 disabled children each week. "Golf is positive for them because it shows them that they can do something that they didn't think they could do," Stuhler said.

He estimates that there are 20,000 special education students in Palm Beach County alone that will be served by the new facility.

A SPECIAL DESIGN

The 15-acre facility was designed by Stuhler, a PGA professional, with handicapped needs in mind.

"We know what the kids are capable of," he said. "We left out the tees because of mobility issues. There are no impediments and most of the course is under a two degree slope."

The facility, which is being built on a former landfill, will include a 25,000-square-foot tee area, an 8,000-square-foot putting green and a 3,000-square-foot clubhouse. The driving range provides four holes of varying length.

"I designed a 15-yard hole that runs downhill so that if they even touch the ball they will have some positive reinforcement of hitting the green," Stuhler said.

In addition to the short hole, there is a 115-yard par-3, a 235-yard dogleg par-4, and a straight away 295-yard par-4. "We needed to have a two-shot hole to teach them that golf was not just about par-3s," he said.

DONATIONS MADE IT POSSIBLE

The project was made possible through the fundraising work of Stuhler and other donations and grants. Palm Beach County is leasing the foundation the land for one dollar a year and the USGA, the First Tee, the George S. May Foundation and Dorothy Campbell provided the primary funding for the project. The facility will be named Tam O'Shanter Golf and Learning Center as a tribute to George S. May who staged the 1950 World Open at the original Tam O'Shanter Golf Club in Niles, Ill.

In addition, the foundation has received a lot of support from the golf course industry. Jerry Pieman of Frontier Golf Construction built the course for a drastically reduced fee and Simmons & White donated civil engineering services. Haverland Nurseries, Hector Turf Co. and Mike Roach Irrigation have also contributed to the project. Bryan Plummer, superintendent at Ironhorse Country Club, is overseeing the grow-in of the facility and will assist in the day to day maintenance once Tam O'Shanter opens.

Construction is now wrapping up and Tam O'Shanter is due to start teaching handicapped children to play golf by the beginning of the summer.

with a Kentucky bluegrass blend on the fairways. Out of play areas will be re-established with native wildflowers.

**UNESCO SITE**

Lijiang has been recognized by the United Nations Educational, Scientific and Cultural Organization as a heritage site. The city, which is a 30-minute flight from Kunming, features architecture from another era with cobblestone streets and houses dating back several centuries. It is also the center for the Naxi Chinese minority, who number less than 250,000 and are the only remaining culture in the world still using pictograms as their form of writing.

The course is being constructed mainly with local labor and some local shapers. Haworth has Glen Nadal, their top shaper, on site to keep the course true to the design. The course will have Penn A1 bentgrass on the greens and Penncross on the tees.

Nelson, Haworth

Continued from page 3

challenge, according to Haworth, has been scheduling around the wet and dry seasons. "We have to follow a tight schedule because if we miss the seeding season for any of the holes, then the whole project will be delayed one year."

**Flagstick Caddie**

Transport Flagsticks the Fast, Easy and Damage-Free Way.

When transporting flagsticks, either preparing for a special outing, bringing them in at night or rotating cup placement with the red, white and blue flag system, Standard Golf can make the task faster and easier than ever.

- Flagstick Caddie holds up to 18 flagsticks, and our Junior model holds up to six flagsticks
- Cushioned foam slots hold flagsticks firmly in place, keeping them free of nicks, dings and other damage when transporting
- Vertical arm of the Caddie slips easily into the stake hole pocket of most golf utility vehicles
- Alternative brackets (not shown) are available for mounting on the side of vehicle boxes without stake holes
- Simple design allows for quick removal when not in use

Use the Flagstick Caddie to increase the life of your flagsticks and decrease the time it takes to change them. **Ask for Standard Golf.**

the ball rolling for their own courses.**

**600 ACRES PRESERVED**

The resort puts nature first. "We have 600 acres of wildlife preserve here," the superintendent said. "I've put together an environmental resource committee that includes environmental activists who have also jumped on board. We're trying to get as many people involved as possible and have received more positive feedback than we ever imagined possible when we first began with our Ocean Course five years ago."

The golf course abuts some private backyards, and Cregan has spruced up the borders. "The out of bound stakes were the only things that separated the two," he said. "Flower beds have now been added and native grasses also line the lagoons to provide natural corridors for birds.

"We've tried to increase the aesthetics of the course. Our flowers have attracted a lot of butterflies that have always held a fascination with our members and guest. We see a number of people that visit from places like Pennsylvania that have never seen a herring or an egret before in their life, let alone an alligator," said Cregan.

Booth, Faxon

Continued from page 4

courses across the world and has a good sense and feeling for design."

**Golf in the Vineyard**

The West Course at Newport National will be set on mildly rolling farmland with hedge breaks.

"The course has been given the moniker of the 'vineyards' because it is right next to Newport Vineyards," said Booth. "It will be an upscale resort-style course and will have open spaces. I will work within the topography of the site."

The course will feature wall-to-wall bentgrass. Construction is scheduled to start in 2002.

**Booth Staying Busy**

In addition to the work at Newport National, Booth is staying busy with projects across the United States and Canada. He is continuing renovation work at Samoset Resort Golf Course in Rockport, Maine; expanding and renovating a course for Orange County Parks and Recreation Department in New York; and working on a par-3 course at Apple Hill Golf Club in East Kingston, N.H.

Construction work is also due to start this year on a Booth design at Deep Brook Golf Club in Saco, Maine, and renovation should also begin soon at Intervale Country Club in Manchester, N.H.

Unfortunately, iron-rich Milorganite only improves the look of turfgrass.

Golfers haven't always been known for their fashion sense. But when it comes to golf courses, they have impeccable taste. Milorganite is rich in iron that is released naturally, giving your turfgrass a steady diet of usable iron nutrients over time. The result is a look that never goes out of style: a rich, plush green that golfers of all tastes prefer. For complete details, visit us at milorganite.com or call us at 1-800-287-9645.
CADDYSHACK III: the boys on the bag come back

The crusade to recruit a greater number of junior golfers is going strong. The First Tee and other programs around the country are steadily bringing more kids out to play. But there’s another way to encourage youngsters to take up the game, and it’s one that gets short shrift. I speak of caddies.

For decades, the caddyshack crew of high school and college kids was a golf course fixture. But motorized golf cars pretty much spelled doom for caddies, and with their demise, golf lost something important.

“We think caddying provides great mentoring for kids,” says Dave Norman, executive director of the Virginia State Golf Association (VSGA). “It’s an opportunity for kids to be with respectable people on the golf course. It gives them contacts in the community. Also, it helps them develop knowledge of the game and a love for it.”

THE ‘CORPS OF CADDIES’

That was definitely true in my case. The summer I was 14, my mom dropped me off every morning at a local country club. The caddyshack was ruled by a retired Army drill sergeant who called us his “corps of caddies.”

As a rookie, I knew nothing about the game. Consequently, I was purely a pack Klansman who called us his “corps of caddies.”

But caddies got to play the course on Mondays, and by that Labor Day I’d learned something about golf and was determined to stick with it. Indeed, this was a time-honored way of getting into the game. Some of golf’s greatest players – including Ben Hogan, Sam Snead and Byron Nelson – got their start in caddie yards.

Kids today don’t often get the same opportunity. Of the 285 courses in Dave Norman’s association, for example, only about 10 percent offer caddy programs.

SPEDDING UP THE PACE OF PLAY

But now there are signs of a resurgence. According to The Golf Insider, a travel newsletter, the best golf trend of 2000 was the return of the caddy. Numerous high-end resort courses now make caddies “inclusive” – their pay is included in the green fee.

Even some public courses, such as the new Lost Canyons complex near Los Angeles, require golfers to take caddies. When players ride, the forecaddies sprint out front to watch the shots land. Not only does it save on lost balls, it also speeds up the pace of play.

According to Mike Granuzzo, the demand for caddies has increased dramatically. He should know. As president of Caddie Master Enterprises, of Pinehurst, N.C., he provides “outsourced” caddy programs.

“Some of you have a lot of people who’ve made a lot of money in the last few years who are building private clubs,” Granuzzo says. “They want the best high-end golf experience, and caddies are synonymous with that.”

Some of Caddie Master’s client courses have 150 to 300 caddies, including lawyers, doctors, accountants, military personnel, college students and teachers. “It comes down to a love of the game,” says Granuzzo. “It’s good physical exercise and in most cases you get playing privileges.”

A TANGIBLE ADVANTAGE

“From the standpoint of the escalating price of golf,” Granuzzo adds, “these high-end clubs are being challenged to add value while they add rate. Some of these courses are next door to each other, and they’re all seeking a competitive advantage. They want something that can’t easily be duplicated, so they’re turning to personal service. And the only vehicle left out there is a caddy program.

“From a positioning standpoint, it’s fantastic,” he adds. “With a caddie providing local knowledge on a tough course, you can save a lot of balls and as much as an hour.”

START, GROW, SLOW

After eight years at the helm of Caddie Master, Granuzzo now knows that “you have a lot of people who’ve made a lot of money in the last few years who are...
WIGA proposes course accessibility policy for impaired

BY ANDREW OVERBECK

LOS ALTOS, Calif. — In an effort to reduce the increasing abuse of the current medical or “red flag” system used by golf courses to identify disabled golfers, the Walking Impaired Golfer’s Association of America (WIGA) is proposing a new set of rules that would better identify those with walking impairments.

WIGA decided that a rule change was in order after its 2000 study showed that 81 percent of golf courses surveyed said that they needed a system to identify golfers with walking impairments. (See chart) “The red-flag system was discriminatory against the golfer with walking impairments,” said Fred Montgomery, chairman of WIGA.

“Those using the red flag could be someone who is lazy or has a sore back. There was a lot of abuse of the system and the number of requests appeared to be out of control. People with walking impairments need to have certain rules that apply specifically to them so they don’t get lumped into one category.”

SEEN RED AND BLUE

The new rules introduced by WIGA would create a two-tiered system of red and blue flags as well as rules governing the use of adaptive golf carts.

The red flag would represent golfers with moderate walking impairments who can walk a minimum of 50 yards and comply with course rules applicable to red flag use. A red-flagged cart would be able to drive to the ball in the fairway (turf conditions permitting) using the 90-degree rule. The cart will be allowed to drive any area of the golf course, accessible bunkers and putting surfaces. According to Montgomery, golf courses should expect golfers with walking impairments to complete their rounds in a similar time to the times of able-bodied golfers.

FORMALIZING THE RULES

WIGA, which follows golf course accessibility surveys for golf courses in terms of ADA requirements, has already introduced the two flag system at all four courses at Pebble Beach.

Montgomery also presented his proposal at the National Forum for Accessible Golf at Clemson University in April and hopes that this will be the first step to the nationwide implementation of the new rules. “I have been inundated with requests for information,” he said. “Course operators and superintendents are looking for a solution that reduces the abuse of the red-flag system while providing for the needs of walking impaired golfers.”

GOLF COURSE ACCESSIBILITY STUDY

• NEED A SYSTEM TO IDENTIFY GOLVERS WITH WALKING IMPAIRMENTS:
  DEFINITELY YES - 81 PERCENT
  DON'T REALLY KNOW - 19 PERCENT

• UNDERSTAND THAT "TOTAL ACCESS" INCLUDES GREENS:
  YES - 38 PERCENT
  NO - 61.9 PERCENT

Source: 2000 WIGA survey

MAILBAG

IS PURGATORY LONGEST COURSE?

Dear Golf Course News,

I read each issue with interest and pleasure, as I find your coverage to be the broadest in the industry. I did, however, stop short when I arrived at the story about Purgatory Golf Club, which characterized it as "the longest course east of the Mississippi." I believe the International, in Boston, Mass., holds that distinction at 8,325 yards from the back tees. Of course, its par is 77 from that set of tees. The next set measures 7,200 to 7,300. Since you didn’t mention the par at Purgatory, I may well be splitting hairs, but I didn’t want our New England course to go unrecognized.

Sincerely,

Arthur Little
Proprietor, Province Lake GC
South Effingham, N.H.

BOYS ON THE BAG

pro shop.”

As those five caddies improve and word spreads, so does demand. “Don’t overreact,” Granuzzo cautions. “Instead of five, maybe you need six or seven. Just add one or two at a time. If you recruit 10 and only have demand for six, you’ve got to split up the work too much. You dilute the talent pool.”

“That makes the customer experience worse, which negates demand,” he adds. “It’s a negative vortex, and you end up losing everybody. But when you start slow and grow slow, you’ll be able to figure out what kind of program your club can support.”

CADDIE STARTING TIMES

Dave Norman adds another bit of wisdom. He plans to launch a caddie training program next summer at Independence Golf Club, a VSGA-owned complex in Richmond. It will focus on youths age 14 to 21.

Norman knows the major pitfalls of caddie programs. “When caddies sit around all day and never get a loop, they get disillusioned,” he says. “We propose to tackle that by having caddie starting times. If you book during those times, you’ll have to take a caddie.”

“We’d run those between 8 a.m. and 9 a.m. and between 1:30 p.m. and 2:30 p.m. on weekends. The caddies could go out twice,” he explains. “With a system like that, they know they’ll get a bag. We’ll also provide forecaddies if the players prefer to ride.”

Norman hopes to make his caddie training program a statewide resource. “We want to offer caddies at our member clubs,” he says, “because we feel it’s an integral part of the game. It helps the local employment scene. And it’s a great way to get kids involved in golf.”

Hiring

Continued from previous page

judge whether an individual is dependable, hard working, flexible and service-oriented. Most clients use that and, in addition, some also use our “honesty test.” However, I don’t see honesty as an issue for most golf course maintenance employees.

Another very good way to screen out people, and save yourself a lot of time and trouble, is to ask that person to meet you at 5 a.m. at the cart barn, or wherever the superintendent’s office is located. Emphasize that if the job candidate is one minute late, you are not going to hire him.

That way, you will quickly find out those who can get up early enough to come to work at 5 a.m., and how much they want that job. That, in addition to checking references, and using good, validated legal tests to determine other characteristics that are important to you, would substantially reduce the high turnover that golf course superintendents have been having over the years.

Harris (Hank) Plothin is the author of "Building A Winning Team," and creator of the "Above and Beyond" customer-service training program designed exclusively for the club industry. He is the founder of The Plothin Group, a 33-year-old management consulting and training firm.

MAY 2001
For those who think their fairways can never be too clean, we submit our B Series Lightweight Fairway Mowers and our Fairway Tender Conditioners (FTCs). Just by putting FTCs on our 3215B, 3235B, or our new 3225B, you'll discover what clean really means. Grass stands up for an even, clean cut and a true playing surface. And the rear roller power brush finishes the job up right by removing built-up material as well as dispersing any leftover clippings. You'll also find an improved yoke and ball joints for better grass collecting; and an electric fan drive for improved noise levels and engine cooling. Call your local John Deere Golf & Turf Distributor or 1-800-537-8233 for a demonstration. Nothing Runs Like a Deere®
Brutal winter leaves major mess for Northeast superintendents

By JOEL JOYNER

WESTON, Mass. — A winter that came in like a lion and left like a lion has left behind a major mess for superintendents in the Northeast.

“IT was a cold, cold, cold winter, a big departure from the weather experienced the past two seasons,” said USGA agronomist Darin Bevard. “Winterkill probably is the biggest issue right now.”

Wet, heavy accumulations of snow, well above average in most places, now bring flood worries. The concerns of snowmelt flooding have focused on areas in southern Maine, all of Vermont, New Hampshire, Massachusetts, Connecticut, parts of New York state along Lake Champlain and the Hudson River, northern New Jersey and northeastern Pennsylvania, according to the National Weather Service.

Moreover, prolonged ice on greens — for 60 days or more — has left courses in grim shape for the season opening.

“We’ve had severe ice build up this year,” said superintendent Jeff Corcoran here at the Weston Golf Club. “We’ve had at least five to six inches of ice covering all of our greens. There’s no question about turf damage.”

A GUESS AND A GAMBLE

When gambling with Mother Nature, sometimes there’s no escaping injury. “It’s a matter of which of the two evils do you want,” Corcoran said. “Do you want ice encasement with oxygen deprivation to the plant, or do you remove it and deal with crown hydration? We decided to leave the ice on until there was a steady thaw. We were in a damned if you do, damned if you don’t situation. Ice is a real big pain.”

Career moves: superintendents weigh merits of ‘three-year rule’

By JOEL JOYNER

FORT WASHINGTON, Pa. — In their quest for more prestigious golf courses, better working conditions and fatter paychecks, many superintendents follow the unofficial but compelling “three-year rule.” Under this principle, they jump ship and switch to a fancier course every three years or so — at least until they find the perfect job.

Does the “rule” make sense in today’s job market? Do loyalty or lasting relationships count for anything? Does job-hopping your way through a career look good on a resume? And finally, is money the only motivator?

Money is not the primary key for Sam Hocutt, one of many superintendents we called to get their take on the three-year itch. Earlier in his career, he was a true believer in frequent moves.

ENDURING THE LONG HAUL

“Three-year rule is mostly due to boredom,” said Hocutt, now superintendent at the Pawleys Plantation Golf Course on Pawleys Island, S.C. “You can get a course in great shape without a hassle in that time. After that, the job seems too routine. It’s not the challenge it used to be.”

Hocutt is in his eighth year at the island course, after working three-year stints at Oyster Bay in Calahash, N.C., Carolina Pines in Havelock, N.C., and the Hampton Club on St. Simons Island, Ga.

“When building a course, the boredom starts at or about the three-year point. I feel during this period superintendents are at peak performance,” he said. “Then they want to go build another one just for the challenge.”

Family responsibilities can dampen the urge to move, especially if it means uprooting kids from schools and friends, but they don’t kill the drive for a better job. “There aren’t many superintendents who can endure the long haul,” Hocutt maintains. “As the course ages, so does the irrigation, equipment, labor, budget, members, and then yourself. It becomes tougher the longer you stay in one place.”

Out of 100 courses on Pawleys Island, Hocutt knows of only four superintendents who’ve lasted at one place more than 10 years. “Three years is a safe bet,” he said. “It’s also a good step up to increase your salary.”

FINDING A HOME

Vincent Hankley, the 12-year veteran superintendent at the Weston Golf Club. “We’ve had at least five to six inches of ice covering all of our greens. There’s no question about turf damage.”

Huesgen and Flynn take top jobs at Pebble Beach

PEBBLE BEACH, Calif. — Tom Huesgen has been named head superintendent at the hallowed Pebble Beach Golf Links here on the California coast. He replaces Erik Gresytok, who has moved on to Winged Foot Golf Club, in Mamaroneck, N.Y.

At the same time, Chris Flynn has assumed the head superintendent position at Spanish Bay Golf Club, also a Pebble Beach Co. course.

Both moves reflect the company’s long tradition of promoting from within.

A graduate of Oregon State, with a degree in turfgrass management, Huesgen transferred in from Spanish Bay, where he had been superintendent since 1998. He is a member of the Golf Course Superintendents Association of America as well as the Northern California Golf Course Superintendents Association.

“Tom is familiar with all of Pebble Beach Company’s golf properties and is a talented and experienced superintendent,” said Paul Spengler, senior vice president of golf properties. “We’re confident in his ability to maintain the integrity and quality that make Pebble Beach Golf Links one of the most famous courses in the world.”

STARTED AS SPRAY TECHNICIAN

Chris Flynn, most recently assistant superintendent at Spyglass Hill Golf Club, has been with the Pebble Beach Co. since 1998. He was first employed as a spray technician at Spyglass and then promoted to assistant superintendent last August. He holds a degree in turfgrass management from the State University of New York at Cobleskill.

Earlier in his career, Flynn worked at the TPC Course at Las Colinas, in Dallas, Texas; at the Mhapat Golf Course, Westchester Country Club and Brae Burn Country Club, all in New York.

“Chris has done a great job as assistant superintendent of Spyglass Hill and is ready to take on more responsibilities at Spanish Bay,” said RJ Harper, vice president of golf operations for the Pebble Beach organization. “As with Tom Huesgen’s promotion, we’re delighted to have within our ranks the types of employees who can step right into leadership positions at our world-class golf courses.”
PARAMUS, N.J. — Superintendent Todd Raisch hopes to be at the top of his game when the 2001 Senior PGA Championship arrives here at Ridgewood Country Club this month.

The championship will be played over a composite course using select holes from all three nines: Center, West and East courses. The layout, which can be stretched to 7,150 yards, will play at 6,904 yards for the event.

"We'll feature the sixth hole from the Center course, a short but devilish hole of 275 yards with a 1,700-square-foot green," said Raisch. "It was recently ranked by Golf magazine as one of the Top 500 holes in the World."

The 1929 A.W. Tillinghast-designed layout has fairways lined by 100-year-old oaks. "This is by far our biggest maintenance project," the superintendent said, "but rather an ongoing perpetual maintenance project to increase the size of our tees. We're currently in the design phase of a master plan with architect Gil Hanse."

A Memorial Day fire sparked by a cart charger back in 1997 has lead to the construction of two new maintenance buildings. "We now have a 6,000-square-foot equipment storage facility and a new 4,200-square-foot employee/administration building complete with bedrooms for student interns," said Raisch.

The superintendent is building toward peak conditions for the championship. "You would be hard pressed to find a better week on the calendar to have a major championship in northern New Jersey," Raisch said. "The one downside is that we will still have to be in the window of opportunities for poa annua to seed, albeit near the end. It will be critical for us to nail the timing of the Embark applications."

MAY 2001

Northwest drought

Continued from page 1

NOAA acknowledged that a jet stream pattern, termed the "Omega block," formed a barrier last December that diverted Pacific rain and snow storms from the Northwest to California and Canada. "They're talking about the drought situation all over the West Coast," said Michael Barber, superintendent here at the Hangman Valley Golf Club.

"Usually we'd get rain down here in the lowlands and the mountains would bulk up on snow in the winter, but that never happened this year. I've heard the snow pack is only 50 percent of what it should be in the mountains."

'CROSS YOUR FINGERS'

"If worse comes to worst, we could be in big trouble," Barber said. "It's a cross your fingers and hope that you make it through the summer situation because, obviously, there is no quick fix. We irrigate the course with surface water from Hangman Creek, and we don't have an alternative water source available here."

Typically, the Northwest helps California keep the air conditioners running in the summer. This year, however, soaring energy rates and lack of precipitation may leave the entire West Coast high and dry. Mother Nature would need to deliver precipitation in biblical proportions to help the region recover from the drought.

"They're forecasting a wetter-than-normal spring," said Sean Hoolehan, superintendent at the Wildhorse Resort Golf Club in Pendleton, Ore. "But the drought forecasters claim that it would take at least 200 percent of our normal expected rainfall during the months of March, April, May and June to get us back to normal levels."

SALMON OR HOT TUBS?

Reservoirs are hitting record-low marks as California's population and energy consumption climbs.

"There's no question that our reservoirs are all extremely low," Hoolehan said. "I drove to Portland recently, and I've seen water levels this spring lower than what I've seen in summers past. I work in the high desert, and we get all of our rain from October to April," said Hoolehan. "We still get some rain after April, but the amounts diminish substantially."

What will be the rippling effects of this drought as summer activities approach? "I'm not sure to what extent it will effect the energy crunch in California," said Hoolehan, "but we have our own issues surrounding our hydroelectric output regarding fish and the salmon."

Spilling water over dams to generate power is likely to jeopardize stocks of chum salmon and steelhead that migrate to the ocean in the spring and summer. The chum salmon is listed as threatened under the Endangered Species Act. "We can't afford to wipe out fish stocks just to keep California out of the dark," Hoolehan said. "That's what the governments and the tribes and the Northwest Sports Management...at Todd Raisch's Ridgewood CC

NORTHBROOK, Ill. — Tom Prichard has been named superintendent of The Glen Club, an 18-hole layout in Glenview, Ill., being designed by golf architect Tom Fazio. The course is scheduled to open in July.

Prichard, who has been with KemperSports Management since 1991, has been managing the championship event at The Glen Club since last August.

"Tom has an outstanding track record with our organization and is accomplished in all areas of turfgrass maintenance and management," said Steve Lesnik, KemperSports CEO.

Two years after joining the company, Prichard was named superintendent for two of KemperSports' Chicago-area facilities, Royal Melbourne, the Greg Norman-designed private club in Long Grove, and the nine-hole Vernon Hills Golf Course.

In 1998 he assumed additional responsibilities for the company's agronomist-providing consulting services to other KemperSports properties in the Midwest and West.

Before coming aboard at KemperSports, Prichard served as superintendent at Lakewood Golf Club and Woodstock Country Club, both in Illinois, and as assistant superintendent at Big Foot Country Club in Fontana, Wisc. He is a Class A member of the Golf Course Superintendents Association of America.
MAINTENANCE

Quarry Hills calls globetrotting Kessener back to his roots

QUINCY, Mass. — After roaming the globe building golf courses most of his life, Massachusetts native Gary Kessener, 42, has returned home to oversee construction of one of the most ambitious golf projects ever undertaken in the United States — Quarry Hills Golf Course.

"It's a fascinating project," said Kessener of the 27-hole John Sanford-designed layout being built over three former landfills, a few miles from downtown Boston. "It's great to be able to do something like this where I grew up."

Quarry Hills developers Chick Gellich and Bill O'Connell reviewed more than 50 resumes and interviewed a half-dozen applicants before selecting Kessener. "We needed someone who had extensive grow-in and building experience," Gellich said. "Gary fit the bill. He's built 30 or more courses and started out running a bulldozer and planting trees by hand. He's been all over the world but grew up in New England, so he also understood the peculiarities of our weather and conditions."

GENESIS OF QUARRY PROJECT

Gellich and O'Connell first approached Quincy Mayor James Sheets in 1991 with the idea of building a golf course, to close its landfill, which bordered the Quincy property. Abandoned quarries, wetlands and historical sites also had to be dealt with. The developers accumulated a 540-acre parcel that included three landfills and some private property.

12 MILLION TONS OF FILL

This led to a public-private partnership with the Massachusetts Highway Department's Central Artery Group, calling for delivery of more than 12 million tons of excavate (as many as 1,200 truckloads daily) from the "Big Dig," a gigantic highway and tunnel project designed to improve traffic flow through Boston.

Trucks have delivered more than 800,000 loads of excavate to the site, with the material used to sculpt the course, learning center and athletic fields. The tipping fees paid by the state for the Big Dig excavate are helping to pay for the project, expected to open in 2002.

The course is located on high ground just seven miles from downtown Boston. It overlooks the entire city to the north, Boston Harbor and the islands to the east, and the 30,000-acre Blue Hills Reservation wilderness park to the west and south. Roughly 360 townhouse apartments and a hotel/conference center also are planned.

GLOBAL EXPERIENCE

Golf construction has been part of Kessener's life since his early teens. He spent summers in California, where he helped build greens on a course near his summer home. He graduated from high school in 1978 and went to work for his brother-in-law, who had a landscape business in California.

Kessener also worked on several courses, including Carmel Mountain Ranch in Temecula and Desert Falls Country Club in Palm Springs. He helped install Toro's first VT-1 irrigation system at Bixby Village in Long Beach.

He later worked as project supervisor for golf architects David Rainville, Ronald Fream and Greg Norman during the early leg work and overseeing construction projects in Japan, Taiwan, Korea, Thailand, Malaysia, Indonesia, Argentina, France, Portugal and Tunisia. He even started his own firm, Golf Planning Management Construction Services, located in Kota Kinabalu, Malaysia.

LANDING THE JOB

Kessener kept in touch with his roots, flying back to Cape Cod yearly to visit relatives. Two years ago he noticed a sign announcing the Quarry Hills project. He later saw an ad seeking a superintendent for the project, contacted Gellich and was hired in November 1999.

Kessener believes the developers hired him based on his extensive construction experience. "Many of the Asian projects I was involved with were on an even larger scale than this one," he said. "It didn't overwhelm me. My ability to see light at the end of the tunnel helped me land this job."

WAITING FOR SNOW TO MELT

Kessener estimated 95 percent of the 12 million tons of fill material from the Big Dig was on site as of late December. At that time, 1.5 million cubic yards of material were stockpiled under the snow waiting to be brought daily.

Snow has occasionally slowed progress. When that happens, workers have redirected their efforts to filling in one of several quarries. Between 300 and 500 trucks continue to bring fill daily.

SUPERINTENDENT IN THE SPOTLIGHT

Gary Kessener, superintendent of the Quarry Hills course, with the Boston skyline just visible in the distance

'Manufactured' topsoil solving many problems at Quarry Hills GC

QUINCY, Mass. — With native topsoil both expensive and scarce, Quarry Hills is manufacturing its own topsoil to cover much of the 27-hole John Sanford-designed course under construction in suburban Boston.

Manufacturing its own topsoil? That's right.

Working with Falmouth, Maine-based New England Organics, Quarry Hills is mixing sand, organic pellets and short paper fibers (SPFs) — recovered paper fibers generated by paper mills — to produce a high-quality loam that is erosion-resistant, weed-free, water-retentive and about 40 percent less expensive than native topsoil, according to superintendent Gary Kessener.

Quarry Hills is covering three landfills with manufactured topsoil solving many problems at Quarry Hills GC

Selecting a bentgrass cultivar for greens takes research

By KEVIN ROSS

When Penncross bentgrass first became available in 1956, little did anyone know the standard this grass would set for more than 40 years. Penncross is still the best-selling bentgrass in the world — more than a million pounds are sold annually worldwide — but slowly things are changing.

Today's bentgrass market has more than 30 to choose from. With so many cultivars the question arises: which one should you choose?

A good starting point is the National Turfgrass Evaluation Program, or NTEP. Throughout the United States, turf trials are set up at various universities. These bents are evaluated and results are compiled and published.

What does this data tell you? Should you just select what's rated number one? No, this data is merely a starting point. Maintenance practices are different at each NTEP site, so it is important to know a few of the vital inputs, such as mowing heights, topdressing frequency, cultural practices, fertilization amounts and watering.

RESEARCH ON THE INTERNET

At the NTEP Web site (www.ntep.org), you can dig into data that will help you to see if a bent is suited for your region. The best way to look at bents that may perform for your conditions is to compare test sites that match your situation. This gives a better idea of its performance related to your conditions.

Also, on the Web site, you can compare how bents will...
Winter's mess
Continued from page 11

Corcoran, new to the club, has had a rough initiation. "Last year, members were playing golf the first week of March here. We'll be hard pressed to open at the end of April," he said. "It's been a hell of a starting year. Mother Nature has given me a pretty nasty welcome."

Old Man Winter also has taken his toll on maintenance budgets. "Most of my guys are putting in 20 hours of overtime each week to get the course back on track," Corcoran said. "Add on equipment rentals to clear snow and ice, and you have a big impact on the budget."

An exhausting recovery
Construction projects also have suffered from the harsh season. "It's horrible," said Paul B. Latshaw, superintendent at the Oak Hill Country Club in Rochester, N.Y. "We're in the middle of a $3.1-million dollar restoration project that includes the installation of a new irrigation system. If you're trying to do construction, this past winter has been absolutely brutal. We were well above 100 inches of snow here when we usually average about 93 inches. Then, in the middle of winter, we had thaws that would only freeze up again and again."

The construction project is in preparation for the 2003 PGA Championship tournament to be held at the Oak Hill facility. "We started construction this past September, when Landscapes Unlimited pulled in," said Latshaw. "Unfortunately, we went into spring this year with at least eight inches of snow cover."

Winterkill worries are less pressing for the superintendent than snow mold this season. "Early spring, we only saw grass on the greens for half a day at tops. Then we'd be hit with six more inches of snow. My big concern is snow mold. We had protection down, but we weren't able to re-apply a mid-to-late winter application to get us over the hump. I know we have a lot of pink and gray snow mold in our roughs."

It will take a long and exhausting recovery effort to get the ball rolling again at Oak Hill. "Being snow covered for so long, we're going to have a lot of damage to the turf," Latshaw said. "Combined with the construction project, it's going to be like you can't imagine."

Superintendent John Zimmer, Jr., at the Oakmont Country Club in Oakmont, Pa., has also battled wicked weather undertaking the installation of a new irrigation system on the course. The course started the project on Oct. 20 last year and he hopes to be completed by the first of June. "It's been a terrible winter that has not cooperated at all," Zimmer said. "We had to run snow blowers most of the winter just to keep working."

Solution to the problem
Latshaw's father, Paul R. Latshaw, the superintendent at the Winged Foot Golf Club in Mamaroneck, N.Y., also knows the discouraging results of this past Northeast season. "The snow's off the ground," he said, "but it's like a mud hole here. Compared to last year, we're way behind to the start of the season. We've had a very severe winter."

The elder Latshaw, however, believes he has stumbled upon the solution to this havoc-wreaking weather. "This is only my second season here, and I've had enough of the winter in the Northeast. I'm retiring this year," he said, "and as I told my wife at the retirement party, I'm going to do some consulting work and stick south of the Mason-Dixon Line."

Deere sponsors GCSAA image campaign
LAWRENCE, Kan. — John Deere Golf & Turf Products will sponsor the GCSAA's image campaign for 2001, featuring superintendents showcasing their balancing of "science and art." The GCSAA is running a 30-second commercial on the Golf Channel through September. The spot shows a maintenance crew performing routine turf practices around a golf course while singing "Oh, What a Beautiful Morning" from the musical "Oklahoma." The ad will also be shown during The Masters, The U.S. Open Championship, the John Deere Classic and the Ryder Cup.
Three-year rule

Continued from page 11

confidence with the people you work with.

"Long term, you'll have more loyalty from your employer," Hankley added. "There are always times when things don't work out as you've planned, and you need a little loyalty from a long-time employer who has the ability to hang in there with you."

There's something to be said for moving up a little bit to a bigger operating course or paycheck when the opportunity presents itself, but I think everybody should be settling in and trying to find a home," he added. "In my opinion, that's the key. You need to have a long-term goal - to find a home."

Building relationships

If there's a middle ground in this debate, Douglass Larson, thinks he's found it.

"I like to think of it as the three-year rule," said Larson, superintendent at the Manufacturers' Golf and Country Club here in Pennsylvania. In a previous incarnation, he logged five years at the Riverton Country Club in New Jersey. "The advantages to moving," he said, "are the possibly major increases in salary, the new experiences to broaden your knowledge, and the ability to get your name and reputation around."

But Larson also points out the drawbacks of rootlessly roaming through a career. "If you're always waiting for that new opportunity, you never develop a relationship with a club and its membership because they're always waiting for you to fly the coop," he said. "You don't get the stability of family life. And it may also show little job stability to future employers. Then you have the uncertainty of a new club. You have to figure out the philosophy, membership and politics. In your current position, you know all that."

Vanishing job security

Relationships between employers and employees also play a critical role in job turnover.

"There is quite a bit of movement in our industry, and I think a significant amount of that movement is precipitated by employers in the way they treat the superintendent and compensate them with pay and benefits," said Tommy Witt, the new president of the Golf Course Superintendents Association of America.

Employers may value superintendents, he said, but rarely do they adequately pay them. "Superintendents are looking for that job out there that will compensate them fairly, where they will be viewed as a valuable and contributing member of the team, and where they'll have a solid relationship with their employer," said Witt, now in his first year as superintendent of the Kiawah Island Golf Club on John's Island, S.C.

In an unstable job market, there's usually a driving force or natural instinct to remain mobile. "I don't think there is such an animal as guaranteed job security anymore - not in the golf business, not in the magazine business and certainly not in corporate America these days," said Witt. "Superintendents often have to change jobs to get to the type of course they want to be at - movement is part of the equation," he said. "You're meeting new people, so you're increasing your visibility and networking ability."

Seeking a better situation

Before arriving at the Kiawah Island course, Witt started his career by climbing the superintendent ladder: five years at the Bent Tree Country Club in Dallas, Texas; followed by four years at the Wynstone Golf Club in North Barrington, Ill.; and then three years at the StillWaters Resort in Dadeville, Ala.

"People aren't moving just to be moving," Witt said. "They're trying to find a better situation for themselves."

"The bottom line," he added, "is that superintendents are looking for greater compensation and improved relationships."
Kessener
Continued from page 13

McCourt Construction Co. is placing the fill. Course construction is underway, but will begin in earnest this summer with Country Golf Inc. of Michigan, the course builder. Plans call for grassing to begin this fall. If all goes as planned, Quarry Hills will have at least nine holes open for play in 2002.

JUGGLING MANY BALLS

Kessener's extensive experience and his temperament are the main strengths he brings to the job, according to Geilich. "He fits in well and is liked and respected by the community," the developer said. "There is nothing he hasn’t seen before."

Another helpful quality is Kessener's ability to deal with a diverse group of engineers, architects, contractors and government officials to bring such a complicated project to fruition. "I work with them to adapt their designs - bridges, overflow structures and so on," he said. "Bringing them all together is the challenge."

Kessener faces hurdles and challenges every day. "It gets frustrating for Gary and everyone else," Geilich said. "So many things are out of our control. We don't know when the fill is coming from the Big Dig. We don't know if the material will be usable until we test it. If it isn't usable, we have to move it off site. If we can use it, but don't need it at that particular moment, then we have to store it somewhere."

"And this is all before we can even start building the golf course," Geilich added. "Then you have the dirt contractor getting in the way of the golf course contractor. There are constant disagreements about whose responsibility it is to move certain materials. Gary has been in the middle of all that and maintained the peace."

Working with unionized labor also has been trying, especially for a man used to hopping on a bulldozer, picking up a shovel or unloading a truck himself. Union rules forbid Kessener from doing anything except suggesting how others might do something. "That’s frustrating," he said. "Very frustrating."

TROUBLESHOOTER

Kessener called Sanford's design a very creative layout. "John and I work together on a regular basis to fine-tune things," he said. "I rely on him as much for his design knowledge as he relies on me to be his eyes here on a daily basis. I’m a trouble-shooter."

Despite all he's seen and experienced, the complexity of Quarry Hills still occasionally surprises Kessener. "Things don't happen overnight, especially when you are dealing with regulatory agencies," he said. "We have to deal with officials and consultants from the towns of Quincy and Milton, the Commonwealth of Massachusetts and the federal government, as well as our own consultants and engineers."

"Then there are agencies that don't normally become involved in course construction, like the Massachusetts Highway Authority and various historical conservation committees. It's definitely double or even triple duty."

YOU CAN GO HOME AGAIN

Kessener saw Quarry Hills as an opportunity for his family, which includes his Thai wife and seven-year-old son, to return home and settle down. His willingness to stay on at Quarry Hills once play begins was another factor in his hiring.

"It's important that the person who is there while the irrigation and drainage are installed stays with the project once it opens," Geilich said. "If that person has to run it, he'll make sure they are installed correctly and won't take any shortcuts."

"That goes for the whole course," he said. "The person who builds it will make sure it's done right if he also has to maintain it."

Kessener speaks bits and pieces of five different languages - Thai, French, Spanish, Malay and Japanese.

"I can speak enough to get by," he said. "If you're in somebody else's house, you have to do things their way."

Now, Kessener is back in his own house.
moisture and increases nutrient-holding capacity. Additionally, because it is a mixture of sand and tree fibers, the manufactured soil is weed-free, unlike traditional loam.

But one of the biggest advantages, particularly on a steep side like Quarry Hills, is the ability of the paper fibers to stand up to heavy rains that would normally wash away large amounts of topsoil and seed. The manufactured soil even outperforms erosion-control blankets often placed over newly seeded areas, Kessener said. A half-acre test slope planted at Quarry Hills has remained lush and weed-free, while a neighboring slope covered with regular topsoil has been eroded and dominated by weeds.

"This material could save builders a lot of money," the Quarry Hills superintendent said. "The top six inches become almost sponge-like, absorbing and holding water. If you put it in unirrigated areas that's a big benefit."

**SEED GERMINATION QUALITIES**

In addition to its application on Quarry Hills' dramatic side slopes, BioMix will be used in the fairways. Kessener is spreading roughly 1.5 inches of the manufactured soil over the 10 inches of existing fairway soil and then rototilling it down to a depth of six inches. The only place BioMix won't be used is on greens and tees.

The manufactured soil costs $5 to $6 per yard, about 40 percent less than the $10 to $15 per yard for traditional loam. And it is mixed on site.

"It's quite incredible," said Quarry Hills developer Chick Geilich. "We've done a lot of experimenting with this material and have come up with a mixture that works quite well."

Grass seed germinates more slowly in the BioMix soil than in traditional soil, lagging behind by three to seven days, according to New England Organics business development specialist Pat Ellis. But it catches up within several weeks. And the erosion resistance of BioMix means far more grass seeds eventually germinate than with traditional loam, he added.

**PROXIMITY TO SOURCE CRITICAL**

Transportation is the major cost. "Trucking anything a long distance can kill you financially," Sanford said. "To be cost effective you have to be within a reasonable distance of a paper mill."

Paper companies are abundant throughout most of New England, New York, Michigan, Wisconsin, Alabama and the Pacific Northwest, making manufactured soil a potential product for those areas.

At Quarry Hills, Kessener is using 80,000 cubic yards of BioMix on the side slopes and 22,500 yards on the fairways. Ellis estimates New England Organics could provide 200,000 to 400,000 yards of material annually.

**Bentgrass**

Perform in your area. For example, if your biggest disease problem is dollar spot, then the ratings for dollar spot injury may be one of your top concerns. Should it be your only concern? Definitely not. Selecting bents based on one or two categories is a mistake. Look at all the categories, but give less weight to something that doesn't bear directly on you.

For example, when I selected Penn A-4 in 1996 to use in resurfacing the greens at Country Club of the Rockies, some performance characteristics were largely irrelevant. Having very little disease pressure, I wasn't concerned about disease resistance. I was more interested in its drought performance, due to our extremely arid summer conditions; and winter survival, due to our intense winter season.

**COOL AND WARM SEASON TESTS**

Other information now available is the research being conducted jointly by the USGA.
**N'west drought**

continued from page 12

power utilities are attempting to work out now, to make sure that all needs are balanced and maintained as much as possible. "It's not fair to us in the Northwest, when somebody wanting to turn on a hot tub in California does it without fear of paying increased costs," said Rep. Jennifer Dunn, R-Wash.

**DOMINO EFFECT**

As golf course superintendents in the Northwest fire up their irrigation systems full steam for the peak summer season, California superintendents are awaiting to see how their own operations will fare this season. The Bush administration has rejected the idea of placing price controls on wholesale electricity sold to western states. "As far as Bush saying that California can take care of their own problems, well, we can," said Ken Schwark, superintendent at the Roddy Ranch Golf Club in Antioch, Calif. "We have the money. But the thing is, people need to realize that if California goes under because of this energy crisis, so goes the rest of the nation." California is a vital part of this nation, he said, with its agriculture, business, technology, and even Hollywood.

**Bentgrass**

Continued from page 17

GCSAA and NTEP. This research endeavor has set up test greens at 16 locations throughout the United States. There are eight test greens set up in cool-season locations that focus on bentgrass only. There are also eight other test green locations, which are set up in warm-season/transition zone areas. Of these eight, five areas include bentgrass test plots.

A total of 18 bentgrasses are included on each of these test putting greens. The greens are in use as practice putting greens, so they get some traffic. These greens are not used as part of play, so golf course superintendents are not evaluated. One of the main goals of this research is to compile regional data that will help in the selection process.

**TEST GREENS**

What else can be done to select the proper bentgrass for your site? If you have time, set up your own test green. The best example I've seen was at the Vintage Club in Palm Springs, Calif. In 1996, while I was in the process of bentgrass selection, I visited Doug Anderson, superintendent at the Vintage, to discuss his selection of Penn A-4. Doug had set up a test practice green and watched the performance of eight different bentgrasses over a one-year period, before making his final selection.

The advantages of building a test green are numerous. First, you get to watch it under your exact conditions. You also get to dictate the maintenance regimen. Things such as cutting height, watering practices, traffic, fertilization and topdressing can all be tailored to the desired level of turf quality. Also, you can evaluate the putting quality.

**OVER-WINTERING IN COLORADO**

In my selection of Penn A-4, I was concerned with its ability to survive the tough winters in Vail, Colo. I ran my own winter survival test on two test plots, each 10 feet by 10 feet.

In the first test plot we shoveled all snow off throughout the winter as a desiccation test. On the second plot we poured on water and built an ice layer about 10 inches thick to test for ice-related injury.

The following spring we were able to evaluate how Penn A-4 would over-winter in our climate. With no turf setback that spring, this was the final piece to the puzzle in selecting this grass for our course.

With the greater popularity of these new bentgrasses, we now have many real-life experiences to examine. When I selected Penn A-4, there were only a half-dozen golf courses using it at the time.

The combination of the NTEP data, research greens, superintendents' experiences and some testing on your own can insure you of a proper bentgrass selection for your situation.

Kevin J. Ross is director of golf course management at the Country Club of the Rockies and a regular contributor to Golf Course News.
Retooled Bay area layout reopens as Monarch Bay

By JAY FINEGAN

SAN LEANDRO, Calif. — An $8.1-million renovation has transformed the San Leandro Golf Complex into a sparkling 27-hole layout now called Monarch Bay Golf Club.

Set on San Francisco Bay, the remodeled facility gives Bay area residents a retooled championship layout and a spiffed up nine-hole executive course called Marina Golf Course.

Architect John Harbottle completely redesigned both courses in this project undertaken jointly by the City of San Leandro and American Golf Corp. It’s believed to be one of the largest privately funded renovations ever on a municipal golf facility. “American Golf brought the money to do the development and the city guaranteed the lease,” Harbottle said.

Measuring over 7,000 yards, the 18-hole daily-fee track — the Tony Lema Course — holds the distinction of being the second longest and most difficult par-71 layout in the state. However, multiple tees give players a range of options.

Named after local hero and British Open champion Tony Lema, the links-style layout meanders over gentle terrain. Sixteen of 18 holes enjoy views of San Francisco Bay, with some parts of the course bordered by natural wetlands.

FIRM, FAST FAIRWAYS

The executive nine-holer was closed for a year for its renovation, followed by the year-long shutdown of the Lema layout, which reopened in March.

“We renovated both of them top to bottom,” Harbottle said. “There wasn’t a blade of grass left unturned. The Tony Lema Course is totally different now. A lot of the layout remains the same, because the holes fit the terrain very well. But green locations have shifted, and the bunkering is completely changed.”

Steep, sod-faced bunkers placed throughout the course create a complex design, where careful strategy is rewarded with shortcuts and open approaches to the greens. The firm, fast fairways and prevailing winds make for a true links feel. The challenging layout is already scheduled to host the USGA Mid-Amateur Championship qualifying round in August.

LANDFILL LOCATION

The $8.1-million budget wasn’t as large as it sounds, according to Harbottle.

Barbaron, Southeastern co-building the North Course at Bonita Bay’s Mediterrà

NAPLES, Fla. — Last December, on the same day the Bonita Bay Group opened the South Course at Mediterrà, the company broke ground for its second layout, the North Course, two years ahead of schedule.

Now, in an innovative move to ensure the opening of the North Course this December, the company has hired two separate golf course contractors to build the Tom Fazio-designed layout.

“Barbaron Inc., out of Inverness, Fla., and Southeastern Golf, based in Tifton, Ga., have been brought in to pioneer this tandem approach.

MOVING AHEAD OF SCHEDULE

“Barbaron, of course, is the workhorse of the two contractor approach. It makes a lot of sense to have another contractor coming in at the end of the process to bring the course to completion,” said Danny McSwain, Senior Vice President of Barbaron.

“We’re working with Barbaron Inc. and we’ve also brought in another general contractor to work with Barbaron,” said Danny McSwain, Senior Vice President of Barbaron.

“By splitting the workload between Barbaron and Southeastern, the company is able to move the project ahead of schedule, allowing Barbaron to focus on the main course and Southeastern to work on the executive course.”

CrossCreek adds to Southern California’s public golf supply

By JAY FINEGAN

TEMECULA, Calif. — The semi-private CrossCreek Golf Club, set amid rolling hills here in the “wine country” of Southern California, will open in May, providing more daily-fee golf for an area badly in need of it. According to club officials, it will combine the access of a public course with the refinements of a private golf club.

The 6,833-yard layout, designed by Arthur Hills/Steve Forrest and Associates, occupies 180 acres of picturesque countryside. “CrossCreek is an absolutely beautiful site with every component needed for a great golf course,” said Hills, who has more than 150 courses to his credit. “There is plenty of variety and challenge for golfers of every ability, and the aesthetics will provide enjoyment for all. Changes in topography and beautiful views will create great drama and an overall memorable golfing experience.”

This is the first golf course for developer Imprimus, based in Palm Desert, Calif. “It’s a pretty small outfit, just a couple of guys,” said senior design associate Chris Wilczynski, the on-site project manager for the Hills team. “We’re doing a second course for them in Gypsum, Colorado.” Ranger Golf handled the construction out of its western division office, in Chandler, Ariz.

HILLS ON ALL SIDES

Temecula is a small but growing town northeast of San Diego and due east of San Juan Capistrano, not far from the Camp Pendleton Marine base. “Temecula is becoming a big place for people to move to from San Diego and Los Angeles,” Wilczynski said. “There are hills and mountains and kind of a rural flavor.”

According to Wilczynski, CrossCreek is a high-end course that will compete well in the area. “The whole property sits down in this big basin they call Walker Basin,” he said. “There are high hills on all sides, so it’s completely enclosed. But you do get some decent views of tall mountains to the west.”

The first five holes play along a corridor of stately oaks and sycamores, with a creek that criss-crosses the property. The back nine, which begins in the hills and returns through the woodsy section, features at least four tee boxes.

DANGER LURKS ON 13

“There are big hills on the back nine, with a lot of drama there,” Wilczynski said. “On the 13th, acape hole, the fairway sits on this high shelf and a big ravine runs the length of it, at an angle. It sets up a risk/reward situation for your tee shot. You want to carry as much of the ravine as possible. But the thing is 50 feet deep, so if you knock it in there, you’ll be dropping or hitting another ball.”

The course tests players early. The second hole, for example, a 420-yard par-4, plays straight over the creek to an elevated green that drops off sharply on the left. “The green is completely convex, so anything on the sides will roll off,” said Wilczynski. “It’s quite tricky.”

STAFF WEARING KNICKERS

Aiming to capture the ambience of golf’s “golden age,” all CrossCreek employees will sport traditional uniforms, including knickers, white shirts and bow ties. On-course “player assistants” will advise golfers through their round.

Green fees are expected to be in the $80 to $100 range, according to Jim Decker of the Hills design group, but membership entitles players to unlimited play as well as exclusive rights and privileges.

Golf and club facilities are being managed by Links Management, based in Farmington, Utah.

Nicklaus and Bonita Bay planning new Florida course

BONITA SPRINGS, Fla. — Jack Nicklaus has teamed up with the Bonita Bay Group to build the Retreat, a Nicklaus signature golf course set to be constructed under Audubon Cooperative Signature Sanctuary guidelines.

A private club, the Retreat will be situated on a secluded, 275-acre site here in southwest Florida. It’s being created as a free-standing facility, with no residential development and membership limited to 275. The site offers outstanding natural assets, including mature oak, pine and cypress trees, and a natural flow way through the center of the property.

Ground will be broken once 100 membership reservations have been received. It is anticipated that the course and its support services will open in fall 2002, with the clubhouse to open in fall 2003.

EL DORADO HILLS, Calif. — The golf course design firm of Graves & Pascuzzo Ltd. has been on a hot streak recently. It opened five courses in California, moved on the East Coast, ventured into Japan and made its first design sojourn into Europe with a project in Italy.

“It’s been hectic,” said managing partner Damian Pascuzzo. “We strive on every project to give the attention to detail that is needed in designing a golf course that is memorable, challenging, and fun to play. That attention to detail takes time. Our philosophy is to take on fewer projects and do them well.”

One example is Maderas Golf Club, which sits in the picturesque foothills of San Diego. It opened last fall to rave reviews from golfers and golf writers alike.

“The course was designed to recycle the parkland style,” said Pascuzzo. “Tes were strategically placed on cliffs and rock outcroppings, creating dramatic drives to fairways framed by stands of oaks and sycamores. With elevation changes running about 200 feet, the course offers superb vistas, challenging options and plenty of thrilling shots. According to The Southern California Golfer’s Guide, “Maderas promises to deliver golf memories of a lifetime.”

SCOTTISH FLAVOR

The Bridges, another Graves & Pascuzzo design, opened late last year and created quite a buzz among golf enthusiasts. Inspired by a trip to Scotland’s Royal Dornoch, Pascuzzo was committed to bringing a unique style of golf to Northern California.

Located 30 miles east of San Francisco in the foothills of San Ramon, The Bridges is part of a master-planned community developed by Shapell Industries. This par-73 layout sweeps through an expansive valley and can play to over 7,200 yards.

While The Bridges does not claim to be a true links course, it can definitely feel...
By JAY FINEGAN

RINGS ISLAND'S S.C. — Construction action is underway at the private Golf Club at Briar's Creek, a new Rees Jones design near Charleston. Set at the edge of one of South Carolina's most scenic rivers, amid a 900-acre retreat of maritime forests and unspoiled marshland, the course will enjoy a superb natural environment.

John's Island lies next to Kiawah Island, home to six golf courses.

Each of the Briar's Creek nines will cross the marsh, which serves as both a hazard and an avenue to fine views of the Kiawah River. The inland holes skirt freshwater wetlands and wind through huge stands of live oaks. Much of the property served as a cotton plantation at one time.

The project is the first golf course for developers Steve Koenig and Ed Myrick, who originally owned the land. The complex will include some 60 houses, mostly sited on large lots along a new lake. The lake, requiring the excavation of a million cubic yards of dirt, is set apart from the fairways to enhance a "pure" golfing experience. "You'll be hard-pressed to see 10 homes while you're playing," Koenig said.

A 12,000-square-foot clubhouse, intended to be "comfortable and casual," will feature a dining room, a billiards room, a complete pro shop and exercise facilities, along with locker rooms and a lounge.

OPEN BY THANKSGIVING

The 300-acre layout is scheduled to be ready for play by Thanksgiving. Wadsworth Golf's Southeast division is building the course, expected to play at about 7,100 yards.

The layout is currently being shaped and will be both sodded and sprigged once irrigation and drainage work is completed. Superintendent Kyle Bibler is fully on board and assisting in the construction.

The club is being billed as one of the most exclusive private golf clubs in the region. The 20 "founding members" paid up $700,000 each in exchange for a three-percent stake in the development.

Founding members include Jeffrey Immelt, the chairman-designate at General Electric, and Robert McNair, owner of the Houston Texans, a new NFL franchise.

MEMBERSHIP BY INVITATION ONLY

Membership is by invitation only. "We just sent out the first 40 invitations," said Sara Koenig, membership coordinator. "We have our founders completely in place, and now we're working on our regular memberships. People are nominated by current members, so the invitations come from founders."

Regular memberships require $675 in monthly dues, and $75 more for a family membership. The total membership will be capped at 300.

The property is rich in "low country" wildlife, everything from deer and raccoons to alligators and a variety of coastal birdlife, ranging from ospreys and egrets to herons.

The club will include a driving range; chipping, pitching and putting areas; and a state-of-the-art teaching facility.

Hills design unfolding in the Rockies' Roaring Fork Valley

GLENWOOD SPRINGS, Colo. — Site clearing recently commenced at Rose Ranch Golf Club, an Arthur Hills/Steve Forrest and Associates design located in the Roaring Fork Valley, about 45 minutes west of Aspen.

The 7,200-yard, par-72 layout, scheduled to open in the late summer of 2002, will take maximum advantage of the Rocky Mountain scenery, according to golf architect Chris Wilczynski, the project manager.

The highlight of the layout will be the finish, "The last four holes are located on a plateau on top of a mountain, about 300 feet above the other holes on the course," said Wilczynski. "These holes will be very dramatic to play and will help make Rose Ranch the best course in the Roaring Fork Valley."

A strategic course that will place a premium on accuracy and shotmaking, the layout has a number of holes on the valley floor. Numbers three and four run alongside the Roaring Fork River, which for fishing enthusiasts is a gold class trout stream.

Mount Sopris, standing 14,000 feet, provides a stunning backdrop to holes 10 and 11.

WADSWORTH BUILDING PROJECT

Wadsworth Golf Construction will handle the construction, under their southwest office in Buckeye, Ariz.

Troon Golf, of Scottsdale, Ariz., has been retained to provide project management during the construction and will stay on as the management company and course operator once Rose Ranch opens for play.

The course owner is L.B. Rose Ranch LLC, a division of Lehman Brothers, a New York-based investment banking firm. The developer is Gate Capital Properties, of San Francisco.

Troon is currently interviewing candidates for the position of superintendent.
Mysterious donor keeps Smoke Rise G&CC private

STONE MOUNTAIN, Ga. — Smoke Rise Golf & Country Club here has completed its conversion to equity-club status, thanks in part to a $1-million gift from an “angel” member.

The club, managed by Billy Casper Golf Management (BCGM) of Vienna, Va., had to come up with an additional $2 million from members to secure the gift, which was intended to keep the club exclusively private.

Dean Robertson, general manager of Smoke Rise, spearheaded the membership’s matching $2-million contribution. He had 90 days to raise the money before the gift offer was revoked.

Named BCGM’s general manager of the year for his efforts, Robertson oversaw $1.4 million in equity conversions and $600,000 in member assessments to meet the mandate.

ANGEL REMAINS ANONYMOUS

To further enhance the financial stability of the club, Smoke Rise Properties Inc., the guarantor group, added $500,000 to the effort by converting $500,000 in debt to equity memberships at the club.

“The management team at Billy Casper Golf demonstrated the operational means and expertise necessary to ensure that Smoke Rise thrives financially going forward,” said the “angel” member, who declined to be identified. “The company’s proficiency and proven track record managing properties successfully persuaded me that the money would help make Smoke Rise a premier facility, of which the members and the community can be proud.”

The operational change capped a vigorous one-year period during which BCGM guided the club to a 180-degree financial turnaround.

Hallmarks of the effort, which began in February 2000, include the firm’s management of a member-driven $3.5-million recapitalization, including the equity conversion of all membership classes and the $1 million gift.

“This member’s tremendous show of support for our firm’s capabilities is extremely gratifying,” said Peter Hill, Billy Casper Golf’s CEO. “We routinely steer clubs to financial prosperity, but we’ve never before received this type of feedback to our efforts.”

CLUB ON FIRM FINANCIAL FOOTING

Prior to the equity-club conversion, Smoke Rise, located 15 minutes from downtown Atlanta, was a refund-type property. Members received a specified refund upon resignation.

“Converting to an equity club places Smoke Rise in a great position, both from financial and marketing standpoints,” said club president Gary Sekulow. “Smoke Rise’s financial stability is ensured for years to come.”

A full-service club, Smoke Rise boasts such amenities as an Olympic-sized pool and a 28,000-square-foot clubhouse.

Membership sales accelerated once word spread of Smoke Rise becoming an equity club. Fewer than 200 full golf memberships remain to be sold.

Graves & Pascuzzo

Continued from page 20

like Scotland when the winds blow off San Francisco Bay and the shot before you calls for a bump-and-run over a tightly cropped fairway to an undulating green.

The planting scheme at The Bridges was also patterned after Royal Dornoch’s gorse-lined hills. Not a single tree was planted on the course. Instead, over 100,000 native shrubs cover the hillsides and rough areas.

The firm’s three other new California projects involve The Institute in Morgan Hill, Westbridge in La Habra, and Sterling Hills in Camarillo. They also completed the 18-hole renovation of La Quinta Country Club, a private course near Palm Desert, on the edge of the Santa Rosa Mountains National Scenic Area. Opened

Two builders
Continued from page 19

said Vince Barraco, senior project manager at Mediterra. "Two full golf construction crews are working simultaneously, and as a result, we have doubled our progress on the North Course.

"An added benefit of the dual team approach," continued Barraco, "is that we are able to be more efficient while developing the course. For example, we can sod the bunkers and mounded areas because they take minimal irrigation. And because we will finish the course six months prior to our grand opening, we can delay planting fairways and ornamentals until the water conditions improve. "Florida is in the midst of a crisis-level drought."

A TREND IN THE MAKING?

Tom Marzolf, senior design associate for Fazio Golf Course Designers, feels this method of golf course construction will be the trend of the future, due to increased demand to build more expensive courses faster. 

"Developers today want to build $8-million courses and have them completed within a year," he said. "Using two contractors simultaneously is a way to meet these deadlines while ensuring the highest quality. There is no other course that I know of, nationwide, that has employed two separate contractors on the same project."

GIVING MEMBERS A CHOICE

Since construction began on the North Course, 11 lakes have been constructed, 16 holes have been cleared, six holes are roughly shaped and irrigation is scheduled to begin this spring.

The North Course, designed as a companion layout to the South Course, will also be distinctly different. Greens will be tiered instead of layered, and there will be more green and grade changes. The North Course will also feature naturalized edges to blend with the adjoining wetland areas.

"We want our membership to have the flexibility to choose between two different styles of golf," said Susan Hebel Watts, vice president of the Bonita Bay Group and general manager at Mediterra. "We feel that they'll appreciate having two courses and two different golfing experiences available to them in the same community."

Like the South Course, the North Course is designed to meet Audubon Signature Cooperative Sanctuary requirements. Both courses are Fazio designs.

MUUCHI NCOLO REQUIRED

The Bonita Bay Group is developing Mediterra in the classical style of Europe's Mediterranean region. The master plan for the 1,697-acre community includes some 950 residences and more than 1,000 acres of open space. Membership in each golf club is limited to 275.

Mediterra Realty is now offering home sites from $450,000, coach homes from $450,000, villas from $600,000 and single-family homes from $1.85 million to more than $5 million.

The Club at Mediterra's 25,000-square-foot clubhouse, which opened in February, is the focal point of the Piazza, which will also include tennis courts, swimming pools and a fitness center. A private beach club with pool on the Gulf of Mexico will be available for resident members.

Graves & Pascuzzo
Continued from previous page

in 1959, the La Quinta course is a PGA Tour stop for the Bob Hope Chrysler Classic.

NEW MARKETS IN EAST AND ABROAD

While most of their courses reside in the western states, the start of a new century has taken Graves & Pascuzzo into new markets. This year their designs have reached the East Coast, along with Italy and Japan.

Graves & Pascuzzo recently unveiled two new courses in Massachusetts - Indian Pond in Kingston, and The Ranch Golf Club in Southwick. Indian Pond, a private club, is part of a master-planned residential community owned by Massachusetts developer Fred Tonsberg. This course features holes that wind through heavily wooded foothills.

The Ranch Golf Club, a daily-fee layout, occupied a one-time dairy farm that dated back to the Colonial era. The course's charm and feel reflects the history of the area. The layout, which plays through heavily wooded areas as well as open fields, provides variety and visual appeal. Also under construction is a new course in Torino, Italy, scheduled to debut this year. The firm is working as well in Japan on the renovation of an exclusive private club in Sapporo called Otaru Golf Club, which will host the Japan Open in 2006.

Graves & Pascuzzo was founded in 1959 by Robert Muir Graves, who was joined by Pascuzzo in 1980. Based here in Northern California, with additional design offices in Oregon and Utah, the firm has designed more than 80 new courses throughout the world and collaborated on the remodeling of some 720 more.
Wolf Creek
Continued from page 1
golf course even be built in this rugged site? Only by playing the course can you appreciate the creativity, tenacity and obvious love of the high desert environment that guided the designer, owner and builder, Dennis Rider.

Rider spent two years walking the 160-acre site to learn how to blend the course into the landscape. When construction finally began, he worked with his head superintendent, Kelby Hughes, his son John, three bulldozers, one scraper, and a crew of 30 men to carve out his creation.

Rider and Hughes have worked together here in Mesquite for 10 years, including a stint with Arnold Palmer when he built the Oasis Golf Club in 1995. They have watched the town of Mesquite – 80 miles north of Las Vegas on I-15 – grow from a truck stop into a town of 20,000.

HIGH DRAMA ON SECOND HOLE
With the opening of Wolf Creek, Mesquite is stepping towards becoming an affordable golf destination to rival Palm Springs and Scottsdale.

"The toughest part in building Wolf Creek was developing a routing with two loops," Rider said. "With this rugged terrain you needed to allow players back to the clubhouse after nine. I really just let the land determine where we could go. We did have the chance to add challenge and fun to some of the golf holes."

Rider certainly showed imagination while creating intriguing golf holes. Five tee shots play off cliffs over 100 feet high. The most dramatic, the 440-yard par-4 second hole, is played from an 11-story-high tee. A player must climb up 90 sandstone steps to reach a narrow ridge line draped with grass. From here a player must drive the ball 200 yards over another sandstone ridge to the fairway far below. The views are breathtaking and the golf shot is out of fantasyland.

SLOPE RATING OF 154
This type of feel appears on almost every golf hole at Wolf Creek. From hitting to elevated greens, to gazing down on one of the seven lakes that line the course, to being struck by the contrast of grass, white sand bunkers, and multicolored rocks. You are left questioning if you can even play this wild track.

Rider was careful to measure and plot each shot. He added five sets of tees so that any golfer could have a chance.

"The elevated tee shots make it hard to judge distance. But if you choose the proper tees the golf course is very playable," Rider said.

The course plays at 4,169 yards from the front tees and grows to a healthy 7,018 yards from the back tees. Riders have a slope rating of 134, one of the highest in the nation. From the middle tees the rating is at 134, but a player can still enjoy the round after overcoming the intimidation factor off the tee.

CHOPPER USED IN CONSTRUCTION
To build this course took special care and ingenuity. The sand cliffs look petrified but are actually very fragile. To protect them, much of the large materials were moved by helicopter, including sod, sand, pipes, and sandstone slab steps.

"We were lucky to have the regional airport right behind the golf course," said Kelly Hughes. "We could bring in materials to the chopper and easily load things on the runway. The chopper..."
Nevada desert

Continued from previous page

per probably added 20 percent to the $16 million construction costs, but it turned into a huge time saver. We were able to build and completely sod it in around 12 months."

The soft sand was conducive to digging and shaping, but special care had to be taken for drainage as heavy rains could lead to flash flooding. A complex system of drains carries all runoff to a drain line that runs under the center of the course.

The course boasts a state of the art dual-pumping system that handles the natural water for water features and collection ponds and keeps that water separate from the reclaimed water that is used for irrigation. Every effort was made to keep these surroundings a perfect natural habitat for the desert tortoise, desert fox, hawks, roadrunners, Gila monsters, tarantulas, and scorpions that thrive here.

Harvesting Stray Balls

The entire course was covered with hybrid Bermudagrass sod and Dominant bentgrass sod for the greens. The 49 bunkers are filled with crushed white sandstone that was ground specifically to Rider’s specifications for proper color and texture to keep it from blowing away. No extra dirt had to be brought in, as the natural sand was an excellent sub soil for the sod.

“We stress that golfers must stay on the maintained fairways and the golf cart paths because of the fragile nature of the desert,” Hughes said. “We provide ball retrievers on the golf carts. If you can’t reach a ball that you hit into the desert, you must leave it, as footprints cause immediate destruction of the landscape. We have two workers that go out every month to carefully harvest balls in the sensitive areas so they don’t become an unsightly collection.”

Wolf’s Natural Habitat

Rider named the course after the Mexican Wolf that was hunted to near extinction by settlers. He feels that as man has nearly eliminated the wolf, man should do something to protect the wolf’s natural habitat. This continues to be the driving force behind the course’s creation. That sense of wildness exists throughout the layout and will inspire golfers as they enjoy playing in this surreal setting.

“Always in the back of my mind is the desert,” Rider said. "Wolf Creek will help to preserve this ecosystem for years to come, while giving people an opportunity to enjoy the desert’s great natural charms.”

Monarch Bay

Continued from page 19

“When you’re dealing in this part of the world, that’s not a huge amount of money,” he said. “Also, it included some work on the clubhouse and driving range.”

The location of the complex — it lies atop an old landfill — also drove up the costs. “We weren’t allowed to cut an ounce of dirt on the property because of the landfill cap,” Harbottle said. “We had to import all the materials we used to form bunkers and greens.”

Moreover, the native soil on the fairways was nearly useless as a turfgrass base. “You couldn’t grow a thing on it,” the designer said. Some 90,000 cubic yards of sand were brought onto the site and spread to a depth of six inches. "We placed it everywhere we were going to plant to get a good firm playing surface," Harbottle said. “The fairways are rye, and the greens are L-93 bentgrass.”

Wadsworth Golf Construction handled the heavy lifting. John Harbottle Design, based in Tacoma, Wash., specializes in new golf course design as well as renovation and restoration of existing courses. A member of the American Society of Golf Course Architects, Harbottle lectures on golf course architecture throughout the country.
Ross renovation
Continued from page 19
t right there on each individual hole plan. It's not just a route plan - these are the original working drawings used during construction.

"The club also has some very good vintage photography, too, so we know quite well what Ross intended this course to look like. Bit by bit," Silva said, "the scope of the work changed and eventually the club decided to go the full restoration route."

HONING TO VINTAGE STYLE

Working with superintendent Greg Burleson and Gainesville, Ga.-based contractor Course Crafters, Silva will thoroughly restore the Augusta layout. All 18 putting surfaces will be refurbished in accordance with the Ross drawings. Existing bunkers will be restored in the vintage style. Lost bunkers will be reinstated to their original positions and configurations. And all 18 tee complexes will be rebuilt.

"We won't be moving fairway bunkers further down the fairways to accommodate modern play lengths," explained Silva, "and here's why: Ross used his trademark, random bunker approach at Augusta. He sprinkled bunkers about the fairways in such a way that they would come into play for everyone, no matter how far you hit it.

"Also, and just as important: the original bunkers were cleverly cut into slight upslopes. Moving them for distance's sake would not allow the bunkers to be placed in such wonderfully natural positions."

CLUB'S EARLY DAYS

Formal golf has been played here by Rae's Creek since 1897, when the nine-hole Bon Air Golf Club began accommodating local members and guests of The Bon Air Hotel, which owned this course. By 1900, when Harry Vardon played an exhibition at Bon Air GC, the facility had expanded to 18 holes. Later that year the hotel renamed it the Country Club of Augusta.

To ease crowding on this so-called Lake Course, club members built another 18 strictly for their use - the Hill Course. Designed by club president Dr. William Henry Harrison Jr. and longtime pro David Ogilvie, it debuted in 1906. Summer guests included John D. Rockefeller, Warren G. Harding and William Howard Taft.

In 1921, the club officially settled on its current moniker, Augusta Country Club. Five years later, Seth Raynor would convert the sand greens on the Lake Course to Bermudagrass. In 1927, Donald Ross - in town to design the Forest Hills Golf Course - was retained to convert the sand putting surfaces on the Hill Course to Bermudagrass. He also substantially rerouted the front nine and completely rebunkered the layout, as detailed on his drawings.

BOBBY JONES' GRAND SLAM

The Lake Course would not survive the Depression, but the Hill Course not only endured but compiled a luminous tournament history of its own.

Bobby Jones kicked off his Grand Slam year at Augusta CC with a 13-shot victory over Horton Smith in the inaugural Southeastern Open. That was 1930, several years before he would found the adjoining Augusta National Golf Club on the other side of Rae's Creek.

"Like Biltmore Forest, Seminole and others, Augusta Country Club is a great example of Ross' ability to use the terrain to its absolute best advantage," said Silva, a partner with Uxbridge, Mass.-based Cornish, Silva and Mungeam Inc. "The routing here is superb, but the Ross details need reviving. His working diagrams show putting surfaces that had more undulation than they do today. The work we do this summer will seek to re-install some of this flavor - within reason, considering today's faster putting speeds.

"The original course was sprinkled with random bunkers throughout the fairways," he added, "including a really great set of diagonal cross-bunkers on the uphill third hole. There was wonderful flow to the layout, as the fairways sinewed their way around bunkers from tee to green. The working diagrams even show the 16th as a punchbowl green. The club is determined to bring all this back."

Your course is only as good as its foundation.

Every blade of grass depends on the soil beneath it. On the soil microbes that feed it. And nothing provides food and energy to soil microbes like Nitroform ureaform. It releases the right amount at the right time. Only when grass needs it.

The controlled release of Nitroform gives you six months or more of turf-growing benefits and even longer-lasting payoffs for your soil. Nitroform fights the effects of heat, traffic and drought. It helps develop roots and reduce thatch. Have your fertilizer supplier make Nitroform the foundation of your fertilizer program.

The Foundation Nitrogen

Nitroform is a registered trademark of Nutro America Corp, 83500 Nutro Technologies, Inc.
Z Golf enters management field

By JAY FINEGAN

BEVERLY, Mass. — Michael Zmetrovich, formerly senior vice president at Golden Bear Club Services, has formed Z Golf Properties LLC, a boutique club management, consulting and development company.

The new firm will focus primarily on high-end private clubs, working with them in the areas of planning, design, financing and operations. In addition, Zmetrovich said, the company also will work with select daily-fee facilities, resort properties and master-planned golf communities.

RESOURCE FOR UNDERPERFORMING CLUBS

Already, Z Golf is partnering in the development of a private golf club in Massachusetts. Under the conditions of this long-term agreement, Z Golf will be involved with the planning and design of the entire club and associated residential development. It also will oversee the development and implementation of the membership program and manage the grow-in and opening of the facility. Thereafter, it will handle day-to-day operations.

BRIEFS

NELSON TO DIRECT SUNCOR SALES

PHOENIX, Ariz. — SunCor Golf, a leading course management company specializing in high-end daily-fee courses, has hired Tiffany Nelson as director of sales. She will be responsible for generating, booking and executing groups and tournaments at all six SunCor courses in the Southwest. She also will be in charge of promoting and selling SunCor’s new Player’s Club Card, which enables golfers to play at SunCor’s five Arizona clubs for 25-to-50-percent discounts, among other benefits.

STRAUSS TO HEAD MARKETING FOR BIG ISLAND COURSES

WAILEA, Hawaii — Kris Strauss has been named director of sales and marketing for the two championship courses at Wailea Beach Resort. Strauss brings more than 10 years of experience to his new post. He most recently served as director of sales and marketing for OB Sports Golf Management courses in Las Vegas, Nev. Prior to that, he headed up marketing and communications for the PGA of America’s Southwest Section.

KEMPERSPORTS PROMOTES DELL, O’BRIEN AND SANDERS

NORTHBROOK, Ill. — General managers Steve Dell and Ron O’Brien, along with head golf professional O.B. Sanders, have all accepted new positions within the KemperSports Management organization. Dell, who was the general manager of Water’s Edge Golf Course, in Worth, Ill., will move to the home office in Northbrook as director of golf for Midwest Municipal Operations. He will oversee the Chicago Park District facilities, Vernon Hills Golf Course, Water’s Edge, and Golf Club of West Virginia, as well as future municipal properties. Ron O’Brien, formerly general manager of Vernon Hills, will now assume that position at Water’s Edge Golf Course, O.B. Sanders has been named general manager of Vernon Hills.

Palmer unveils reciprocity plan

ORLANDO, Fla. — Palmer Golf Management has given its private club members an extra incentive to look forward to this spring with the unveiling of its Palmer Privileges reciprocal play program. Designed as a value-added benefit for its private club members, the reciprocal play initiative falls under an umbrella program of member-based benefits called Palmer Privileges, planned for implementation by Palmer Golf. Under the new program, existing members at Palmer Golf’s nine private clubs receive complimentary enrollment into a network of more than 50 international clubs and courses.

Reciprocity is a key component of the company’s efforts to strategically position itself within the marketplace according to Brian Donahue, national director of sales and marketing. In addition, Donahue cites improving the golf experience will be a throwback to old school - fairways and trees. The terrain has some slight roll, being in the Austin hill country, and has some great oak trees. "We like Georgia and the Carolinas, and has some slight roll, being in the Austin hill country, and has some great oak trees."

Baine heading up new Ironwood Golf

By JAY FINEGAN

AUSTIN, Texas — Burt Baine, a 25-year member of the PGA of America, has taken over as president of Ironwood Golf LP, a new course development and management firm based here. Ironwood is a subsidiary of Masonwood Development Corp., which creates master-planned residential communities around the country. "We consider ourselves to be more golf development than management," Baine said about Ironwood. "We very well might manage our own properties, but we might farm that out. Our primary function is development, planning, construction and creation of golf courses."

FIRST COURSE NEAR AUSTIN

In the past, Masonwood’s developments have lacked golf courses, but the company now plans to add them as amenities. Ironwood was formed to handle that part of each project. "We expect to do quite a number of courses," Baine said. "Ironwood will market development with Masonwood. If we have a 500-acre site, I’ll go in first on the golf side and recommend we do a daily-fee or a private course, and jointly we’ll develop the project."

Ironwood Golf’s initial project is Behrens Ranch Golf Club. The private course will be part of 880-acre Behrens Ranch, a Masonwood planned community expected to have 900 houses priced up to $800,000. No architect has yet been named for the course, located near Round Rock, Texas; no builder has been named either, but Baine already has short lists for both.

TEXAS DEVELOPMENT GOING WILD

The 18-hole layout will be a "traditional Texas-style golf course," Baine said, with few homes planned to front the course proper. "There are homes on five or six holes," he said, "but only on one side, so the golf experience will be a throwback to the old style - fairways and trees. The terrain has some slight roll, being in the Austin hill country, and has some great oak trees." Groundbreaking is expected by September.

Masonwood has built residential projects all over Texas, and Baine sees opportunities there and in the Southeast. "We like Georgia and the Carolinas, and also Tennessee," he said. "And the real estate market in Texas is incredibly strong. Dallas, Austin, Houston and San Antonio are just going crazy right now with housing developments."
T-Links, Teetimes.com form alliance

WILLIAMSBURG, Va. — T-Links Inc. and Teetimes.com have reached an agreement for Teetimes.com to be the exclusive provider of tee time technology for T-Links’s 150-plus member courses. Regional introduction of the system will begin immediately with the first installation planned for courses in Atlantic City, N.J.

The five-year partnership agreement will include installation of the Teetimes.com system into T-Links courses in Hilton Head, S.C.; the Sandhills/Pinehurst region of North Carolina; Myrtle Beach, S.C.; Biloxi, Miss., and Charleston, S.C. The Teetimes.com suite includes a tee sheet and yield management system, integration with existing point of sale programs and real-time on line hotel golf packaging services.

"Teetimes.com provides the mix of technology, reliability and customer service that we were looking for," said T-Links president Terry Sedalik. "We received very good recommendations from our other regions where their system is installed, including Ocean City, Williamsburg and Virginia Beach. We will begin the installation process on a region by region basis."

T-Links System Replaced

The new reservation system will replace the T-Links system, which was designed and developed in Myrtle Beach in 1992. The existing computer platform will be replaced by Teetimes.com’s Oracle/Solaris network, allowing the regions to take full advantage of the Internet and other advances in technology to effectively and efficiently promote their business.

Teetimes.com CEO Danny Stoval said the T-Links agreement marks a turning point for the company. "Our biggest challenge is not technology. It’s not attracting golfers to our site. It is signing up golf courses," he said. "The T-Links group includes some of the most well-known and respected courses in the country. We are confident that this agreement will provide the catalyst for us to rapidly expand our Teetimes.com course network."

Marriott Golf sends up Waller

ORLANDO, Fla. — Robert Waller, CGCS, has been named associate director of grounds operations for Marriott Golf.

Waller will assist with establishing preferred vendor accounts while maintaining the existing accounts of Marriott Golf properties. He’ll also handle recruitment of superintendents, work closely with the company’s golf property development team, and conduct site visits and field reviews of Marriott layouts.

Palmer plan

Continued from page 27

membership standards for the portfolio as a secondary effect of the program.

“This program strengthens our member benefits at each of our private clubs,” Donahue said. “The reciprocity program provides our opportunities to leverage our marketing within our markets by offering a unique benefit.”

In addition to the reciprocal playing privileges at the private and semi-private clubs, members also have access to more than 20 of Palmer Golf’s daily-fee facilities nationwide at a preferred rate.

Furthermore, Palmer Golf private club members have reciprocal playing privileges at more than 20 international affiliate clubs through a unique partnership with International Management Group’s Sportsclub. These international additions provide members discounted greens fees of up to 50 percent.

organization's recent restructur-
ing. As senior vice president of
the Club Services unit, Zmetrovich
was responsible for the day to day
and strategic management of all
aspects of the company.
During his tenure — 1997
through 2000 — Club Services
opened six high-end facilities,
including Old Works Golf
Course, The Bear's Club, Ver-
mont National and Pasadera. It
also managed 12 different clubs,
including the Golf Club of Pur-
chase and Muirfield Village, in
Dublin, Ohio.
Zmetrovich also was on the
executive committee of Execu-
tive Sports International, another
Nicklaus division and one of the
largest operators of professional
golf events in the world.
When Nicklaus shut down the
Club Services division late last
year, deciding to focus solely on
golf course design, Zmetrovich
was left without a job but not
without a plan.

NICHE IN TOP PRIVATE CLUBS

"While a great deal of golf de-
velopment has shifted to
the up-
scale daily-fee realm, we see a
tremendous opportunity in high-
quality, well-operated private
golf clubs," he said.
"This opportunity extends
both to new projects and to those
existing facilities which aren't
competing effectively in the high-
end marketplace," he added. "Z
Golf was formed to provide a
resource to these clubs, by com-
bining the highest possible quali-
tative standards with state-of-the-
art financial, human resources
and marketing expertise."
Zmetrovich said he's excited
to be launching his own com-
pany, especially for the opportu-

LochenHeath

the ball in either high or roll
it in low. A wet design re-
quires you to hit the ball in
high and drop it on the
green. The bunkering style is
classical — very Donald
Ross- or Alister Mackenzie-
looking."
"The bunkers are dra-
matic," Smyers said. "But it
is such a wonderful site that
with the movement of the
land and use of native grasses,
we kept them pretty basic.
There are 69 bunkers and no
water hazards."
The course overlooks
Grand Traverse Bay, af-
fording splendid views of
Lake Michigan. The lake
generates the kind of
winds that will undoubt-
edly affect club selection.
"It's going to be like an
overseas experience,"
Grove said, "akin to play-
ing the southwest coast of
Ireland, for example."
Grove's favorite hole is
the par-3 17th, an uphill 156-
yarder with a cluster of five
bunkers in front of the
green. "There's a lot of
movement and roll to the
course," he said.
FULL CADDY PROGRAM
LochenHeath will have
a full caddy program. "Our
goal is to get people back
in the old-school mindset,"
Grove explained. "We call
it understated elegance.
You take a caddy, go for a
walk, shut your phone off
and spend a day with your
friends or family. Get away
from the hectic pace for a
little while."
The LochenHeath devel-
opment consists of 84 half-
acre luxury home sites
situated within the golf
course and directly
fronting the East Grand
Traverse Bay, with a
shared commons area and
access to two beaches.
Club membership will be
limited to 300 and is by
invitation only and avail-
able to individuals,
couples, families, busi-
nesses, and LochenHeath
residents.
Heller Financial enters golf lending market
Continued from page 1

According to Lockridge, the current oversupply of courses, Nekoroski is optimistic about the prospects. “The overbuilding is obviously a big concern these days. A lot of markets have been overbuilt,” he said. “But there are still good deals in every market. Those deals will get done, and we hope to get our fair share.”

TARGET: EXISTING COURSES

Nekoroski sees the primary market consisting of course operators looking for acquisitions and course owners in need of refinancing. Experienced course operators, especially those who can run clubs more efficiently and profitably, will receive preferential treatment.

“We are cash-flow lenders,” Nekoroski said. “We’ll be looking at debt-to-coverage ratios. The main objective will be doing deals with seasoned operators. We’ll also be looking at turnarounds where there may not have been great debt service. If it’s a turnaround acquisition by a seasoned pro, someone with a proven track record, we most likely will be able to buy into their story and underwrite future potential.

“For more of a ‘one-of type of deal, with somebody who owns one course, we’ll want to see some history,” he added.

NO NEW CONSTRUCTION

Loans for new course construction are virtually out of the question, at least for now. “Eventually we may do some,” said Nekoroski, “but we’re going to take it slow. We want to get our feet wet first with some good solid cash-flowing deals.”

Lockridge says the group will be looking to invest in courses priced in the $4-million range and up.

“Frankly, our goal is to get in and do a bunch of existing courses,” she said. “We want to do a lot of acquisition financing. We’ll be doing first-mortgage financing on everything we undertake, loaning 50 to 75 percent in the loan-to-cost ratio if it’s an acquisition or in loan-to-value if it’s a refinancing.”

The Heller golf team has no predetermined budget or portfolio objective. “Whenever we go into a new business at Heller, we don’t set some kind of number to shoot for,” Lockridge said. “Our modus operandi is to get into the market and do as much great business as we can.”

INCOME MULTIPLIERS

A big concern right now is that many course acquirers are waiting for prices to fall still lower before plunging back into a buying mode.

“Net income multipliers need to get to 8.5 times trailing 12-month earnings before they’ll get...”
Our new sprayers have hydraulic drive

Turning radius allows maneuverability around the tightest greens

Precise controls for spray application rates

Now we've eliminated all the problems of mechanical drives...as well as our competition.

Smithco Spray Star 1000 - the only sprayer made just for greens and tees

This all-new low-profile sprayer offers you exclusive hydrostatic drive and a remarkable level of sophistication at surprisingly affordable price:

- Smithco's new Hydro Drive System eliminates belt drive/3 speed mechanical system maintenance and delivers power smoothly through-out every speed range
- Turning radius allows maneuverability around the tightest greens.
- 7.1 PSI footprint floats over greens.
- Extremely precise controls for spray application rates plus hydraulic power steering and the choice of computerized or manual spray control system.

Smithco Heavy-Duty Spray Star 1600H

Smithco's large-capacity 160-gallon sprayer is designed for tees and greens as well as fairways. Exclusive hydraulic drive provides extremely precise applications of chemicals with the power and maneuverability to handle the tightest areas. A variety of options make the Spray Star as sophisticated a sprayer as you could want. Superior in every way to its competition.

Call Toll Free 1-877-833-7648 and we'll arrange for a demonstration of the new Smithco Sprayers, Bunker Rakes, Sweepers or any other Smithco product.
SRO APPOINTS DUNN

CORVALLIS, Ore. — Seed Research of Oregon (SRO) has appointed Bill Dunn vice president. Mike Robinson will remain president of SRO, but will take a less active role in the day-to-day management, focusing more on research and international development. Dunn will have operating authority over all areas of the business in Robinson’s absence. In addition, Dunn will remain director of sales, marketing and production. Dunn joined SRO last September as director of production and product development and has over 20 years of experience in the green industry.

DROHEN, CARMODY JOIN PURSELL

SYLACAUGA, Ala. — Ed Carmody and Andy Drohen have joined Pur塞尔 Technologies as regional sales managers. Carmody will be based in Michigan and will be responsible for the Midwest region and Drohen will be based in Massachusetts and will handle the Northeast region. Both will be in charge of expanding regional markets and increasing sales of POLYON and other products.

SIMPLOT PARTNERS JOIN SHAFFER

SAN DIEGO — Craig Shafer has been named national accounts manager for Simplot Partners. Shafer will be responsible for the development and implementation of sales programs for national accounts and golf course management companies.

VALENT NAMES FRYE

WALNUT CREEK, Calif. — David Frye has been named marketing manager and alliance manager for Valent USA’s Professional Products division. He will oversee the marketing and alliance efforts for the golf course, lawn care, pest control, greenhouse and nursery markets.

Dow AgroSciences snaps up Rohm and Haas’ agrochemicals business

By ANDREW OBERBECK

INDIANAPOLIS — With Dow AgroSciences absorbing Rohm and Haas’ Agricultural Chemicals business for $1 billion, the consolidation cycle in the agrochemicals industry has claimed another victim.

"Everyone is trying to get their businesses bigger," said John Roberts, an analyst with Merrill Lynch in New York City. "It is a business that is research and development intensive and [deals like this] spread the costs over a much larger sales base. It is an economy of scale and productivity-driven rationalization.

GETTING BIGGER

The acquisition of Rohm and Haas’ agrochemicals division, which had sales of $331 million in 2000, will boost Dow AgroSciences’ annual sales to $3 billion, making it the world’s fifth largest agrochemical concern. Rohm and Haas was the 15th largest firm.

Under terms of the agreement, Dow AgroSciences will acquire Rohm and Haas’ fungicide, insecticide and herbicide lines, trademarks, and licenses to all agricultural uses of its biotechnology assets. Turf and ornamental products included in the deal are Dimension, Eagle, Fore and Dihane fungicides and Goul and Kerb herbicides. The transaction is expected to close in the second quarter of 2001.

“These product lines complement our portfolio by adding high performance, brand name products for specialty crops as well as turf and ornamental businesses around the world,” said A. Charles Fischer, president and CEO of Dow AgroSciences.

ROHM AND HAAS PULLS OUT

The transaction also marks the end of Rohm and Haas’ 70-year run in the agrochemicals business.

“This is a strategic decision,” said George Bochanski, a spokesman for Rohm and Haas. “Over the last 20 years, agrochemicals has been a growing business, but as a percentage of total sales its numbers have been slipping. On top of that we have made significant investments in other areas of chemistry, primarily electronic materials and polymers.

“We realized that we would have to make a significant investment in agrochemicals,” he added. “That was an investment that we were not prepared to make.”

NEW CHEMISTRY

Syngenta rolls out Touchdown Pro, takes on Roundup

By ANDREW OBERBECK

GREENSBORO, N.C. — Syngenta has rolled out a patented new formulation of glyphosate that is aimed squarely at Monsanto’s Roundup herbicide. The company claims that the non-selective, foliar systemic herbicide utilizes a diammonium salt of glyphosate that allows for faster and more complete penetration and absorption of the herbicide. Due to previous patent restrictions, this is the first year that Syngenta has been able to sell Touchdown Pro in non-agricultural markets.

“The adjuvants in the formulation allow for the increased effectiveness,” said David Ross, Ph.D. “The adjuvants don’t cause injury to the plant, allowing cells on the plant surface to fully uptake the herbicide and translocate it more effectively.

Parkway introduces Neo-Tec bio-nematicide

By ANDREW OBERBECK

HOUSTON — Parkway Research has introduced a bio-pesticide that provides preventive control of nematodes. Neo-Tec’s active ingredient, plant extract GC20, is a combination of oak, sumac, mango and cactus extracts. It acts as a barrier between turf roots and nematode activity.

“Whenever a plant grows it releases extracts through its roots that generate bacterial activity but also act as a signaling device for nematodes,” said Neo-Tec marketing manager Derek Little. “We put these extracts together with fatty acids and as they spread out across the soil profile it blocks the nematode, making it harder for them to find the root of the plant that you are trying to protect.

APPLICATION AND TIMING

According to Little, Neo-Tec works best as a preventive control.

“If you have an existing problem with nematodes, you will continue to have a problem,” he said. “Our product is not curative, so you will need to do a knock down to reduce the population before setting up a barrier with Neo-Tec. If used in concert with other products, you will continue to have a problem.”

BASF enters strobilurin fray with Insignia

By ANDREW OBERBECK

RALEIGH, N.C. — BASF has entered the strobilurin fungicide market with the introduction of Insignia. When the broad-spectrum fungicide comes to market in 2002, it will compete directly with both Bayer’s Compass and Syngenta’s Heritage products.

“This new class of fungicides are respiration inhibitors in fungal cells and act on a specific site of action within the fungus,” said Jeff Barnes, biology project leader for fungicides. “The result is a fungicide that is very active at low rates in turfgrass and is safe both to plants and animals.”

Insignia will control 15 diseases including brown patch, pythium blight, gray leaf

Continued on page 34
Bayer’s sales top $10 billion

PITTSBURGH — Bayer Corporation’s sales climbed 13.6 percent in 2000, topping the $10 billion mark for the first time. The growth is a result of the successful integration of recent acquisitions and the added capacity and efficiencies Bayer is realizing through its 10-year capital investment initiative. Among last year’s acquisitions was Bayer’s purchase of Compass, a strobilurin turfgrass fungicide, from Syngenta.

“Our cost savings efforts and our capital investment program paid strong dividends in 2000, helping us increase sales and remain profitable despite rising energy and raw materials costs,” said Helge H. Wehmeier, president and CEO. “Bayer is also harnessing e-commerce to lower its procurement costs, streamline order processing and customer service and better manage customer relationships.”

Bayer’s share of the agrochemicals market is around $2.3 billion making it the sixth-largest player in the industry.

— Staff reports

Neo-Tec

Continued from page 32

with traditional nematode controls it will reduce the possibility that nematodes become resistant to traditional nematicides.”

Timing is also critical when applying Neo-Tec.

“Plants are most vulnerable when they undergo periods of rapid growth,” said Little. “For example, it should be applied before grass comes out of dormancy, before fertilizing with a phosphorous fertilizer or before aerating. Depending upon cultural practices, it should be applied every eight weeks.”

PRODUCT DEVELOPMENT

Neo-Tec was developed from a biostimulant that was sold into agricultural markets in South and Central America. The plant extracts were used to build up soil structure because they cause cell division in certain beneficial bacteria in the soil, increasing the plant’s ability to absorb nutrients from the root zone.

“We found that the extracts also had an effect on nematodes and that if we added a fatty acid as a surfactant it would act as a nematode-control product,” said Little.

Since this is the first time the product has been used in the United States, Parkway is continuing to do turf research with the product. “We are building the research right now,” Little said.

“But we are treating nematodes, not plants, so we are confident that it will work just as well on turf as it does on bananas.”

Howard Fertilizer develops alternative mole cricket control

ORLANDO, Fla. — Howard Fertilizer, one of the Southeast’s largest manufacturers of custom-blended fertilizers, has developed Turf Pride Delta GC Plus Fertilizer as an alternative insecticide for controlling mole crickets.

Turf Pride Delta GC Plus Fertilizer is a combination fertilizer with insecticide for golf courses and sod farms. Unlike other mole cricket treatments, it’s an environmentally safe alternative. Created by Aventis Environmental Science, Delta GC is a pyrethroid, a synthetic version of pyrethrum. Pyrethrum is a naturally occurring insecticide produced by chrysanthemum plants. Not only is it effective in controlling mole crickets, it also controls numerous other insects, such as sod webworms, ants and chinch bugs.

The product is less expensive than other treatments, works effectively in low doses and does not smell or stain. Its irregularly shaped granules dissolve quickly, leaving almost no particles to be picked up by birds and other species.

“Howard Fertilizer wanted to offer an insecticide and fertilizer that helps golf courses control mole crickets and be more environmentally safe,” said James Brown, president of Howard Fertilizer. “We also wanted to offer a treatment to golf courses that could save them time and money.”

YOU CAN’T COVER UP POOR PRE-STRESS CONDITIONING

Prevent moisture stress before it starts with Cascade® Plus

Are you painting yourself into a corner with inadequate pre-stress conditioning? Then use Cascade Plus and keep moisture stress from undoing all of your hard work. Cascade Plus moves water deeper and faster into the soil profile for a longer period of time, resulting in larger, healthier root systems that are better able to survive seasonal stress conditions. In fact, independent university research showed that untreated hydrophobic soils required more than twice as much irrigation to reach comparable volumetric water content levels as Cascade Plus treated soil. And a single application regime of Cascade Plus has been proven to reduce the effects of Localized Dry Spot for 4 to 6 months.

Use Cascade Plus and get longer lasting improvements in turf color, quality and stress tolerance. And that means you’ll have nothing to cover up.

Call 800-323-6280 for more information, or for a Cascade Plus distributor near you.

Touchdown Pro to rival Roundup

Continued from page 32

[traditional] glyphosate you see an effect in 10 to 14 days. With our formulation you will see effects a couple of days sooner and the consistency of control will be improved.”

The corn-based surfactants assist in wetting the leaf surface and neutralizing positively charged calcium and magnesium ions that can tie up glyphosate, rendering it unavailable for uptake into the plant. The formulation also enhances the translocation of the herbicide through the weed’s vascular tissue to the shoots, roots and rhizomes. Diammonium salt also has no odor.

USE ON THE COURSE

Just like Roundup, Touchdown Pro is most likely to be used in spot backpack applications for control of weeds and as a method of killing off areas of old turf. “The product is perfect for renovation of fairways,” said Ross. “Since it has no residual activity you could come in and seed a fairway seven days after an application.”

The product can also be used in the wintertime to control weeds on Bermudagrass or zoysiagrass fairways. “You can use the product any time the plant is growing,” he said. “But we have a stronger application rate that will work for getting perennial weed control during the winter.”

Cost and application rates per acre will be similar to Roundup, said Ross. The product is currently registered in most states and full registration is expected this spring.

Aqua-Aid to develop Aquifer, a new choice in soil surfactants.

Aquifer produces and maintains an omni directional flow of applied irrigation and/or natural rain water. Aquifer’s exceptionally unique characteristic of producing downward and lateral movement of water (omni directional) provides a uniform moisture profile throughout the soil structure for up to 45 days.

This allows not only water, but also chemicals and nutrients to be distributed evenly throughout the root zone. The end result is dramatically less summer stress, reduced wilt, less localized dry spots and improved re-wetting capability.

Aquifer is one of three proven soil surfactants that Aqua-Aid offers. Each formulation is superior in its specific design as a penetrant and/or omni directional surfactant. Aqua-Aid surfactant products will not burn when applied at the recommended rates.

All Aqua-Aid products come with a 100% money back guarantee.

For more information on Aqua-Aid’s soil management program for you and your turf, call or write:

BASF’s Insignia

Continued from page 32

spot, summer patch and snow mold.

In addition, Insignia will have significantly more activity on certain diseases, said Barnes. “It will have improved control on pythium blight, gray leaf and dollar spot and it can be used at extended intervals,” he said. “It can also be used curatively once disease has already appeared and has a higher level of general activity on some of these fungi compared to other products.”

Insignia also offers longer periods of control and provides control at rates two to 10 times less than those for conventional fungicides.

PREVENTING RESISTANCE

Insignia will be used primarily as a preventive application.

“IT will have improved control on pythium blight, gray leaf and dollar spot.”

— Jeff Barnes

“This gives the greatest amount of control,” said Barnes. “Also, because strobilurins are single site inhibitors they are considered to be prone to resistance development so we have to be very careful on how we use them and how we time the application of materials to make sure we prevent resistance.”

EPA AND RESEARCH

The product is currently in the registration process with the Environmental Protection Agency and is expected to clear regulatory hurdles by the end of this year.

In the meantime, BASF continues to conduct university research across the country. “We have tested it in around 40 states,” said Barnes. “It will be useful on most every golf course across the range of cool and warm season grasses and will offer season-long control of turfgrass diseases from brown patch to pythium blight to snow mold.”
Dealers bear brunt of the used market risk

As the equipment manufacturers and dealers work to reduce risk for the superintendents buying used turf equipment, dealers and wholesalers are facing financial risks of their own.

"We are always scrambling for financing," said Edward Balulis, president of American Turf, a used-equipment company in Tampa, Fla. "You have to have a good line of credit because you are bidding on packages of $450,000 or more."

"Getting rid of the equipment is not hard," he said. "But buying it at a deal and then turning it around and making a good profit is harder."

High residuals are also a concern, according to said Gary Callahan, vice president of Boynton Beach, Fla.-based Kilpatrick Turf. "I am on a finance committee with Textron and one of the things we are looking at is fair market value," he said. "We have to put some criteria on the number of hours and the maintenance of the unit. If the equipment comes back in pieces and we still have a 25- or 30-percent residual on it, then the customer has to be responsible for refurbishing it or we are not obligated to take it back."

MORE COMING OFF LEASES

These concerns will loom larger as more and more equipment starts to come off leases. The "first true leases were not written in significant quantity until the late 1990s. Most were 48-month leases and those are starting to mature and coming home to roost," said William Robson, director of marketing for Textron Golf Turf and Specialty Products. "It is adding a whole new dimension to the business."

Manufacturers are quickly realizing that their ability to make new leases hinges on the ability of distributors and dealers to get rid of used equipment.

"We are forced to get smart fast," said Robson, chief marketing manager for Toro Co. "We are not where we want to be yet. Most of our distributors don't have the capacity to service used equipment. There are some longer-term issues that we are wrestling with to make it work in the long haul."

These issues are perplexing dealers.

"It is a little scary. What is going to happen in two years when all these units start coming off leases? Is it going to flood the market? Or will the demand still be there?" said Balulis. "I know someone that is sitting on $800,000 in used equipment from leases right now, and in 2003 he has $2.5 million coming in."

— Andrew Overbeck

Market for used turf equipment strong despite structural concerns

Continued from page 1

must be a strong market for used equipment. Compared to the secondary market for golf cars, the used turf equipment market is untested and fragmented.

"Golf cars have a very strong secondary market both at lower-end courses and other markets such as campgrounds and factories," said William Robson, director of marketing for Textron Golf Turf and Specialty Products. "With used turf equipment, the application is not as broad. But at the same time, the market has never been seen before where you have four-year-old high-quality diesel fairway mowers for sale."

"This is an emerging market," he added, "because for the first time there is a good supply of reasonable quality used equipment available for sale."

CREATING A MARKET

With the introduction of quality used equipment to the market, more courses are taking advantage of the lower prices.

"In the past five years, it has become a big business," said Gary Callahan, vice president of Boynton Beach, Fla.-based Kilpatrick Turf, a Textron distributor. "With a $30,000 piece of equipment you are looking at a $5,000 residual after three years and you can turn around and sell it for $12,000 to $14,000. That is not a bad deal for a course that cannot afford to buy new."

As a result, manufacturers are expanding their market reach.

"This allows us to reach markets that we have been unable to reach in the past," said Aaron Wetzel, John Deere's national sales manager for golf and turf. "There is a huge demand out there from courses that would like to have the ability to enhance the quality of the golf course but at a lower budget level."

In addition to selling into low-end courses, used equipment is also in high demand as grow-in equipment at new courses. Higher-end courses are also purchasing used equipment to fill gaps or back up existing equipment during the peak season. Buying used specialty equipment such as power bunker rakes and aerator is also especially popular.

"Maintenance equipment is expensive, and to maintain a course you need a lot of different pieces," said David McCoy, president of Capti Isles Golf, which operates three semi-private courses in Florida. "Golf is not as profitable as it used to be due to competition and the cost of keeping the course in shape. Between the three clubs, on average, we buy three used pieces of equipment each year."

In addition to markets in the United States, a large amount of used equipment also is finding its way overseas to courses in the Pacific Rim, South and Central America, and Europe. "The overseas market is big," said Edward Balulis, president of American Turf, a used-equipment concern in Tampa, Fla. "A new fairway unit that would sell for $40,000 here goes for as much as $90,000 overseas, because of the 40-to-60-percent import tax on new equipment. On used equipment, the tax is about 15 percent, so a used one sells for around $30,000."

REDUCING THE STIGMA

For the secondary market in the United States to flourish, however, customers must be comfortable with the quality of the equipment.

NEW PRODUCTS

Miltona's new leveling tool eases irrigation head and valve box installation

Miltona has introduced the Ground Zero Leveler, a common sense solution to installing sprinkler heads and valve boxes properly the first time. The unit allows all makes of boxes and heads to be clamped into place and held into a level position during installation.

This lets the installer have both hands free for back filling and tamping. The Ground Zero Leveler is constructed of durable aluminum. For more information, contact 800-456-4351 or www.miltona.com.

To ready with Powerful Groundmaster 4000-D

The Toro Co. has introduced the Groundmaster 4000-D, an 11-foot rotary mower that features three independent cutting decks allowing it to handle both wide open areas and trim areas. The unit is powered by a 58-hp turbocharged Kubota diesel engine. Full time, bidirectional 4-wheel drive delivers excellent traction and hill climbing ability. For more information, contact 952-888-8801 or www.toro.com.

There is a certain amount of stigma associated with used equipment," said Wetzel. "To gain customer confidence we tie a one-year warranty to John Deere ProConditioned equipment."

John Deere has instituted a three-level system that rates each piece of used equipment. ProConditioned equipment represents the top of the line used equipment.

"ProConditioned equipment is fully serviced and comes out in pretty much new condition," said Turner Revel, owner of Revel Tractor Co. in Raleigh, N.C., who sold close to 300 ProConditioned units last year. "We make sure that there is no excessive wear on the machine; everything is looked over. We consider it remanufactured."

Creating a comfort level among superintendents, however, may vary on a regional basis, said Textron's Robson.

"Superintendents will compare notes on their experiences," he said. "I would not be surprised if the comfort levels were regional based, upon experiences with dealers or the condition of the products coming off leases."

BUYERS BEWARE

Indeed, with the market growing, there are more reputable companies entering the business, cautioned Greg Wright, president of Statewide Turf Equipment in Sarasota, Fla. "You need to know who you are dealing with," he said. "There are a lot of companies that are getting in and out of the market right now that are just treading the market up. McCrory agreed. "You need to have a good mechanic and go see the piece of equipment," he said. "Don't buy it sight unseen. Make sure that the company is reputable and that they will stand behind the equipment. And talk to others who have bought from them."
off the sidelines," Lockridge said. "They are currently at about nine. People will jump back in when they perceive that we've hit bottom. But if multiples remain high, that means acquisition activity will be low, which will affect what we're able to do."

Nekoroski is aware that buyers are looking to bottom feed, but flexibility may be the best approach, he said. "Some of the more astute guys are jumping in now, saying that if they wait for a 25-percent drop, they might let three great deals go right under their noses."

He added that Bank of America abandoned the golf market because of overbuilding or any other specific concern. "The reason they cut the cord was at a much higher level, over global and economic issues," he said. "They saw the economy starting to waver, and they decided to cut the more risky portfolios or those perceived as risky."

In Nekoroski's view, Heller will be a solid financial partner for golf borrowers. "This is a great company," he allowed. "I've been very impressed with them in the short time I've been here."

The new unit is off to a quick start. "We've hit the ground running," said Nekoroski, who was already reviewing five or six proposals a few weeks after joining the firm. "The deals are out there."
Golf course construction firm with projects nationwide seeks qualified SHAPERS, FOREMEN, SUPERVISORS, LEAD MEN, IRRIGATION SUPERINTENDENTS and INSTALLERS. Competitive wages & benefits. Send resumes to: Environmental Golf 24121 Ventura Blvd, Calabasas, CA 91302 Fax: 818-391-3012 www.envgolf.com

ATTENTION: GOLF COURSE PROFESSIONALS Peerless Golf, Inc. of La Quinta, CA is currently accepting applications for all positions in golf course construction. We are looking for the best and brightest in the industry. People that have attitudes, abilities and ethics without peer. Tired of cross-country travel, six and seven day weeks or feeling unappreciated? You don’t have to! Our company is centrally located in the southwestern U.S., an area of impressive growth and opportunity with year round work. We set the highest standards for our employees and ourselves in order to provide superior workmanship and value to our clients. Our goal is to reward excellence by setting the standard for pay and benefits. We also provide the most advanced technology and training in the industry so that every employee has the best resources available. After all, your success is our success. So, if you are ready to relocate to the beautiful southwest, strive everyday to be the best, and receive the pay, benefits and respect that come with it, please send me your information.

Send or fax resume and work experience to: Chris Eidler c/o Peerless Golf, Inc. 78-060 Calle Estado, Suite #19 P.O. Box 611 La Quinta, CA 92253 Fax: (760) 564-3475

DOMESTIC AND INTERNATIONAL SEMA Golf is currently seeking qualified project superintendents, shapers, finish operators, and irrigation supervisors for both domestic and international assignments. Superintendents should possess some computer skills (Excel, Word, Projects). Irrigation supervisors should have a minimum of 3 projects as foreman or assistant. Mail or fax resume to: Bob Trueblood Vice-President SEMA Golf LLC 7580 East Gray Rd, Ste. 102 Scottsdale, AZ 85260 Fax: (480) 951-4081 E-mail: btsemagolf@aol.com

COVER MORE TERRITORY WITHOUT LEAVING TRACKS BEHIND.

Introducing the industry's lightest 7-gang mowers. Weighing in at roughly 750 pounds less than other 7-gang mowers, the Jacobsen LF-4675 and LF-4677 models are the lightest available. Plus, you get a legendary Jake cut that stretches across nearly 140 inches — about 40% wider than with a 5-gang mower. While these 7-gangs may be new, their 22-inch cutting reels and chassis are not.

In fact, both models are built on the same time-tested chassis as our popular LF-3400 and LF-3800 fairway mowers, so you'll get the same reliable performance. Not to mention, those fairways will be cross-cut in no time — without the worry of leaving tire tracks behind. For more information or a free demonstration, call 1-888-922-TURF or visit www.ttcsp.textron.com.
