A lot of things can happen in seven years—but *Poa annua* in my PennLinks is not one of them.

"For one, I was a younger man when I was grow-in superintendent at the OGA Members Course at Tukwila. Now, I'm married, have two dogs, a cast on my foot, our course has a beautiful new clubhouse, and we've had more than 300,000 rounds played on our PennLinks greens since we opened in August, 1984.

Our crew has managed to control *Poa annua* in our greens even though our public course is surrounded with hazelnut orchards where annual bluegrass thrives under the canopy of trees. To start with, PennLinks is a strong variety with good recovery from daily scars and wounds. When managed consistently with a balanced fertility program, and by aerifying in late May and mid-September—after *Poa annua* backs off the seeding stage—we can keep the nuisance grass in check. We've observed that alternative spikes don't disturb the putting surface, thus providing and ideal seedbed like steel spikes will. When *Poa annua* does occur in our greens, crew members remove the individual plants with tools we've adapted for the job; like a sharpened screwdriver, weed cutter, and a plugger for stubborn plants. Collars are the buffer between the surrounds and the greens, and have some *Poa annua* growing in them. I plan to re-sod the collars this year to start afresh and stop the threat of encroachment.

We're open year 'round, and have consistently posted more than 44,000 rounds per year for the last seven years. Our PennLinks greens are cut at 0.110 to 0.115" in the summer, and raised to 0.135" in the winter. We strive to maintain country club standards with less than a country club budget.

I may not look as young as I did seven years ago, but our PennLinks greens do. Now if I could get rid of this cast and control those geese, all would be well."

Kirk Kundrick, Superintendent on 14th green
OGA Members Course at Tukwila

Particular About Your Fairways?

For those who think their fairways can never be too clean, we submit our B Series Lightweight Fairway Mowers and our Fairway Tender Conditioners (FTCs). Just by putting FTCs on our 3215B, 3235B, or our new 3225B, you'll discover what clean really means. Grass stands up for an even, clean cut and a true playing surface. And the rear roller power brush finishes the job up right by removing built-up material as well as dispersing any leftover clippings. You'll also find an improved yoke and ball joints for better grass collecting; and an electric fan drive for improved noise levels and engine cooling.

Call your local John Deere Golf & Turf Distributor or 1-800-537-8233 for a demonstration. Nothing Runs Like a Deere®
Every blade of grass depends on the soil beneath it. On the soil microbes that feed it. And nothing provides food and energy to soil microbes like Nitroform® ureaform. It releases the right amount at the right time. Only when grass needs it.

The controlled release of Nitroform gives you six months or more of turf-growing benefits and even longer-lasting payoffs for your soil. Nitroform fights the effects of heat, traffic and drought. It helps develop roots and reduce thatch. Have your fertilizer supplier make Nitroform the foundation of your fertilizer program.

Your course is only as good as its foundation.

Ask the Expert. Go to our Web site at www.nugrotech.com. Bob Staib, recognized for his knowledge in specialty nitrogen fertilizers, will answer your turf or specialty crop questions by e-mail.
