NEWPORT COAST, Calif. — Encompassing 450 acres of prime Newport coastline, Pelican Hill Golf Club is an upscale, daily-fee resort with a Mediterranean flair. The 36-hole facility provides vistas across two championship layouts.

"Whether you are standing over a sharply breaking 30 foot putt with the sound of the Pacific Ocean crashing in the background, or faced with a 200-plus yard forced carry over a deep canyon, Pelican Hill offers thrills for all golfers," said superintendent Steve Thomas.

The Ocean South layout here was the first course to be completed. Opened in 1991, the course stretches to 6,634 yards with narrow fairways. The South course winds through terraced canyons and skirts ocean cliff edges before finishing on a very challenging par 4. Crossing the same canyon twice, this final hole is aptly named Double Cross.

The Ocean North course was opened for play in early 1994. Unlike the South course, the North sits atop ridges with views of Newport Beach, Catalina Island, and the surrounding coastline are worth the steep green fees, according to Thomas.

"Hitting the wide fairways is the easiest part of playing this course as approach shots and putting on hard-to-read greens provide more of the challenge," Thomas said. "The nice subtropical weather we experience here lends itself to a year round operation," he continued. "Our greens are mowed 364 days a year [the course is closed on Christmas]. The expectations of our clientele necessitate a high level of detail work on a daily basis."

GOING TO CALIFORNIA

Thomas has worked on golf courses since 1990. He spent three years at the Wakefield Valley Golf Club in Westminster, Md. "My boss at the time, Gary Angell, inspired me to consider a career in the golf course industry. I thought he was crazy," said Thomas. "The next year, in 1994, I started the two-year Turfgrass Management program at the University of Maryland."

Also in 1994, Thomas was hired at Congressional Country Club in Bethesda, Md., where he had the opportunity to work under the leadership of superintendent Paul Latshaw.

"Mr. Latshaw's forte has always been tournament preparations," said Thomas. At the club, Thomas played an integral role in both the 1995 U.S. Senior Open and the 1997 U.S. Open championships.

Thomas' tournament preparation experience under Latshaw continued when he went to The Riviera Country Club in Los Angeles to help him prepare for the 1998 U.S. Senior Open.

"Moving to California and working at the Riviera opened many doors for me," said Thomas. "We had only seven months to prepare the run-down and neglected course for a major golf championship, but we came through with flying colors."

MAINTENANCE BUILDING(S):

In April 2000, Thomas received his first superintendent position working with a staff of 35 people at Oak Creek Golf Club – an 18-hole, Tom Fazio-designed course in Irvine, Calif. Last year in October, Thomas signed on as the director of agronomy here at the 36-hole Tom Fazio-designed Pelican Hill. He continues to oversee the

Volunteer ‘regulators’ maintain private golf course at Dinosaur Dunes in western Kansas

BY JOEL JOYNER

SHIELDS, Kan. — "It’s unlike anything you have ever seen before," said Greg Strong, volunteer superintendent and one of the "regulators" here at the private Dinosaur Dunes Golf Club.

The course is unique indeed. Dinosaur Dunes is an 18-hole, 3,413-yard golf course located within the Cat House Outdoor Recreation facility in western Kansas. The owner, Clayton "Cat" Davis, designed and built the layout in 1988 along with the owner of the local John Deere dealership, David Kuhlman.

"We went out on the property with a case of beer and did all of the design work out in the field," said Davis. "I had some volunteers with me who helped with the construction work, and we built the course to our own standards. We’ve just continued to make changes over the years such as add bunkers, move tees around, and make changes to the design as we went."

Davis used to maintain the course himself with the assistance of some employees at the recreation facility. As other priorities at the recreation area and his cattle feed business required more of his attention, Davis has allowed golfers who are interested to volunteer their time and tools to maintain and make improvements at the course.

Superintendent Strong has volunteered at the course for about six years, and quite heavily during the past two years. "All of the volunteers are members of the club, and most are very active golfers that are out golfing every weekend. Last year, I got in 219 rounds myself," said Strong.

All of the greens at the course are either buffalo grass or Bermudagrass. "We use a John Deere grooming mower on greens, fairways and roughs," Strong said.

"Five of our volunteers, or regulators as we like to call them, are trained on the mowers. The rest bring their own pruning saws, chainsaws, rakes, trimmers, blowers and whatever else is needed and do the work that is set out in the yearly planner. Sometimes we purchase the seed and tools needed ourselves." The recreation area sits on about 1,100 acres. "It’s one of the greatest deals in golf I’ve ever found," said Strong. "Membership to the recreation area is only $125 per year. That entitles you, basically, to unlimited golf. There are no set tee times. If you are the guy standing on the tee box, it’s your tee time."

Most of the regulators are weekend warriors, but Strong tries to be out on the course about every evening during the peak playing season. "There are a couple of members who even carry pruning saws in their golf bags," Strong said. "They’ll go out and play 18 holes, and then head back out to mow five or six holes."

Dinosaur Dunes, you can play nearly any course in the world," he said. "There are drops in elevation up to 100 feet in some places. It’s more of a target golf course, but none of the holes are very long."

The only par 5 on the course is 414 yards. "A lot of our par 4s are in the 246 yards to 287 yards range," explained Strong. "But if you are off target, you’re off a cliff or in a plowed field. In the summer time, there are silage crops that...

Reduce turnover with hiring plan

Continued from page 8

objective here is to sift through the many applicants and identify those most suited for the work using a best worker profile. A best worker profile identifies the qualities of your current workforce that makes them a successful team.

Many other superintendents find themselves faced with labor markets that are challenged by low unemployment, high housing costs, and few responses to the traditional methods of seasonal staffing. For those in a tough labor market, it is important to effectively compete for candidates that fit your best worker profile.

WORKING WITH NEW EMPLOYEES

After selecting the right individual, steps need to be taken to increase the odds of their success. It is critical to know how the position meets their needs. You need to know what brought the person to the job. This information will allow superintendents to better motivate the person and will help reduce turnover.

After the decision to hire and before communicating this news to the applicant, it is important to manage expectations. Share all the negative aspects of the job up front; it is important that they understand and accept that they will be doing manual labor, getting up early in the morning, working weekends, etc. Do not hire until you have clearly communicated the aspects of the work that have caused some to leave your operation. Rather than selling them on all the great aspects and hope they can handle the challenges, it is much wiser to undersell the positives and focus on gaining acceptance of the challenges.

lower toxicity levels.

Efforts to address wildlife and habitat management have been equally effective, with 89 percent choosing native plants when landscaping, as compared to 49 percent before joining the program. In addition, the average number of acres devoted to providing wildlife habitat increased by 50 percent – from 45 acres to 67 acres per course – on average.

All of these strides were taken without compromising the quality of the game itself, according to the study. Nearly 100 percent of courses surveyed reported increased or maintained golf quality and player satisfaction.

ROOM FOR IMPROVEMENT

Combined, the golf courses that responded to the survey provided 40,214 acres of wildlife habitat, an increase of nearly 10,000 acres due to program participation. However, there is more room for improvement in categories such as: improving spill containment for pesticide mixing and containment areas (64 percent); removing exotic invasive plants (56 percent); and installing a contained equipment wash-off area (45 percent).

We need to continue to work with courses to reduce runoff, employ BMPs [Best Management Practices] in the maintenance facility, and monitor water quality," said Jean Mackey, director of educational services at Audubon International.

The Audubon Cooperative Sanctuary Program for golf was launched in 1991 in conjunction with the United States Golf Association (USGA). The average course covers 150 acres, with just 30 percent generally used for greens, tees, fairways and buildings – leaving 70 percent as rough, woods, water, and other habitats, according to the USGA.

"Golf courses offer a unique open space in landscape for wildlife to exist and thrive. Ongoing stewardship actions and education efforts lead to habitat protection, natural resource protection, and a reduction in the overall impact of golf management practices on the surrounding ecosystem," said Joellen Zeh, staff ecologist with Audubon International.
