Syngenta partners with Pursell Farms

FAYETTEVILLE, Ala. — Pursell Technologies Inc. has added another industry sponsor to its budding 18-hole research and demonstration golf course. FarmLinks at Pursell Farms is set to open in early June.

Pursell Technologies developed FarmLinks to provide the industry with an outdoor working laboratory to test new products and maintenance practices that will benefit the industry.

"Syngenta will be using the FarmLinks facility to test products and management solutions," said Joe DiPaola, Ph.D., golf market manager for Syngenta. "We’ll be supplying pest control products for the course and working with the FarmLinks staff to demonstrate our solutions approach to turf problems."

Fayetteville, Ala. — Pursell Technologies Inc. has added another industry sponsor to its budding 18-hole research and demonstration golf course. FarmLinks at Pursell Farms is set to open in early June.

Pursell Technologies developed FarmLinks to provide the industry with an outdoor working laboratory to test new products and maintenance practices that will benefit the industry.

"Pursell Technologies is looking to add another technology partner with Syngenta," said Joe DiPaola, Ph.D., golf market manager for Syngenta. "We’ll be supplying pest control products for the course and working with the FarmLinks staff to demonstrate our solutions approach to turf problems."

FarmLinks at Pursell Farms is the venue for the PTI Tour program. Each year, Pursell Technologies brings in more than 1,000 professionals from the golf, turf and horticulture industries to visit Pursell Farms for two to three days of learning, recreation and relaxation. FarmLinks is designed to showcase 18 holes of experiments to tour attendees, where they can learn about products, equipment and turf management practices.

Lesco expanding

Centers and 30 Lesco Stores-on-Wheels with regional stocking assortments and improved transportation services.

The company is also opening new Service Centers, which are expected to generate approximately $10 million of net sales in 2003, bringing the total net sales increase to a range of 6 to 8 percent. Lesco opened a new Service Center in Haverhill, Mass., on April 2, the first of 25 new Service Centers. We should also anticipate approximately $10 million of net sales in 2003, bringing the total net sales increase to a range of 6 to 8 percent. Lesco opened a new Service Center in Haverhill, Mass., on April 2, the first of 25 new Service Centers. We should also anticipate approximately $10 million of net sales in 2003, bringing the total net sales increase to a range of 6 to 8 percent.

In order to optimize the long-term value inherent in the Lesco model, we have opened additional Service Centers. We should always allow our group of stores entering their third year of operation," said DiMino. "In the third year stores become profitable and defray the costs of new stores. Unfortunately, Lesco has not opened new stores since 1998 and for the next two years we will have to pay for store openings through the sacrifice of short-term earnings."

BASF set to grow

Continued from page 1

to tie these two divisions back together and have one specialty group."

Briggs has already made inroads by integrating the mostly post-patent chemistry from TopPro into the BASF product line. The turf and ornamental products include Curasan and Propiconazole fungicides, Vantage and Basagran herbicides and Amdro Pro fire ant bait.

While work on selecting which products will be pulled forward is ongoing, Briggs said the new portfolio will be comprehensive. BASF is strong in herbicides and TopPro has one of the broadest turf fungicide portfolios," he said. "BASF is awaiting two new fungicides [Insignia and Emerald]. So if you take what BASF has coming in 2003, and the post-patent chemistry from TopPro, we will have the market needs covered."

According to Briggs, approval from the Environmental Protection Agency is expected on Insignia and Emerald by mid-summer. The products will likely not be available until the 2004 season. Another significant boost to BASF's product offering is slated to come with Bayer ES's divestiture of its fipronil products, which include insecticides Chipco Choice, Top Choice and Firestar. Briggs said the deal would allow the licensing back of the products, including the trade names, to Bayer ES. The U.S. Federal Trade Commission approved the deal Feb. 14, and at press time both parties were waiting to hear from the European Commission.

"Fipronil will really complete the line," said Briggs. "It is a very effective insecticide." I
