Anachronism snafu
I just had a look at the water quality article from Carmen Magro ("Drop by drop," February 2012). Either he or your editors made an error in one of the most important water quality parameters...

I'm sure I make plenty of errors, too, but I can't help but speak up. That particular error of misspelling sodium adsorption ratio and by so doing confusing the meaning is a particular concern of mine. I don't like claiming that TDS is total dissolved salts, either, for that should be total dissolved solids. I don't pick at every little error, but the SAR one is inexcusable and I wish it would never occur again.

Micah Woods, Ph.D.
Chief scientist
Asian Turfgrass Center

Editor's Note: We don’t like errors, either. We forwarded Micah’s concerns to Carmen who readily admitted he was in error. SAR should have been “sodium adsorption ratio” and we should have been more clear in his discussion of “total dissolved solids” (TDS).

In praise of the app
The new app is excellent. I didn’t check it out until after the GIS show, but I am impressed. GCI definitely has become the most relevant, informative and best all around of the industry’s publications.

Greg Cormier, CGCS
Director of golf course operations
Nashawtuc Country Club
Concord, Mass.

Kudos
Congratulations on the hard work you put into GCI. I personally think it’s the best publication in the business. GCI is the one magazine I still read instead of checking all the digital outlets at my disposal. I really enjoy your unique perspective on our business and find your contributors are very well informed with their fingers on the pulse of the current climate in the industry. Keep up the quality work and thank you.
