Introducing a weather station you can't afford not to use.

Rain Bird® WS PRO LT.

The feature-packed, value-priced Rain Bird® WS PRO LT is designed to help eliminate the guesswork in determining accurate sprinkler run times. Sensors collect weather data used to calculate an ET value. Using this value, the central control system can automatically program run times without over- or under-watering. Features include:

- **Automatic ET Download with Optional ET Override** — Automatically use ET in calculating irrigation run times, or use only as a guide when selecting user-defined run times for an entire system or specific areas.
- **Weather Data Reports** — Run customized weather reports by the hour, day, week, month or year.
- **Easy Installation** — Eliminate the need for any wiring by selecting wireless communication and solar panels.

The Intelligent Use of Water.™ Weather stations are vital components of an irrigation system for maximizing efficiency.

“I saw myself as doing a pretty good job of managing water around the golf course, but now with this affordable option, I know I'll be doing an even better job of saving water, as well as reducing energy costs and wear and tear on my pumps.”

Bob Marshall, Superintendent
Skaneateles Country Club
Skaneateles, New York

Now, Snow Mold Control Without Root Pruning

Endorse™ fungicide, with its unique mode of action, provides foliar and translaminar systemic activity for superior control of Pink and Gray Snow Mold. Extensive research continues to show that Endorse and Spectra™ 90 WDG applied as a tank mix will provide excellent control for both Pink and Gray Snow Mold even under the harshest conditions. The combination of these two effective products not only provides excellent disease control, but also avoids the traditional root pruning often seen with applications of PCNB.

Cleary recommends that appropriate fungicides be applied prior to the application of the Snow Mold Program to ensure good hygiene (i.e. that the presence of fungal organisms are killed or greatly reduced.) Not only will Endorse + Spectra provide you with effective control, but also this combination is less expensive than many other programs recommended by competitors. These programs often contain combinations of three or more fungicides including PCNB, a significant root pruner.

The Endorse Advantage

Count on Cleary Chemical to provide superintendents with the most effective fungicides for Snow Mold control backed by more than 65 years of commitment to the industry. Endorse + Spectro – Your best insurance value for effective Pink & Gray Snow Mold control.

For more information about Cleary’s Solutions Programs, call 1-800-524-1662.

Golfers want one thing, a tee-time on a beautiful day on a beautiful course. We can't help with the weather, but we can help keep your course weed-free and looking great with the next generation of superior weed control - Millennium Ultra².

Specially formulated for golf courses, parks and playing fields, Millennium Ultra² is the premier herbicide for sports and recreation use. Millennium Ultra² is a premium blend of Clopyralid, Dicamba and 2,4-D that offers rapid response, awesome weed-killing power and incomparable clover control - often with just one application!

Zero weeds ... happy golfers - by any measure, Millennium Ultra² excels.

Millennium Ultra² is a registered trademark of Nufarm Americas Inc.
Good will. The industry has a lot of it. One of the unique aspects about the golf course management industry is the comradery among golf course superintendents and the brotherhood that exists among them. It’s a friendliness among competitors that I haven’t seen in other businesses.

Superintendents continuously use better products, methods and technologies to manage turf and their staffs better, as well as meet golfers’ expectations through the conditions of the courses they maintain. When someone finds something that works better or finds a better way to do something, he’s not shy about telling other superintendents what’s working for him or what isn’t. And there seems to be few trade secrets. Most golf course superintendents want their fellow professionals to excel at their jobs and advance within the industry.

Another example of this brotherhood is when superintendents give each other a helping hand when someone hosts a major tournament. With millions of people watching and thousands visiting a course for such a tournament, the superintendent wants the course to shine. Other superintendents want the course to shine, too. That’s why there are many superintendents and assistant superintendents from throughout the country that come to the course that’s hosting the tournament to volunteer their time and efforts to help a fellow superintendent. Many superintendents work behind the scenes to give one superintendent the limelight as professional golfers praise the conditions of such a well-maintained course. That’s not selfish.

Recently, late this summer and early fall, there was another example of superintendents’ care for each other after many well-maintained courses in Florida took a beating from Mother Nature. Four hurricanes—Charley, Frances, Ivan and Jeanne—tore through Florida and wreaked havoc, damaging some of the country’s most beautiful golf courses.

There are about 1,300 courses in the Sunshine State—the most golf courses per state, according to the National Golf Foundation—and 350 to 400 of them were damaged from the hurricanes. There have been estimates as much as $30 billion worth of overall damage in Florida. The cost of cleanup for some courses is between $800,000 and $1.1 billion. Mother Nature can be vicious, but who thought like this. Not only has she put a hurt on the physical conditions of these courses, but she’s also put a clamp on their revenue streams. The negative affects of the damage will last for the rest of the year and into next year for some of these courses. Owners must wonder when they’re going to wake up from this horrible nightmare.

Jeff Parsons, general manager of the Diamondback Golf Club in Haines City, estimates the hurricanes took out about 1,000 trees on the course and the cost to clean up and repair all the damage will be about $250,000 in machine and labor costs. Parsons expects the cleanup to take about a year. To help with the cleanup, Diamondback received help from members of a golf course maintenance crew in Georgia.

Randy Waldron, superintendent at the Golf Club of Georgia in Alpharetta, heard about golf courses sustaining hurricane damage in Florida and wanted to do something to help. So he contacted a friend, ChampionsGate Country Club superintendent Bobby Ellis, to see what he could do. Ellis referred him to Parsons, and Waldron sent one of his assistants, Steve Sisson, and some equipment to Diamondback.

Because Waldron and some of his staff are from Florida, they wanted to help out, especially a course that didn’t have a big budget. The course maintenance staff at the Golf Club of Georgia convinced a local supplier to donate a chain saw for Sisson to take with him, and the staff collected about $300 to pass along to Diamondback for a week while he was being paid by the Golf Club of Georgia.

Now that’s lending a helping hand. This is just one example of superintendents helping fellow superintendents during a crisis. I’m sure there are plenty more. But in this day and age of superintendents having to do more with less, it’s nice to know they’re willing to give other superintendents a helping hand at no cost and even chip in out of their own pockets. It all goes back to brotherhood.

Superintendents are lucky and should be thankful they’re in an industry that’s so helpful and kind. Many other industries, because of competition and budget pressures, are much more vicious—kind of like, well … Mother Nature at times.
TWENTY YEARS AND STRONGER THAN EVER.

RegalStar® has been the muscle behind turf management herbicide programs for over two decades now, with no sign that its ready to give up its top spot to any younger, weaker newcomers. RegalStar was born for this, created with a dual mode of action that, in twenty years, has never seen its equal. It eats broadleaf weeds, grasses and single herbicides for lunch. It doesn’t blink at weather. And it’s stubborn enough to stick around all season long on one application. Get RegalStar today.

Books

Golf greens book explores theories
Columbus, Ohio - Michael J. Hurdzan, Ph.D., of Hurdzan/Fry Golf Course Design recently wrote a new book, "Golf Greens: History, Design, and Construction." Hurdzan looks at the past 100 years of history and evolution of golf greens, how scientific investigations have influenced their construction, the intent of the golf course architect when designing a green, and how design and construction influence maintenance practices.

Through exploration of the history of golf greens, related design theories and future trends in the game, the book uncovers how modern golf green designs fit in with the history of the game. The book also looks at the strengths and weaknesses of construction methods, legal considerations and how to manage specific problems.

Hurdzan intended to make the book light reading for those mildly interested, but also to be an in-depth textbook for serious students of golf course design and maintenance. The book is available by calling 877/762-2974 or 614/457-9955.
