A wide-open wonder.
68" to 74". Right from your seat.
The reach to give you an edge.
Hills, meet Grip AWD.
It's a breakthrough.
Shift your expectations of what a rough mower can do. 15” of reach to the left and right. 68”–74” variable width of cut that can be adjusted right from the seat. And true all-wheel drive. The 7400 TerrainCut is a Houdini at mowing in tight spaces, and can handle whole zip codes when wide open. No wonder it doesn’t fit neatly into any previous equipment category box. Want to see one in action? Contact your local John Deere Golf distributor today.
Since the Beginning

Since the introduction of Penncross, superintendents around the world have come to trust Tee-2-Green and the Penn bents.

How many superintendents do you know with the Penn bents on their course?

DIGITAL LIBRARY
You can view last year's digital issues of Golf Course Industry any time you want on DVD. The digital library contains all the 2007 issues on one disc. The DVD is available at the online bookstore – www.golfcourseindustry.com/store.

EDITORIAL MISSION STATEMENT:
Golf Course Industry reports on and analyzes the business of maintaining golf courses, as well as the broader business of golf course management. This includes three main areas: agronomy, business management and career development as it relates to golf course superintendents and those managers responsible for maintaining a golf course as an important asset. Golf Course Industry shows superintendents what's possible, helps them understand why it's important and tells them how to take the next step.
A HEALTHIER YOU

You can’t turn on the tube, surf the Web or open a newspaper without reading or watching news about Americans trying to improve their health. Whether it’s eating right or exercising more, fitness gurus and journalists are talking constantly about people’s health – both mental and physical. Much like being “green,” a healthy lifestyle is trendy. Fattening foods are out, and organics are in. Also, many people talk a lot about wanting a better life/work balance. Golf course superintendents are no exception.

Reportedly, there are 13.4 million lost work days annually caused from stress, anxiety and depression in the United States. Common causes of stress include: employees, worry/anxiety, customer complaints, guilt, overwork, sleep deprivation, trauma/injury, physical and mental strain, bad diet, toxic exposure and overstimulation. Related to all of those, but more specific to the golf course management industry, are increased golfer/owner expectations, the economy, achieving more with fewer resources and growing shorter grass. Mix these factors with working long hours, spending a less-than-desired amount of time with family and dealing with irksome club members, and you have one strong concoction that pushes some superintendents to the brink of losing it.

Physiologically, in stressful situations, nonessential bodily functions shut down. Reactions can include: adrenaline increases, weight loss or gain, hunger, gastrointestinal issues, blood pressure increases, headaches, immune system deficiencies, decreased energy and libido levels, and diarrhea or constipation. Emotionally, stressed-out people can experience apathy, depression, irritability, anger, forgetfulness and detachment. Not pleasant.

So, how do you prevent from feeling that way? For some, it’s the old standbys – booze, tobacco and pills – which can calm nerves and help suppress the stresses of the day. However, even though these methods work in the short term, they’re not so good for the body long term, aren’t healthy and are becoming more taboo in society.

But there are better ways – although not as “fun” at times – to address stress and its symptoms. One way is to replenish nutrient deficiencies in the body by ingesting B-complex with vitamin C, antioxidants, zinc, magnesium, enzymes and electrolytes. Also, you can manage stress healthily by exercising, executing and organizing your priorities, napping, spending time with family, venting, getting a massage, and through hobbies such as reading, listening to music, etc.

One area of improving your health and dealing with stress that might be easiest for you is changing your eating habits. Healthy nutritional techniques include: decreasing the amount of caffeine and alcohol you ingest, controlling your blood sugar level, eating regularly, limiting fried foods, drinking more water, eating more fruits and vegetables, and taking magnesium, B-complex and a multivitamin.

Aside from nutritional health, try to reduce the number of hours you work per week – and I know you think it’s impossible. Delegate jobs to different members of your staff. One veteran superintendent once told me members don’t know if you work 70 hours a week or 60 hours. So it makes sense to focus on the aspects of the operation members notice most. The fewer hours you work on the course, the more you can spend with your family and improve that life/work balance we hear so much about.

Finally, for a good laugh, watch the movie “Office Space” and learn from character Peter Gibbons about how to relax and live a more carefree lifestyle. While the work environment in the movie is different than yours, it still correlates.

Now that I’ve suggested ways to improve your well-being, step outside, crack a beer, light a smoke and talk to the dog about how you’re going to start living a more healthy, stress-free life – without sending in your resignation. SCi

Triton™ is here.

Turf disease, on the other hand is leaving.
Chipco Triton is a new broad-spectrum fungicide that is descending on turf diseases everywhere. Now you'll be able to get rid of anthracnose, brown patch and dollar spot while keeping your turf healthy and green. Even better, when you combine Triton with other Bayer products containing StressGard, like Chipco Signature, you get unbeatable protection against the stress your golf course faces, even in the summer heat.

As always, you're Backed by Bayer. And that means our team of professionals is your team of professionals. All of our research and support is to ensure you have the most effective products available. Superior products and superior support - only from Bayer.
LEND A HELPING HAND

As professionals in the golf course industry, it's our duty to help educate others about environmental management and the preservation of the environment. As a proud member of the class C assistant superintendents committee of the Midwest Association of Golf Course Superintendents, our chapter has supported us to become involved in our industry and community. With most of us having a turf/horticulture background, providing support for a landscape project was the best choice. We chose to work with Habitat for Humanity. HFH is an international organization that helps communities everywhere and has built more than 225,000 homes worldwide. Let me tell you a bit about our project that started in 2007 in Aurora, Ill.

Last year, the Fox Valley Illinois chapter of HFH set a goal to provide four homes to needy families, who have an opportunity to put sweat equity into their future. Each family helps build its future residence and establishes equity in its home once completed. The home isn't free, but it's a way to improve people's lives and provide a stable platform to continue building a better life.

Knowing a need existed in our community, the assistants committee of the MAGCS, volunteered to provide the labor and landscaping for a house that was to be built by the HFH chapter. I was privileged to serve as the project coordinator in charge of organizing the donation and installation of the plant material.

First on the to-do list was find a landscape architect to prepare the site's landscape design. It needed to be someone who was familiar with local growing conditions and plants hardy to the area. We engaged the entire Midwest chapter and solicited members' help and expertise. Greg Martin of Martin Designs, Ltd., provided the landscape and planting plan for the project. Once Martin completed the design, it was time to locate the plant material. We spoke with the president of the MAGCS and our board of directors to come up with a solution that allowed multiple companies to donate sod and materials. We composed a letter that was sent to all the vendors in our local association. The letter also was posted on the association’s Web site. Any member could sign up to donate plant material, time or money.

The winter of 2007/2008 in the Chicagoland area was cold and long. When the weather broke this spring, we called the volunteers and companies to help out once more. The landscape plan called for various shrubs, groundcover, trees and flowers. We worked with the family to complete the landscape. The final step included smoothing the sod, adding mulch to the landscape beds and applying fertilizer.

As a volunteer, the joy I received from helping others was immeasurable. Working with soil, growing grass and maintaining turf are my passions. To be able to use this knowledge and the resources available to me is a small way to help others in my community. A little time and a lot of generosity from a bunch of dedicated people made it possible to turn dirt into a yard and a house into a home. I thank the volunteers who offered their help with this project. This philanthropic effort couldn't have been completed without the support of the MAGCS. Last, but certainly not least, I thank the vendors who provided the plant materials. Because of these fine folks and all of the volunteers, the project was a success.

The golf course maintenance profession has a great story to tell the public. HFH is one of many fine organizations to get involved with to help make our profession and our society a better place.
