LESS FERTILIZER.

LESS WATER.

LESS FUNGICIDE.

It's been over 10 years since Tee-2-Green introduced the Penn A's & G's — the high performance bentgrasses that look and putt great, need less maintenance and save money. We were ahead of the curve then, and today the A's and G's remain superior. They are specified by architects and used by superintendents more than any other bentgrass.

Do the Math.

Why Use Anything Else?

FEATURES

44 A TALE OF TWO COURSES
What happens to golf courses when they no longer serve up tee times? Many of these failed properties receive a second lease on life.

44 A COMMUNITY ASSET
Unable to meet the demands of running a nine-hole course, the Grant family, with their local government, converted their facility into a community park.

47 OUT OF LIMBO
A new ownership group resurrected the abandoned Rat River Golf Club by transforming fallow land into Maplewood Golf Club.

Q&A
44 CF0*
("Chief Fishing Officer")
Gary Grigg's journey through the industry has taken him from the potato fields to dozens of golf construction sites to the boardroom of one of the market's most successful superintendent-driven companies... and he hit a few trout streams along the way.

Turf Maintenance
54 ALTERNATIVES TO OVERSEEDING
Budget cuts and increased labor costs have made more superintendents wonder whether overseeding is the right choice.

Turf Management
58 TARGETING TOPDRESSING
While the jury is still out on its ability to suppress disease, topdressing can contribute to a healthier soil profile.

SMART IRRIGATION

S3 Editor's note
Mike Zawacki:
Water, water, everywhere

S4 Deep access
Providing users with more detailed data, Toro's recently released Lynx irrigation control system has begun to make waves.

S10 Sensing moisture
Superintendents monitor various areas of the course for signs of drought and make adjustments to the heads in areas that may be too dry or too wet.

S16 Irrigation issues
Erik Christiansen:
A salty option

S18 All wet
Correcting the problem of hydrophobic soils, superintendents utilize wetting agents to lower irrigation costs

BREAKING NEWS OFTEN COMES AT INCONVENIENT TIMES FOR THOSE OF US WHO ARE STILL IN THE BUSINESS OF PRINTING IT ON DEAD TREES AND ENTRUSTING IT TO THE PONY EXPRESS...ER, I MEAN U.S. POST OFFICE...TO DELIVER TO YOU. SO, ALL WE REALLY KNOW IS THAT THE BOARD WILL SOON OR LATER. WHAT KIND OF PERSON SHOULD THEY HIRE? WHO WILL DRIVE THE PROCESS WITHIN THE BOARD? WHAT WILL THE POLITICAL RAMIFICATIONS BE INSIDE AND OUTSIDE THE WALLS OF HEADQUARTERS?

HERE'S MY ANSWER: DON'T KNOW AND I REALLY DON'T CARE. WHEN WOODWARD'S RESIGNATION WAS ANNOUNCED, IT OCCURRED TO ME THAT THIS WAS THE FIRST "REAL" NEWS I'VE HEARD FROM GCSAA IN AGES. HONESTLY, THEY JUST HAVEN'T SEEMED TO HAVE DONE MUCH OF ANYTHING NEW IN YEARS. IN THEIR DEFENSE, THEY WERE BUSY MANAGING THROUGH AN INCONVENIENT TIME—JUST AS WE WERE READYING OURSELVES FOR THE 4TH OF JULY—AND THAT WE'LL HAVE SOMEONE NEW IN THE JOB SOONER OR LATER.

I'M NOT TRYING TO BE UNFAIR, BUT I AM A PROFESSIONAL PAIN IN THE ASS AND HE PUT TO WOODWARD. STAFF DISSENSION AND DOWNSIZING—"NASTY, BRUTISH AND SHORT." HIS TWO YEARS AT THE GCSAA IS INCREASINGLY IRRELEVANT TO THE AVERAGE SUPERINTENDENT—and therefore to our EDITORIAL INTERESTS—THOSE DAYS. YES, THEY RUN A FINE EDUCATION PROGRAM. YES, THE SHOW IS AN IMPORTANT, ALTHOUGH SMALLER, PLATFORM FOR THE INDUSTRY. BUT DOES ANYTHING ELSE THE GCSAA DOES OR SAYS REALLY MEAN A WHOLE LOT TO YOUR DAY-TO-DAY LIFE? GCI

New Ecologic SG’s organic Ecklonia maxima Kelp formula naturally increases root volume and root tips.

- Increases turf's natural ability to uptake moisture and nutrients
- Improves turf's natural resistance to the stresses of drought, nutrient deficiency and salinity
- Can reduce the amount of traditional fertilizer applied
- Saves time and money: No extra application steps necessary - in most cases SG can be co-applied with existing fertigation programs

Waiting for things to even out

I read with interest your May 2010 cover story “In Munis We Trust” (page 20). As co-owner of a family-owned, 18-hole public golf course in Western Massachusetts, established by my parents in 1963, I feel more than qualified to weigh in on this subject. We have six municipal golf courses within a 20-mile radius of our area, each in direct competition with us. My dad built our golf course for the average golfer, with a business philosophy of offering a quality product at a fair price. Our customer base is the average player, providing what Dennis Lyon calls “accessible, affordable, quality golf.”

Recently, we have seen some of our local municipals receive benefits that go beyond tax breaks. In 2007 we saw the Ledges Golf Course in South Hadley receive a nearly $250,000 “Urban Parks” grant from the state to build its new clubhouse. Several years ago, Franconia Golf Course in Springfield received a $1 million state grant and a matching bond from the city to install an irrigation system. These are just some of the most egregious examples of what we have to compete against. It sure would be nice to have access to some of these free gifts out here in the private sector.

Mr. Lyon sure was right when he said there are no level playing fields when it comes to competition between golf courses. However, out here in Western Massachusetts we’re still waiting for things to even out.

East Mountain Country Club
Westfield, Mass.

Your point

In your article “In Munis We Trust” (May 2010, page 20) you missed a couple of points.

• Muni prices are not break-even prices in most cases; the tax payers foot the bills and have no idea how much they are.
• Muni courses pay no real estate taxes. True.
• Muni courses pay no payroll taxes. True, who does?
• Muni courses pay no insurance. True, who does?
• Muni courses don’t pay labor. True, who does?
• Muni courses take away tax base and add to the taxes of private business. True.
• Muni courses can buy equipment at government contract prices. True.

The point here is that muni courses charge way below what the product is worth and they are driving private business out of business. There may not be a level playing field, however that does not mean that government inefficiency, cronyism, corruption, etc., should be running us out of business.

THE NATURAL CHOICE

A summer stress breakthrough.

Echo® ETQ™ Turf Fungicide combines Echo chlorothalonil with an exceptional pigment additive. While the ETQ additive minimizes the factors contributing to turfgrass stress, Echo prevents dollar spot, brown patch, leaf spot, gray leaf spot, anthracnose and other diseases. What results is remarkable disease control accompanied by improved turf color, strength, density and consistency. All at a fairway-friendly price and without resistance issues. Relieve summer stress. Make Echo ETQ Turf Fungicide your go-to product for disease control and enhanced turf quality.

ON THE GREEN, "ALMOST" DOESN'T CUT IT.

Jacobsen® Eclipse® 322: the industry's only 100% hydraulic-free riding greens mower.

When we say no hydraulics, we mean it. The Jacobsen Eclipse 322 provides greener operations and less maintenance to lower operating costs by up to 86%. Combined with programmable settings and individual reel control, you're assured perfectly manicured greens every single time. **Determine your course savings using our cost calculator at www.Eclipse322.com.**

An easy target

I have a comment about Charlie Birney's Pro/Con article ("A Cautionary Tale," May 2010, page 28). I've been around golf long before the boom that brought so many business owners looking for a quick buck. The result: owners who knew little about golf wanted the municipalities - who were there for many years and who provide recreation for the less fortunate who want to play - to go away. It was all about not wanting competition. The question became: "Why is government in golf?" And the answer: "Because the private sector will only do it if it makes money."

Parks & Recreation departments are not revenue producers – they are tax supported. The essence of this is to provide recreation for the masses. Ice arenas, tennis courts and playgrounds are not being built by the private sector for similar reasons. Are some municipal courses losing money? Yes. Many are not making it because too many courses were built around them. In the Minneapolis/St. Paul area there were more than 110 courses added to the metropolitan area since 1970 (2003 Clasp Report by the NGF). Think about capacity and dividing the pie. Who is the easy target to go away? No one addresses who built all this oversupply.

Next, we have the courses built for land sale with walk-away realtors. They could care less about the cost of golf or how to run a facility. But the older courses are left with increased green fees that hurt everyone. It helped destroy the game we all loved. Now we reap what was sown by strictly profit motivations. There is a place for government run course where private enterprise cannot afford to provide for the amenity, especially in urban centers.

Braemar Golf Course
Edina, Minn.

Hearing the message

Just read Pat Jones' April 2010 column ("Huh?" pg 58) – good stuff. I too suffer from hearing loss, and the older I get the worse it is for me to "get a grip on my problem." I've been a "rocker" for as long as I can remember. As a Golf Course Superintendent I stress the importance of hearing protection. I've been a "super" for more than 20 years. I'm 44-years-old and I can hear an owl from a half mile away but I cannot hear my assistant talking to me from the end of the lunch room table.

I too witnessed Pete Townshend and The Who – damn those lymie bastards... (Pat's line). I tell all my young guys once your hearing is gone, it's gone. Now when I use a chainsaw or even weedwack I have hearing protection on. The young guys are following my lead.

"We" cannot stress the importance enough. As always I'll continue to read my Golf Course Industry magazine from back to front.

Other strobilurin fungicides make you choose which defense to play: control of soilborne diseases or control of foliar diseases. Heritage® fungicide not only moves into leaves and sheaths upon application, but also moves from the soil into the roots and translocates upward where soilborne diseases begin. Studies prove that its degree of root uptake exceeds that of other strobilurin fungicides—like Disarm®, Insignia®, and Compass®—without compromising efficacy against foliar diseases. Defend against both with Heritage. To learn how, visit HeritageTurfDefense.com.
A path to follow

Wear areas made by golfers following the same line are common turf problems for supers everywhere. If you re-turf the area it looks good for a week. Roping off the area looks ugly and gets in the way of play. And redirecting traffic just moves the wear to another area. However, GCI's agent at work in the Land Down Under reports a possible solution.

"We have one area, a crossing between the bunkers on the 8th which has been a major problem since our bunker upgrade two years ago," says Peter Daly, superintendent at The McLeod Country Golf Club in Brisbane, Australia. "It is a high traffic area that funnels the traffic through a narrow pathway to and from the green. Consequently, any work done would soon be pounded into the ground."

Daly considered widening the crossing, but he believed a new track would be created as everyone tends to walk on the same line. Recently he came across Grassprotecta, a new product from Geofabrics. It is a heavy-duty and UV-stabilized grass protection mesh. The idea is to lay it on top of the turf and allow the turf to grow up through the mat creating a very strong stable surface. The mesh is designed so you can play a golf shot off it, and it will distribute the wear of the high amounts of foot traffic over the whole of the grid.

"The original path was dug away with all turf and topsoil removed, we shaped the sub soil surface to distribute any water into both bunkers to use that as drainage," he says. "We then brought in sand to widen and lift the crossing. This was put down in layers and packed tight, then another layer put on and packed and so on until the right height and width was achieved.

Well, five weeks later and the area is back in use. Daly is amazed at how well the matting distributes the wear. And once the turf grew through it was impossible to lift the matting. Most importantly, the golfers are happy and Daly even had some play a shot off it with no problems.

"Overall, I think this is a great solution to some of our areas," he adds. "It will be interesting to see this long term and also how it goes through winter as the couch is already slowing down its growth rate. But as a solution to traffic wear problems, the cost wasn’t too high and it was easy to put down and get back in play very quickly."

Grassprotecta, a heavy-duty grass protection mesh, lays on top of turf and allows it to grow up through the mat to create a strong, stable surface.
