get any moisture to move down. We always struggled to maintain a uniform moisture level,” says VanHerwynen, who spends about $10,000 per year on wetting agents. “It was not uncommon in July or August to have two guys out, about six hours every day on a regular basis, hand watering tees, collars and greens. I don’t know the percentages, but I know we definitely water less. It’s extremely rare when we hand water our greens or collars now.”

VanHerwynen has developed his own tricks to improve the use of his products. “I always spray LescoFlo in the rain. I know it sounds absurd. It’s not the most pleasant experience, but it works the best if you spray it while it’s raining and if you can get 3/10 inch or more of rain afterward. That’s ideal, because then it doesn’t have a chance to stick to the leaf blades at all, it gets through the thatch layer and into the soil. We’ve seen the best results by doing it that way.”

VanHerwynen has his own methods, too. “When we fill our irrigation system in the spring, we inject Dispatch while we’re filling and so when we test our irrigation system – that’s our first application of Dispatch,” he says. “It appeared that when we started doing it (the Dispatch application) right away in the spring, it really helped. Our heavy clay doesn’t drain well and we struggle with getting the equipment on the course without leaving tracks and a mess, so it improved that. In the fall, we blow out the irrigation system to winterize it and we put down two applications of Dispatch, back-to-back. It prevents standing water in the winter, before the ground is frozen.”

Brett Fleck, assistant superintendent at French Lick Resort, in French Lick, Ind., was also having problems with heavy clay soils, so he began using Aquatrols’ Revolution (on greens and back grass) and injectable Dispatch (wall-to-wall). “Revolution we do monthly and Dispatch we use on a 12-oz.-per-acre rate, weekly,” says Fleck, who uses wetting agents because of his course’s clay soil. “We have a lot of hills and dollys. It helps water stay on the hill a lot better and the valleys don’t stay as wet, so that helps. The Dispatch helps move the water through the soil better and we have some 90-year-old soil-based greens, so the Revolution maintains them and keeps the water where the course needs it.” Fleck spends about $8,000 a year on wetting agents and says his course has seen an improvement.

Brittany Schmigel is a contributing editor at GCI.

Lots of companies will try to sell you surfactants. But do they know what class of surfactant chemistry is in their products? We do.

Do they know which surfactant chemistry will give you the best results for your unique turf and soil conditions? We do.

Do they offer innovative, patented chemistries proven to provide superior performance in numerous university research studies? We do.

Our knowledge and 55 years of experience can help you choose the right surfactant chemistry to meet your agronomic situation and budget.
**Bulldog Water-Soluble Fertilizers**
- Complete range of water-soluble fertilizers designed to offer an integrated solution in fertigation, starting from the turf's need per phenological phase, including both macro and micronutrients, which contribute to an efficient nutrient absorption.
- Free-flowing, crystalline powder quickly and completely dissolves in water.
- 100% plant nutrient fertilizer is chloride free for immediate and predictable results.
- Can be mixed with other water-soluble fertilizers and compatible with many pesticides in foliar applications.

SQM • www.sqm.com

**SeaDwarf Seashore Paspalum**
- Drought tolerant warm-season turfgrass.
- Can be used on all playing surfaces of a golf course.
- Only dwarf variety of all the paspalums.
- Delivers fast green speeds and a distinctive bright green color.
- Irrigate with poor quality water.
- Treat weeds with ordinary table salt.

Environmental Turf • www.environmentalturf.com

**Cp33 Adjustable Liquid Fertilizer Injector**
- Injects a precise amount of chemical over a specific period of time.
- Runs off of water flow, not electricity, and can work with system flows from as low as 12 gallons per minute to virtually unlimited water flow.
- Injection control panel provides a visual indicator of the injection volume allowing for dynamic adjustment to the injection volume.
- Utilizes a unique diaphragm driven water motor and a hardened, positive displacement chemical pump ensuring a high level of accuracy.
- Unit's diaphragm water motor is unaffected by small particles in the water flow, such as sand, which scar pistons damaging competitive injectors.
- Injects chemicals into the water flow downstream of the injector, chemicals never enter the water motor, precluding it from damage.
- Installed using standard plumbing parts; typical maintenance doesn't require tools.

Chemilizer Products Inc.  
www.chemilizer.com

**John Deere Golf Aurora and Eaurora Controllers**
- Systems offer better communication allows for better control of water.
- Set precise run time applications down to the second instead of the minute, saving water and power.
- Internet-based central control system makes irrigation and water management available from any location via a Web-enabled device.
- Uses real-time weather data (ET) and transmits it to each controller in your network.
- Requires no expensive desktop software purchases or support.
- Eliminates need for dedicated irrigation computer and extended service plans.

John Deere Golf • www.johndeere.com

**Rain Bird Mi Series Mobile Controllers**
- Controller's range of usefulness is not limited by radio frequencies licensed for use only on the golf course.
- Controller utilizes the wide-ranging availability of the Internet over cellular networks, allowing superintendents to improve their team's productivity, enrich job satisfaction and increase the freedom with which they control and monitor their irrigation systems.
- Controller can be used from virtually anywhere superintendents or their staff may wish to monitor or control their irrigation systems.
- Superintendents can activate sprinklers and programs, review site status information, and directly edit the central control sprinkler and program data – giving while off site.

Fend Off Turf Diseases with Companion® Liquid Biological Fungicide

Companion® received a new EPA label for all turfgrass and landscape use. Manufactured by Growth Products, Ltd., Companion® effectively prevents, controls and suppresses a broad range of root diseases.

Several years of trials at Rutgers and the University of Massachusetts have shown that Companion® can be used in combination with lower rates of chemical fungicides for improved efficacy and/or in rotation with chemical fungicides, thereby reducing chemical applications and total chemical costs.

Companion™'s GB03 strain of Bacillus subtilis has multiple modes of action in preventing and controlling plant diseases. It produces a broad-spectrum antibiotic (lurin) that disrupts pathogen cell-wall formation. It is a competitive and fast colonizing rhizobacterium that crowds out pathogens preventing their growth and antagonistic effects.
SMART IRRIGATION

Prorain F3D And F4D Hose-Reel Irrigation System

- Designed with price in mind, without sacrificing quality
- Distributes water over 295-foot-wide strips, ranging from 1,375 to 1,900 feet in length
- Each model is equipped with BAUER's dependable pendulum equalizer, for maintaining a level sprinkler
- Corresponding wheel cart allows for a variable track width of 5 to 6 1/2 feet, while the four-speed gearbox and electronically controlled turbine ensure precise precipitation rates and optimum efficiency
- Mechanical and hydraulic swivel aids are available as options
- Can be equipped with under- and over-pressure shut-off valves
- Solar panels offered as a standard feature to power the Ecostar irrigation computer system

Rain Bird Eagle Series Rotors

- Rotors last up to ten times longer than the next best competing rotor
- Up to 23% more efficient than the competition in terms of distribution uniformity
- Deliver superior distribution uniformity, allowing for less water use while irrigating while still achieving the desired result
- Offers enhanced playability, reduced water consumption and bottom-line savings

Watermark Monitor

- Irrigation data management system automatically reads and records soil moisture trends
- Advances in communication technology allow access to the soil moisture information from remote locations via radio signal or an internet connected computer when using our cellular gateway
- Interpretation of the data helps managers schedule irrigation based on plant demand which can improve plant health, reduce water waste and runoff, and provide better control of pests and plant disease

Rainstar A3 High-Efficiency Irrigation System For Small Areas

- Precise, rugged and ideally suited for golf courses
- In one irrigation run, the sprinkler covers up to 230 feet side-to-side over a maximum irrigated length of 656 feet
- A second strip opposite the first area can be irrigated following the initial run, without having to change the position of the unit, providing efficiency and saving labor
- Features a galvanized pipe reel that swivels easily through 180 degrees, and can be assembled by a single operator
- Polyethylene pipe is available in lengths of 410, 492, and 558 feet with pipe diameters of 2 1/8 and 2 3/8 inches
- Rugged V-belt transmission drive is designed for three speed ranges
- At a working pressure of at least 3.5 bar, the A3 achieves precise flow rates of 21 to 88 gallons per minute
- Weighs about 1,150 pounds dry
- Equipment options include a speed indicator, an overpressure shut-off valve, a wide-area rain gun, and a special booster pump

Rain Bird Ic System For Golf Course Control

- Based on Rain Bird satellite technology
- Single station controller integrated with magnet assisted solenoid
- AC sub-30 volt system
- Classified as a low-voltage system under National Electric Code
- Real-time sub second communication
- Advanced diagnostic capabilities to troubleshoot field issues
- Unlimited activation capability
- Requires up to 90% less wire than a conventional satellite system
- Easier to design, install, maintain and expand

Golf Course Industry: The independent voice superintendents depend on.

In a recent industry survey, GCI was the clear winner read cover-to-cover among independent publications.

Golf Course Industry . . . Driving the business of golf.
Because lush and green should describe your fairways, not your ponds.

**AquaSpherePRO—Biodegradable**

The AquaSpherePRO is an all natural solution to treat ponds and lakes on golf courses. It uses a blend of natural bacteria and enzymes to improve water quality, clarity and eliminate odor. The AquaSpherePRO is the natural alternative to harsh chemicals.

Be proactive, deploy the first AquaSpherePRO when your water temperatures are 45 degrees and repeat every 30 days for a clean and clear Healthy Pond.

**100% Natural, Safe and Effective.**
Using less wire by getting straight to the point.

That's intelligent.

The innovative Rain Bird® IC™ System uses up to 90% less wire by directly linking your rotors and central control. The groundbreaking Rain Bird® IC™ System saves you time, money and labor by using up to 90% less wire than other control systems. Advanced diagnostics even let you troubleshoot from the convenience of your office. Proving less really is more. That's The Intelligent Use of Water.
Once you see our irrigation equipment perform, you’ll see the family resemblance.

Because whether it’s a controller with enhanced communications capabilities or an award-winning E-Cut™ Hybrid fairway mower, excellence is in the DNA of everything we build. Contact us for an irrigation demo. And see for yourself. **Consider us part of your crew.**

ROLL CALL

Pinehurst Resort, Village of Pinehurst, N.C., announced that Kevin Robinson has been named superintendent of Pinehurst No. 2.

Forsgate Country Club, Monroe Township, N.J., announced the addition of Scott Barnaby as head golf professional, and Mark Mazzola and Bobby Gage as golf professionals.

George W. "Buster" Bryan, a founder of both The Dunes Golf and Beach Club and Caravelle Hotel, and past PGA of America President Gary Schaaf of Murrells Inlet were inducted into the Myrtle Beach Golf Hall of Fame.

Chris Spencer has joined E-Z-GO as vice president, engineering.

Greg Nathan has been promoted to senior vice president, membership, of the National Golf Foundation.

UPDATE

Bad news from the world of South Carolina politics. The Creek Golf Club superintendent Weldon Davis lost his bid to run for a state rep seat in the June Republican primary. Opponent Eddie Tallon, a retired state law enforcement division agent, received about 80 percent of the vote.

GCI's Pat Jones threw the spotlight on Davis' march to the state capital in the May issue ("Run, Weldon, Run, page 66). At the time, Davis told Jones he had concerns that his opponent would outspend him in the days leading up to the primary, but he would not fight fire with fire. "I'm not taking money from lobbyists," he told Jones. "It's been offered, but I said, 'No thank you, sir.' When big money gets into small political races, they're going to want something sooner or later. That's what I'm running against, so why would I do it just to get elected."

Undeterred by his recent defeat, Davis says he plans to stay involved in politics.

CHECK THIS OUT!

Looking to jumpstart attendance at your next tournament?

Then you're going to want to check this out. I received this promo piece in the mail the other day encouraging me to purchase VIP ticket packages to attend the Bridgestone Invitational (Aug. 3-8) at Firestone Country Club, which is a chip shot to the south of GCI's global headquarters.

What struck me as super cool was that this flier was personalized. Sneak a peek at how they integrated yours truly throughout the marketing message. My name even appears on the sample scorecard. And now check this out, what was really neat was it looked like a personalized Web address for me to register and purchase my tickets.

So what's the take-away tip? It doesn't take a lot to get noticed. In fact, a little personalization could go a really long way in getting your next event noticed. - MZ
Tracking golf rainwear and windwear buyers

Customer profiles are important tools to drive revenue at any golf course facility. The National Golf Foundation released its "Golf Consumer Buying Profiles" last June based on a survey of 2,400 adult core golfers. The research was conducted in November 2008. Core golfers play eight or more rounds per year. Data is based on individuals who bought at least one of the following items in the past 12 months at any type of store.

GOLF WINDWEAR

- While golfers who maintain a handicap represent 37 percent of core golfers, they purchase nearly three quarters (73 percent) of all golf windwear.
- Golfers 18-29 spend 29 percent of all dollars spent on windwear. Likewise, golfers in this age group were 66 percent more likely to purchase windwear in the last year than total core golfers.
- 28 percent of golfers with an average score of less than 80 bought windwear in the last year.
- In contrast, 8 percent of golfers who report an average score of 100 or greater purchased windwear in the last year.
- Private club members were 33 percent more likely to purchase windwear in the last year than total core golfers.

GOLF RAINWEAR

- While golfers 60+ represent 27 percent of core golfers, they purchase nearly a quarter (24 percent) of all golf rainwear sold.
- Likewise, golfers who visit golf websites at least once a week represent 26 percent of core golfers, they purchase nearly two thirds (66 percent) of all golf rainwear.
- Golfers who play public courses spend 86 percent of all dollars spent on rainwear.
- Half of golfers who maintain an average score of 80-89 bought rainwear in the past year.
- Golfers with a total household income of $50,000 were 23 percent more likely to have purchased rainwear in the past year than total core golfers.
