High performance is in our DNA. Well, technically it's in our molecules.

Renown™ fungicide is the only product to contain the active ingredients in both Daconil® and Heritage® fungicides—the top two-selling fungicides in the golf market. Azoxystrobin and chlorothalonil have been optimally formulated to protect turf from root to leaf tip, even after heavy rain or irrigation. It's one economical, disease-fighting machine.

COVER STORY

14 SUPER SOLUTIONS
New “plant health” benefits are popping up on more product labels. GCI finds the new formula behind the trend.

FEATURES

20 PINK SLIP BLUES
Without a doubt, it’s going to happen someday. GCI’s Bruce Williams tells you how to prepare for your last day on the job.

Turf maintenance

42 COOLING OFF FOR FALL
Fall is the perfect time to tweak maintenance practices and tweak your turf before winter sets in.

Tree care

50 TREES BRING GREEN...
IN MORE WAYS THAN ONE
To find a balance between trees and turf on a golf course and maintain sustainability and budgetary goals, superintendents need to think like urban foresters.

Product spotlight

58 BATTLING SNOW MOLD
To combat snow mold resistance, superintendent Bill Stein investigates alternatives to his course’s traditional treatment.

Real science

60 BUFFER STRIPS, RUNOFF, AND LEACHATE
Research compares nutrient loading in runoff and leachate when buffer strips are used alongside golf course fairways.
YOUR COURSE. YOUR CONTROL. YOUR RESULTS.

The new Jacobsen® LF-550™/570™ Fairway mower assures you tournament-quality results regardless of operator.

Achieve greater control and better results across your fairways. The new Jacobsen® LF-550™/570™ features programmable controls, added functionality and simplified maintenance. Combined with Jacobsen Classic XP™ Reels, on-board diagnostics and versatility-enhancing accessories, you’re assured our legendary quality of cut regardless of who’s driving. Learn more, and request a demo by contacting your local Jacobsen dealer.

The exclusive electric hydro control with programmable speed controls is pass code protected, giving superintendents control over mow and transport speeds to assure optimal FOC.
SPOOKY

I used to hate Halloween. It always seemed to be a well-intentioned kiddie holiday that had devolved into an excuse for moronic behavior by grownups who believe it’s acceptable to drink until they puke on their shoes as long as they have a lame costume on.

In my days as a serious professional drinker, I considered Halloween (and it’s equally idiotic cousin, New Years Eve) to be amateur hour. I shunned those holidays in much the same way I avoid air travel during the summer when the entire Clark Griswold clan is almost certain to be in front of me in the TSA line at the airport or clogging the overhead storage bins with lacrosse sticks and skateboards on their way to a Wally World vacation.

(Grumpy Business Traveler Side Note: For the love of god, if you don’t travel a lot, try not to be an idiot in the security screening. Your little joke about having a bomb hidden up somewhere where the sun don’t shine will screw up both of our schedules. Seriously…) But, I’ve mellowed a bit with age (and nearly two years of sobriety, thank you very much) and I see Halloween in a new light. I now see it as a warm, wonderful event where I get to pollute other people’s kids with candy, ogle the occasional Naughty Space Girl… and find the premise for a column just as my deadline approaches.

So, here’s my Halloween-inspired column idea: Let’s look at the spooky season that just concluded and I’ll hand out an assortment of tricks, treats and lumps of coal to mark the occasion.

**Trick:** Mother Nature tricked us into thinking that the Northeast might have a decent golf year when the snow melted early and we had about a day and a half of nice weather in March. That changed pretty dramatically and spring was washed out. The real trick will be the unscrupulous few involved in the China golf development business who make it a habit of not paying for services provided by the designers, builders and agronomic consultants they have hired. Doing business in the “new China” shouldn’t be that scary.

**Treat:** Basic chemical manufacturers continuing to invest in R&D to prove plant health benefits beyond just pest control (see our cover story).

**Trick:** Archaic patent laws that only allow original manufacturers a few years to recoup those enormous R&D costs before others can bring similar products to market.

**Lump of Coal:** Activist groups that will use any tactic — including wheeling children with cancer into public hearings — to cast doubt on the safety of those products.

**Trick:** Using a weak premise like this to get a column done.

**Treat:** I worked in a “National Lampoon’s Vacation” reference for you. SCG
There's no 19th hole in your world. When the last foursome finishes you have to get ready to do it all over again tomorrow. And your Cushman Hauler will be right there with you. Available in a range of models to meet the needs of your operation, it features either a 48-volt electric drivetrain or powerful, fuel-efficient 13-hp Kawasaki® engine and payload capacities from 800 to 1,200 pounds. An optional limited slip differential provides better traction on wet or loose terrain while going easy on your turf. In a world that judges you by “what have you done for me lately?,” the Cushman Hauler puts it all in your favor.

LET'S WORK.
More turf wives

My name is Beth McDonald and I wanted to invite you to visit my Facebook page and blog, Turf Wives, which originated prior to Wives of Turf.

Turfwives Facebook page can be located by following this link (http://www.facebook.com/?ref=home#!/pages/Turf-Wives/157816847625604) and Turfwives blog can be located through this link: (http://turfwives.blogspot.com/2011/08/girls-nights.html).

In my first blog I discussed what lead to my idea and creation of Turf Wives – to give wives in the turf industry a safe place to share stories, support, advice and love with all the fellow turf wives – and girlfriends and fiancées of course. My page and blog are for all the ladies whose spouses, partners and even boyfriends work in the turf industry: consultants, R&D, developers, pro’s, superintendents, assistants, sales reps, etc.

My husband, Steven McDonald, is an independent turfgrass consultant who also has a strong focus on research as well as education. Since I’ve had the pleasure of meeting such a great deal of his clients, friends and supporters over the past 10 years, I’ve also had the great honor of meeting most of their wives which brought me to the realization that we’re all faced with many of the similar circumstances. My relationship with my husband is very strong and my hope is to encourage my followers to do a few small things during the difficult and challenging times to have similar success as my husband and I have.

Beth McDonald
Spring City, Pa.

It looks like the course owners are just trying to provide shade for golfers, but they’re really out to catch some rays. The giant panels covering much of the south portion of the parking lot are one of two solar arrays designed to turn sunlight into free energy for Stevinson Ranch in Stevinson, Calif.

“People don’t even realize what it is,” says George Kelly, course owner. “They think it’s just there for shade. But it really has been win-win.”

The course started using solar power earlier this year, with a huge investment in the arrays that will eventually pay for themselves in saved energy costs. The setup in the parking lot provides energy to the clubhouse and electric cart storage, while the second installation near the 17th green powers the course’s irrigation pump station.

“The key for us was the ability to finance this,” says Kelly. The whole project from installation to transition cost $960,000. And while a federal grant will rebate about 30 percent of that back to the course, the cost for responsible energy use seems steep.

But Kelly’s taking a long view of the cost and the results of a solar-powered golf course.

“This time of year, we saved just in this month about $12,000 on our energy because of the solar panels, and our payment on them is about $10,000,” he says. “That’ll flip when we go into winter for now, but there’s a high degree of probability that rates will go up over time. In seven years, when it’s paid off, we’ll be in a good position.”

Though the array is contributing to the course’s bottom line, Kelly says its impact is more about showing their commitment to making golf operate greener.

“It really makes a statement for people who drive in here and haven’t seen this kind of setup before,” says Kelly. “The fact that we’ve made a major commitment says something about what we’re trying to do.”

If you’re serious about your luxury golf carts, you may want to check out the newly-unveiled Garia Mansory edition, which premiered at the international motor show in Frankfurt this month.

The body of the high-end cart features carbon fiber – usually used in the motor sports and aircraft industries, and teakwood lines the cabin floor. Specially designed headlights, an air scoop and fender gills complete the design.

“When creating the Garia, we set out to build the best golf car in the world, teaming up with the most renowned suppliers in the automobile industry, and with the Garia Mansory Edition our connection to the automobile world is further strengthened,” says Anders Lynge, designer of the Garia.

The car comes as a collaboration between Garia and Mansory, which customizes supercars such as the Rolls-Royce, Aston Martin and Bentley, and is available as both street legal and non-street legal.

We at the GCI Intergalactic HQ don’t have all that far to travel between offices, but if someone felt like donating, it would make the trip that much nicer.
