have found that where you are isolated and perhaps considerable time away from supplies, that it is a very wise provision. We have found that when you need equipment in summer you need it very badly. We have also equipped our mowing and cutting machinery with lights which enable us when the peak load comes to work at night. This very seldom occurs, but we find it necessary to be prepared in case of a tournament, the Fourth of July load, the Labor Day load, and other peak loads.

**Keeping Dandelions Out**

We have made an arrangement for dandelions by taking an iron bar about 20 ft. long, joining it three times, making it flexible, and attaching to this a mat of wire netting. We then lay a few sticks of wood across this and fasten them with copper wire. We hitch these behind the tractors and go over the dandelions. We believe our method is the most successful one for the treatment of dandelions. We run this on the fairways, through the rough, and all over the course, and if it were not from the seed blowing from our neighbors and from the highways, we believe that we could eliminate the dandelion entirely.

**By An Eastern Green-chairman**

One who has been for 10 years the green-chairman of a noted New England course tells Golfdom’s readers of the headlights of his successful regime, asking that we refrain from using his name or that of his club. His interesting testimony runs:

Some years ago we began to establish turf nurseries which we have found very valuable. If a green shows signs of sickness our greenkeeper finds it more satisfactory as a rule to cut out the bad spots and replace with a few healthy sods rather than struggle with chemicals. We do use arsenate of lead and some other preventive measures at times, but with plenty of good turf in the nurseries we can, if necessary, returf an entire green during the playing season without seriously interfering with the play or incurring criticism from our members.
DOES YOUR GOLF COURSE NEED REMODELING?

We specialize in reconstructing courses for established clubs.

Courses Remodeled in 1929

- Brookwood C. C. . . CHICAGO
- Orchard Ridge . . . FT. WAYNE

New Courses Built in 1929

- Beverly Shores . . MICH. CITY
- Prestwick C. C. . . ORLAND, ILL.

National Golf Course Builders
202 South State Street, Chicago
Charles E. Maddox in charge of construction.

Budd Blades
Will make your mowers run easier, cut better and last longer . . . Will cut tough weeds as well as grass . . . Will cut at any desired height . . . Will eliminate reel grinding and mower sharpening . . . No attachments or extra parts needed . . . Much cheaper in the long run . . . Ask your supply man or write us for descriptive price list.

The Budd Manufacturing Co.
Ravenna, O. P. O. Box F.

America's Finest Golf Courses Use Lusterlite Tee Markers
-and yardage indicators. Brilliant white porcelain lettering on lustrous porcelain black enamel; weather and rustproof. Used on America's leading courses. Lettered to conform with any distances and pars. Write manufacturers of Lusterlite Enamels.

CHICAGO VITREOUS ENAMEL PRODUCT CO., Cicero, Illinois

The Peerless Lawnmower Sharpeners
Grinds all makes of Power, Horse and Hand Mowers in 20 to 30 minutes, with razor-like edge giving any desired clearance or bevel. Mowers run easier, require less power and gain in speed. One owner writes, "The Peerless Sharpeners saves us from $700 to $800 annually." Write for catalog and list of users.
The Fate-Root-Heath Co. 988 Bell St., Plymouth, O.

We find out the wishes of our membership by mixing with them and encouraging them to say what they like or dislike about the course. Sometimes their suggestions are good and sometimes unsound, so we do not make any material change in the playing area until we submit the ideas to the golf architect who first planned our course and who has supervised every alteration we have made.

Our finances are handled by an executive committee appointed by a board of governors. This committee is composed of the president, the treasurer, the chairman of the house committee and the chairman of the green committee and one other member of the board. We make up a budget based on the expenses of previous years and have frequent meetings to check up and see that we are not spending more than we can afford.

Study Markets
It is the duty of the green committee chairman to study markets for the seeds, fertilizers and tools which are needed and then in cooperation with the greenkeeper, to see that suitable materials are used.

We are fortunate in having a greenkeeper who handles his men well and keeps practically the same ones over long periods which, with good men, is a distinct advantage.

Any green-chairman who feels his responsibility to his fellow members must study and learn to keep up with all new methods, but should be very careful to avoid experiments on a large scale.

With good turf nurseries it is easy to try out in a small way some of the many suggestions available from the Bulletin of the U. S. G. A. Green Section, Golfdom and other publications devoted to the sport and business of golf.

First and last the men new to the job should learn to be patient with the members, the workmen and nature, not being too downcast when weather conditions are adverse nor too elated when the conditions are so favorable that the membership unite in praise of the work of chairman and greenkeeper.

Hyper-Humus
TRADE MARK REGISTERED
Recommended for topdressing greens. An ideal carrier for arsenate of lead, sulphate of ammonia, etc.
Write for particulars and prices.
HYPER-HUMUS CO., 51 Park Pl., Newton, N. J.
