son series in cooperation with pros also have made extensive use of this material which was compiled by Frank Sprogell, chairman of the PGA publicity committee.

A new feature of the PROmotion plan, put into effect this year, is a campaign directed to the heads of employee welfare departments of large corporations. The idea of the campaign is to get these executives to push golf play among their employees, thus making more instruction jobs open for pros and boosting play for daily fee and municipal courses.

Another bulletin has been sent out to high school authorities urging that prominence be given golf in the athletic programs of the schools.

Other PROmotion material will be issued from time to time during the summer. The campaign goes into its second year as the first planned, well-financed move to educate the public to the benefits of golf play and to the service of alert and well-qualified pros in bringing golf's benefits to adults and youngsters. The campaign serves as market extension and insurance for the game.

Inquiries concerning details of the campaign, or suggestions that might be applied in further PROmotion should be addressed to Herb Graffis, 14 E. Jackson Blvd., Chicago.

Many Improvements at New Britain, Conn., Municipal Golf Course

NEW BRITAIN, (Conn.) golfers who played the city's Stanley Golf course during the past two weeks noticed important improvements had been made on the layout, work largely the result of energetic plans formed last winter by Val Flood, veteran pro at Shuttle Meadow Club in New Britain. Improvements included the erection of a large maintenance and compost building and the installation of more than a mile of drainage canal in soggy areas near the 15th, 16th and 17th holes.

Flood, who has been very active in the work of the municipal course, designed the compost and maintenance building in addition to laying out plans for the drainage system.

The new building, which is valued at $12,000, had all its interior wood taken from a pile amassed when a barn estimated to be over 125 years old was torn down on another section of the Stanley tract. The stone used for the exterior was collected from a ledge near the course and

the labor provided by the WPA. The cost of the building to the city was only $800.

The drainage system is quite unique. Four-inch tile is laid in the bottom of converging ditches; the tile is covered with a layer of stones, then a layer of straw, then topsoil and turf. All clay dug out was carted away. The course will also have four new holes this summer to replace the 1st, 2nd, 3rd and 4th now in use, but they will not be officially used until July when the New England Public Golf assn. comes here for an annual tournament.

Children's Camps Are Opportunity—Something for golf clubs to look into as a possibility for adoption is the boys' and girls' camps for children of the members of the Denver AC. The camp is 42 miles from Denver and it is well equipped and operated. Its camp directors are among the best available for this work.
