**Green Section Plans National Tournament At Clubs**

A GREEN SECTION tournament is in prospect as a result of the planning done during the two sessions of the Green Section committee of the USGA held during the National Open at Philadelphia.

The national tournament idea which helped Green Section financing considerably in former days, calls for each entrant at the clubs holding the event to pay small entry fees, and the winners receiving official emblems. It is believed that the Green Section tournament idea, properly advertised on club bulletin boards and by other publicity of the clubs, will help to acquaint the golfing public with the tremendous extent and value of Green Section work. As it is now, many clubs receiving rich benefits of Green Section work are paying disproportionately small sums, or nothing at all, in return.

Cooperation of various regional amateur organizations, greenkeeper sectional organizations, the GSA and the PGA was pledged for making the Green Section tournament successful.

**Raritan Velvet Seen As Ideal Putting Turf**

ADOPTION by golf courses of Raritan velvet bent as a means of minimizing putting green complaints is envisioned at the New Jersey Agricultural Experiment Station, Rutgers U., New Brunswick.

Nor is optimism regarding the outlook for the new turf grass limited to its birthplace. Favorable comment was offered by nearly 200 greenkeepers at the recent Eastern Educational conference after viewing plots of the Raritan velvet bent grass, produced by Howard B. Sprague, agronomist, during 8 years of painstaking plant selection.

“This grass is the most valuable aggressive strain of the velvet bent species which we have had under observation here at the station,” Sprague commented in reply to queries for further information on the development. He added that “there will be approximately 4,000 lbs. of Raritan velvet bent seed produced in 1939, and perhaps another 10,000 lbs. of other im-
