(Continued from Page 40)

and then to locate a good nearby sponsoring club. In the South all that is necessary is to get Bermuda grass started. This can be done by planting stolons. The putting green can be made available by early spring, but the driving tee can be made available almost immediately. All that is needed is dry ground and some sand. In the North it will be necessary, if putting greens are to be available this summer, to get the clubs to provide ready-made turf from their nurseries. If turf is not available, it can be purchased from people who might have a lawn for sale.

"To my mind the one controlling thought to keep in mind about this whole thing is the fact that a great deal of money is being raised to entertain soldiers and sailors in the cities and in the towns, but for every soldier boy seen on the streets of our cities, there are probably ten out at some camp who cannot get a pass to leave the camp or who haven't the money to go outside.”

Ranges for Servicemen

Almost daily the war makes new demands on industry, so it is natural that Deepfreeze, producer of domestic quick-freezing apparatus, should be called upon for commercial development in this field. The original home type Deepfreeze food storage unit, designed and patented by W. L. Morrison, is now sold in great numbers. The Santoeel Deepfreeze is a unit of similar capacity and construction used for commercial purposes, such as the chilling

Almost daily the war makes new demands on industry, so it is natural that Deepfreeze, producer of domestic quick-freezing apparatus, should be called upon for commercial development in this field. The original home type Deepfreeze food storage unit, designed and patented by W. L. Morrison, is now sold in great numbers. The Santoeel Deepfreeze is a unit of similar capacity and construction used for commercial purposes, such as the chilling
of aluminum rivets and shrinking of metal parts. Temperatures as low as minus 80° Fahrenheit can be obtained.

Recently Morrison and his staff of engineers built a specially designed Deepfreeze unit for testing the hydraulic mechanism used on retractable landing gear of aircraft. Another new development is a Deepfreeze unit for the storage of blood being donated by thousands of generous citizens to produce the so-called blood plasma banks.

A specially designed delivery truck for frozen foods is also on the market, and is being manufactured by the Henney Motor Company of Freeport, Illinois. Dealers will find in this vehicle a swift, safe method for delivering frozen foods to consumers. The body has twin sections of food compartments mounted one on each side of the chassis, with service isle between.

Each section contains a battery of four Deepfreeze cylinders. Sub-zero temperatures are maintained by a small gasoline compressor. A 36 cubic foot capacity model on a conventional chassis is here pictured. A 77 cubic foot cab-over-engine model and a dual purpose express model with a double Deepfreeze unit is also available. Descriptive details may be obtained on request by addressing Deepfreeze, 2313 Davis St., North Chicago, Ill.

The North & Pfeiffer Mfg. Co., makers of Grip-Rite removable Shu-Spikes, announces that wise pre-war purchasing has permitted them to come up to the 1942 season with a supply of Shu-Spikes sufficient to last through the current season, but urges golf pros to order promptly inasmuch as metal items are on priority. New address of the N. & P. Company is P. O. Box 1144, Providence, R. I.

According to S. I. Strickhouser, manager, golf ball development, United States Rubber Company, a question now often asked is how long will a stock of golf balls keep their bounce and resiliency?

"During the first year some discoloration of the surface paint is bound to take place," Dr. Strickhouser said. "The balls will become slightly yellow, but this will not affect performance. During the second year golf balls will lose some resiliency. This will not be appreciable and cannot be avoided. Golf balls are wound with rubber thread under great tension. Eventually the rubber becomes set to some degree. However, a good quality golf ball, with proper care, should give the average golfer nearly as good a game at the end of two years as the day he bought it."

"Keep surplus golf balls in the original box they came in or in their individual wrappers of containers in the golf bag," Dr. Strickhouser advised. "That will keep them from the light and dirt. Then put the box or bag in a cool, dry place. Other rules to remember are: Buy a recognized brand, with tough, durable cover. Take lessons from your pro to learn more accurate hitting. Keep your ball clean of grit, but do not wash it in hot water. Use old balls for practice."

A light and practical golf bag stand under the trade name Clipon—the silent caddie, is an item that promises to take the backaches out of the play without a caddie, and should prove a welcome new item for dealers and pro-shops.

Clipon stands attach easily with springs over the rim of any standard golf bag—round or oval in shape. The stand can be left on the golf bag as a permanent fixture, folded flat against bag or taken off in a jiffy. Clipon weighs about nine ounces, which is half the weight of one golf club. A short piece of chain connected with cotter pin to the bag, limits the spread of the stand and gives it firmness even on hills, through rough and in the locker-room. Molded rubber feet and a rustproof finish make these stands attractive.

With Clipon holding the golf bag about 30 inches above the ground, a golfer can select his or her club, play the shot—and without bending down, lift the strap of the golf bag over the shoulder and go on for the next shot. To fold Clipon stand flat against bag, you simply push the loop down, pressing the legs of the stand together. This is for extra convenience in carrying or for storing in locker. However, during play the stand can be left swinging open; the check chain limits the swing and will hold the stand always in the right position when setting the bag down.

Another advantage is the saving on wear and tear on equipment. Clipon stands eliminate that unsightly heap of valuable golf equipment, often lying on wet and dirty ground. Caddies will learn
to appreciate Clifton stands because it takes the load off their back while waiting at the tee or tending the flag on the green.

Clifton—the silent caddie—bag stands are made in two types, the popular model listed at $1.50 and the heavy duty deluxe model selling at $2.25. Further details may be obtained by writing the Clifton Mfg. Co., 507 Fifth Ave., N. Y. C.

En-Tout-Cas America, Inc., 630 5th Ave., New York, N. Y., tennis court construction and operation authorities, offers to country clubs a free advisory service on court maintenance problems, and will be glad to answer queries about surface materials, drainage, etc. The company suggests that a photo of the courts, taken from a spot high about the courts, frequently permits a quick and sound suggestion for improvement. There is no charge or obligation involved in making such inquiries.

The company has installed courts at many country clubs and reports that club officials are preparing courts for unusually large play expected in view of the growing accent on physical fitness.

WANT ADS: Rates, 10c Per Word—Minimum, $2.50

Wanted—Assistant pro-caddiemaster. Immediately. Must know club repair work, and will supervise caddie room and other facilities. For young man. Apply: Riverside Golf Club, Riverside, Illinois.

Golf Balls. We buy used and cut golf balls. Pay highest market price. Write what you have to offer—any quantity. Kansas City Sport Goods Co., P. O. Box 35, Kansas City, Mo.

Experienced pro-greenkeeper with excellent record and highest recommendations desires change of location. Active, competent, dependable man. Above described. Desires number and skill in maintaining courses on thrifty budget and a good instructor and business man. Please advise length of season, salary and earning possibilities. Address: Ad 301, % Golfdom, Chicago.
