Single with a large bag received $2.50. Why such wages? Well, when we had an event we would ask the girls to be sure to arrive as we had to have them. We would ask 50 to be here and believe me 50 would arrive. Do you think that after 18 holes they would leave for home? Not on your life. They would stay for 36 double and after finishing 36 they would chase balls for members' late practice. At this day and age show me a boy who would go another 18; very few, and then chase balls afterwards. The girls became “pets” here and were usually called by their first names. A number of them were in demand so that we had to cut out the steady business to keep the other girls from harping on this subject. We ended with 40 girls and up to November we still get around 35 on Saturdays and Sundays.

We have suitable facilities for them. They are kept in a certain section away from the few boys we have here. They dress well, are neat and clean, are willing to do anything that is asked of them. They sweep walks, rake paths, wash windows around the shop, and we don't ask them for this aid. They just want something to do to pass the time until play arrives.

As long as I am employed here I shall continue here with them and will try to increase it up to 100 next year. As a matter of fact the members don't want boy caddies, so that is that. I would suggest to other clubs to try this solution and will wager that after two weeks they will be surprised. It can't be beat.

That is our solution here and hope this might help some other pros who have had a devil of a time with this problem.

**Andy Invents Club-Gripping Gadget for GI Amputees**

By SID VAN ULM

The guy couldn't cut a straight line, or bore a hole or build a chicken coop, but he is an inventor and as a result of his knack of making gadgets a lot of disabled veterans are going to be able to do many things better when they get out of the hospital.

The guy referred to is Andy Anderson, half-pint sports editor of the Houston Press who has toured more than 70 hospitals on his own organized rehabilitation plan. His first gadgets concerned his first love in sports, fishing. They worked—a special handle to allow a boy minus his right arm to use his prosthesis in winding a reel and a belt-and-rod attachment to allow a boy minus his left arm to handle a rod as good as a two-armed man.

Andy has been the father of the 9-hole golf course recently dedicated at McCloskey general. Sam Snead and Vic Ghezzi helped dedicate the nine hole layout. While helping build it Andy watched some of the one-armed kids plodding over the course and decided then and there that they could hit with two arms if some sort of an attachment was devised. So he went devising. Assisted by Sgt. Norman Bromel, who lost his left arm in Germany, Andy worked out a special grip with a thong attached that allowed the boy to get his “working hook” into the

Private Dick Grasser, who lost his left arm, examines the gadgets with Andy Anderson in the center while Norman Bromel, who lost his left arm, shows how the gadget is attached and prepares to use it. In the case of boys who were right handed and lost their right arm Andy encourages them to learn to play left handed for eventually they have to learn to do everything else left handed.
Acushnet "Pro-only Policy" to be Continued

★ New Bedford (Mass.) Standard Times, in home town of Acushnet Process Sales Co. recently reviewed Acushnet's "pro-only" policy, saying:

"August 1935, Acushnet inaugurated its 'sold-through-Pro-Shops-only' golf ball policy. From this policy the company has never since departed, except to supply rehabilitation centers by government order.

"Acushnet's decision was a tough one to make. It meant the cancelling of many valuable contracts. It meant the sacrificing of carefully accumulated goodwill. Further, it entailed the responsibility of turning out golf balls of such uniformly high quality that pros would not only be justified in endorsing them, but would push them enthusiastically to their members. It implied the heavy and difficult obligation of protecting every pro on every Acushnet golf ball made, against price-cutting, bootlegging, 'gifts', 'practice' balls and black-marketing.

"But Acushnet was strong in the conviction that the men who do the most for golf should get the most from golf; and that the men who know most about golf balls are the men who should sell golf balls. On that conviction, Acushnet gambled its future business. Without the pros' active and continuing support, this departure from tradition could mean only disaster. It needed all the help the pros could give it to win. And the pros gave it.

"The rest is history. Pro-interest increased. Goodwill for Acushnet grew. The public caught the idea through national advertising and acted on it in ever greater numbers. Sales increased greatly—for both manufacturer and pro—and never, up to Pearl Harbor, suffered a setback.

"Even Pearl Harbor, and the rationing, restrictions and regulations which followed, had no effect on Acushnet's pro-only rule. All through the war years Acushnet made and reprocessed what balls they could as well as they could and sold them—'through Pro Shops only'. Now that synthetic has been released for golf ball manufacture, Acushnet is making the best synthetic balls it knows how and selling them—'through Pro Shops only!'

"Now that peace is with us again and a real golfing boom with hundreds of thousands, perhaps millions, of new players eager to tee off, the temptation might seem great to let down the bars and let 'em roll—high, wide and anywhere. But it's not a temptation that Acushnet will fall for. The pro shop will continue to be the only place a player can buy a ball with the name Acushnet on it, legitimately—and no balls made by Acushnet will ever carry any other name."

★ PINEHURST GOLDEN JUBILEE — Pinehurst, N. C. observes its 50th anniversary this fall. Among other features of the celebration is the 43d annual North and South Open championship. History of the world-famed golf resort is being told in special editions of the Pinehurst Outlook, published by Robt. E. Harlow.

★ HORTON RESUMES CLUBMAKING — Horton Mfg. Co., Bristol, Conn. began production of its new lines of clubs Oct. 1 and expects to be in full operation by Jan. 1, 1946. Plant was a big producer of war material.
