MILORGANIZED TURF GROWS BETTER LOOKS BETTER

Fairways, greens and tees fertilized consistently with MILORGANITE, the natural organic nitrogen plant food, are distinguished by rich, deep green color, uniform texture and a healthy, closely knit root system. "MILORGANIZED" turf resists disease and withstands many of the climatic rigors to which less sturdy turf succumbs.

These are reasons why Golf Clubs use more MILORGANITE than any other commercial fertilizer. Our Soil Testing Laboratory and Turf Service Bureau are available to you upon request.

For strong, healthy growth, the dietitian (greenkeeper to you) must furnish greens with properly prepared food and at proper intervals. Compost prepared with a Royer Compost Mixer supplies such fare. Perfectly shredded and blended, fluffy and trash free, Royerated compost spreads rapidly and evenly, holds moisture longer, quickly yields its nutritional elements. And it saves labor, too . . . up to 89% of the time used in manual preparation.

Same Height, but...

Yes, two golfers may be the same height, but one will have a long waist, long arms and short legs. Another may have a short waist, short arms and long legs. Obviously the same suit of clothes or the same set of golf clubs would not fit both men.

That's the reason more and more golfers are turning to Kenneth Smith woods and irons. They're handmade to each player's natural swing and physical characteristics, scientifically balanced and identically swing balanced. No other clubs are so made and so balanced.
