a newcomer in the turf fungicides, proved fair, while Actidione and Cadminate gave no control.

Meling-out (Helminthosporium), which seems to be getting more serious in a number of sections in the country appeared in test plots in only Michigan in 1952. Dr. Vaughn had extremely good control only with Actidione while Calo Cure, Tersan and Tat-C-Lect showed only fair.

Copper Spot was serious only in New Jersey where our tests showed Calo Clor, Calo Clor + Tersan, PMAS, Puraturf, Crag 531 and Cadminate gave satisfactory control. Low rates of Calo Cure, Calo Clor and Tersan, plus standard rates of Orthocide 406 and Actidione gave poor control. It was of particular interest to us that while ½ the standard rate of Calo Clor or Tersan gave very poor disease control the combination of these two at the ½ dose rate gave exceptional control — better than either one at the standard dose rate.

Report from England

We welcome into the 1952 project a report from England where Dr. Smith reports upon a disease which is not usually too severe in the United States, but does give us considerable trouble on occasion. His data on Red Thread (known to some of you as Pink Patch) show excellent control with Tersan, Crag 531, a mixture of Malachite Green and Bordeaux Mixture, and a copper material new to most of us known as Coppyr. Very good control was also obtained with Puraturf.

Finally, I would make this comment. It is occasionally heard around the clubhouse that “from the looks of the greens they must have a plumber acting as the greens superintendent.” May I say that this statement can no longer be based upon fact. First, the plumbers nowadays are getting such high wages that no club could afford to hire one for the salary they pay their greens superintendent and second, no plumber is smart enough to handle all the problems in the fast moving world which is the domain of the golf course superintendent.

American Playground Restores Nahma (Mich.) Course

When the American Playground Device Co. purchased the former sawmill town of Nahma, Mich. in the fall of 1951, the Anderson, Ind. manufacturer of swings, slides and other recreational equipment also bought 4,300 acres of wooded land, including a 9-hole golf course.

American has installed its swings, slides, see-saws and Castle Towers at many golf clubs and now can show its playground equipment, park benches and picnic tables on its own golf course.

The Bay de Noquet Co., which had engaged in lumbering operations in Upper Michigan since 1881 and whose Nahma mill sawed its last log on July 26, 1951, built the Nahma course in 1927. The site was an 80-acre farm, where the company pastured the horses used in its early day logging before the advent of truck and tractor.

The idea for a golf course in a sawmill town of a few hundred inhabitants developed from the enthusiasm for the game displayed by Dr. Ferris Summerbell, then the company physician, William H. Acker, company manager at Nahma, and Pearce Cameron, manager of the community’s only general store. The trio played golf whenever they could get away to the Escanaba CC, 35 miles from Nahma. But finding the distance oftentimes inconvenient, they improvised three holes at the Nahma baseball field, where they practiced for a couple of seasons.

Supported by interest shown by other Nahma residents, they induced the Bay de Noquet Co. to transform the old company farm into a course. A club was organized, and at one time it had nearly 50 members, including some residents of nearby Manistique and other communities. After the sawmill ceased operations in 1951, membership declined. Now efforts are being made to obtain new members. It’s a bargain. Membership fees are only $10 per year. Wallace Bennette is the acting secretary.

Course “Good Selling Point”

The golf course always was maintained in good condition by the Bay de Noquet Co. Charles E. Good, president of the lumbering firm, always felt that the golf course would be a good selling point whenever the company was forced to suspend operations because of a vanished timber supply.

Since it was acquired by American, the Nahma course has undergone a number of improvements.

When the course was built, the entrance and No. 1 tee were located at the south end. A few years later, it was relocated at the north end of the course. This year, the fairways were restored to their original numerical order.

A parking lot was established and a white-painted gate erected at the south end of the course, not far from the relocated No. 1 tee. Comfort stations were installed and other improvements made.

Another shelter is planned near the No. 1 tee to supplement the present shelter midway in the course. The latter, inci-
dentally, was originally a sizable play-
house which was once the prized child-
hood possession of the daughter of one of
the lumber company’s executives.

Les LaBumbard, greenkeeper for 10
years, was busy with helpers last sum-
mer putting fairways, greens and tees in
good shape. A water system, operated by
a Fairbanks-Morse pump, keeps the
course adequately irrigated.

American’s course is located amidst the
pines and hardwoods along the scenic
shores of Big Bay de Noc, about a mile
northeast of the town, along County Road
495. Although laid out mostly on level
ground, it is quite a scenic and sporty
course. Glimpses of the waters of Big
Bay de Noc are afforded golfers through
openings in the woods along the shores.

Par for the 2,836 yds. is 36.

In addition to the golf course, Ameri-
can is rehabilitating the entire town of
Nahma. The one hundred homes are be-
ing repaired and repainted white with
harmonious trim. The Nahma Hotel also
has undergone extensive exterior and in-
terior improvements. Rustic lodges on the
sandy beaches have been enlarged and
modernized, so that each has two well
furnished bedrooms, living room with an
artistic fireplace, kitchen and bathroom.

Ultimately, American will establish a
branch factory in Nahma for the manu-
facture of its large line of park, picnic,
playground, swimming pool and dressing
room equipment. Its objective: To make
Nahma a model community, where the
people will enjoy good working condi-
tions and play at golf, hunting, fishing
and other outdoor pastimes in the great
American Playground that surrounds the
town.

STANLEY KAYE NOW
WITH VAUGHAN’S

Charles F. Keegan, Gen. Mgr., Vaughan’s
Seed Co., 47 Barclay Street, New York
City, announces that Stanley Kaye has
been added to their sales force covering
golf courses, parks and cemeteries. Kaye

10-8-6 Liquid Fertilizer PLUS
CHELATED IRON COMPLEX

PREVENTATIVE AND CORRECTIVE
treatment for white or yellowed
turf due to IRON CHLOROSIS

Try it on Your Problem Green!

ECONOMICAL
Fertil-Ade No. 2 offers economical in-
surance against yellowed turf caused by
iron chlorosis. Under most normal turf
conditions one treatment lasts for the
complete growing season.

EASY TO APPLY
As a true liquid fertilizer, Fertil-Ade
No. 2 can be applied with a power
sprayer. Does not interfere with play.
Will not burn.

LARGE AREA COVERAGE
One gallon treats 4,000 sq. ft. of green
or tee.

5 gallon pail — 20,000 sq. ft. $ 13.75
25 gallons — 100,000 sq. ft. $ 62.50
50 gallons — 200,000 sq. ft. $112.50
Fertil-Ade No. 1, without Chelated Iron
Complex — 50c per gallon less.
