1956 HIGHLAND CADDY

COSTS LESS ... YET OUTPERFORMS 'EM ALL!

You don’t pay for unnecessary frills!
The 1956 Highland Caddy Electric Golf Car is soundly designed to give you a comfortable easy ride with plenty of power when you need it. Reserve power gives over 36 holes on a battery charge and there’s no unnecessary weight to “drag” on your power. Extra rugged for trouble-free operation ... simple design for easy servicing.

AND IT SELLS AT A NEW LOW PRICE!

ALL THE FEATURES YOU WANT:
- Powered by four “Mr. Big” 165 A.H. Batteries.
- Fool-proof automatic 25 AMP battery charger.
- Simple electrical system contained in one unit.
- Comfortable All foam rubber seats for two.
- Rugged all welded steel construction.
- Wide base 6.00 x 6 cushion tire.
- Safe sensible speed of 10 MPH.
- Every component easily replaceable.
- Heavy duty automobile type differential.
- Your choice of 3 vivid colors and a canopy if you want one.

Write: HIGHLAND CAR CO., Box 2222, Dept. A, Jackson, Miss.

The organic fertilizer in the fall is best? I am not aware of any data to support that procedure. We have seen many good results from heavy late fall application, especially in the way grass starts strong early in the spring and recovers from injuries.

Regular applications of organics right through the season have become routine procedure. It’s possible the practice to which you refer may have been done on some basis with which I’m not familiar. Further discussion would be most helpful, but you neglected to sign your letter and gave no address.

Q—Please examine samples of soil and sand I am sending and give me your opinion of the best mixture for topdressing my bent greens.

(A) The soil appears to be dry loam with good physical structure. The sand is graded from coarse to fine, but most of it is what I would call coarse. This is good. With a good grade of peat or well decomposed sawdust on hand, I would suggest this mixture:

- Sand, 7 parts by volume
- Clay loam, 2 parts by volume
- Organic material, 1 part by volume

I am sure that you will be much better satisfied with this mixture if you can make it up a year ahead, treat it for weed seeds (sterilize with cyanamid or methyl bromide), and let it develop a “bond” between the particles. This will give the micro-organisms a chance to operate and develop some aggregates before you use it. It will be best if you continue to use the same mixture year after year.

Q—Would you give us your solution to hard greens? Our greens will not hold a shot unless they have been soaked with water. It is the opinion of several members that an aerifier would solve our problem. (Ala.)

(A) Your members who believe in aerifying are to be commended. It will help in a large way but it is not an end in itself. You need also to grow roots so as to have a cushion of turf which will hold a shot. To grow grass it takes regular adequate feeding and sensible watering. Aerifying helps in several ways; it loosens soil mechanically, thus making it softer and better able to hold a shot without being soaking wet all the time: it lets air, water and fertilizer deep into the root zone, thus helping to grow roots and well cushioned turf.

If you would send me a sample of the soil in your greens I could give you a more accurate answer on how and when to aerify and what to add after aerifying. Please tell me something of your fertilizing program and the kind of grass you have on the greens. You should know by now that I am a staunch advocate of using the right grass and feeding it adequately.

I might add that the excess moisture in the soil, designed to help soften the soil to hold a shot, actually works just the other way, making the soil harder. Grass roots need lots

of air. Without air (drowned) they suffocate
and can absorb neither water nor fertilizer.
Not only do the roots drown but they starve
and die of thirst.
My suggestion is to aerify in four directions to
get thorough cultivation. Revamp your fertiliz-
er and water program and repeat the four-way
aerifying each month until you can let the
greens go a week in dry weather with no irri-
gation and have them hold a shot perfectly.
We can go into details when I see some of
the records of your operations. A soil analysis
report also will help.
Q—Do you think our club should finance
trips to turf conferences for its supt.? (Va.)
A—The best answer I can give is a direct quote
from the Mid-Atlantic News Letter for May,
1956:
"Any supt. who misses these conferences is
not doing justice to his club; and any club
that does not send its supt. to the conference
is not doing the right thing in the best in-
terests of its members!"
Q—We have inherited a large supply of dinitro-
sec-butyl-phenyl (dinitro-ortho-secondary-butyl-
phenyl) (DNSOBD) 6.9 per cent petroleum oil,
79.7 per cent, remainder, inert. What is the
recommended dosage and usage?
A—The answer to this one comes from John
Gallagher, American Chemical Paint Co., Am-
bler, Pa.:
This combination can be used safely only
where complete kill of all vegetation is de-
sired, such as driveways, sand traps, etc. There
would be no selectivity. It is recommended
that it be used just as it comes from the can
the same as you would use an oil spray.

Byes to Low Qualifiers
Orville Chapin, pro at Ft. Wayne (Ind.)
CC, remarks that the customary method of
allopping byes isn't logical — and there are
many golfers who will agree with him and
approve a change.
Chapin says:
"A qualifying round is a process of elim-
ation; the weaker players are thrown out.
My idea of the present method is that the
better player is at a distinct disadvantage.
For instance in a Flight of 32 where only
28 players compete the four lowest quali-
fiers have to play two rounds to get to the
quarter finals whereas the 13th, 14th, 15th,
and 16th qualifiers only have to play one
round to enter the quarter finals. In such
a case four of the higher qualifiers have
an advantage because of inferior play in
qualifying.
"My idea is that any byes should be dis-
tributed to the lowest qualifiers. That is,
if there should be four byes they should be
allocated to the four lowest qualifiers."
